Requirements

Please refer to the *ANCILE uPerform™ 5.10 Technical Specifications*.

Installation, Upgrade, and Configuration Notes

1. The patch requires “administrator rights” to run.
2. The patch only applies to ANCILE uPerform™ Server version 5.10.

Bug Fixes

Documents

1. Get Latest Version does not work if the filename contains an ampersand '&'. (UPS-11418)
2. Hit counts are missing after upgrading from uPerform 4.2 or earlier to uPerform 5.1. (UPS-11414)
3. Dynamic folders do not return the correct results if filter contains a hyphen. (UPS-11426)
4. When using the get Latest Version option, double-byte characters are removed from the filename. (UPS-11417)
5. Disabling the description property in template does not remove descriptions on checked-in documents. (UPS-11396)
6. Debug messages are improperly logged on the CollabConsole log file when assigning website context. (UPS-11401)
7. Some end user notifications are not sent when the website context is removed from a document. (UPS-11380)

Glossary

1. Definition suggestions may not be displayed when suggestions have the same context for multiple languages. (UPS-11453)

2. Glossary searches with lengthy search strings will not return results. (UPS-11455)

Projects

1. Double-byte characters in project, folder names and other locations are not displaying correctly (D-02437)

Publishing

1. Unexpected end of file error resulted in publishing errors on the server. (D-02485)

Reports

1. Reports display users' My Favorites paths in Website Contexts if a Web Folder is added to Favorites. (UPS-11450)
2. Document Status field not added to Document Tracking Report after upgrading to uPerform 5.1. (UPS-11467)
3. Once an error occurs contacting the search server, the Project Status refresh link improperly displays a cached error message rather than the results. (UPS-11448)

Upgrade

1. The Run Once page does not complete if the search server is unavailable or misconfigured. (UPS-11469)
2. IIS port reverts back to "80" after patch installation. (D-02435)

Search

1. CSH searches do not correctly return documents containing multiple transaction codes. (UPS-11451)
2. A Solr out of memory error occurs when indexing Office 2007 or 2010 format documents (.docx, .xlsx, .pptx). (UPS-11493)

Security

1. A phishing exploit is possible due to return parameter security flaw on the website. (UPS-11457 & D-02504)
2. Using a port other than 80 resulted in a 404 error (D-02505)

Skins

1. uPerform Skin 03 and 04 Buttons, Tooltips, and SlideOut bar missing in Compatibility Mode for IE10. (UPS-11473)

Users

1. Newly synchronized users existing in multiple filters will only be added to the first filter. (UPS-11464)
2. If user attempts to edit User ID resulting in duplicate User ID, the user is not notified of conflict. (UPS-11459)
3. User logins fail if a security policy prevents user accounts from querying the LDAP server. (UPS-11463)
4. When using SiteMinder, the uPerform lock account functionality does not work properly. (UPS-11449)

5. Unlock user functionality fails when the minimum password length setting for a user is larger than 10 characters. (UPS-11452)
6. Synchronization from large user sources takes an unacceptable length of time during initial processing. (UPS-11466)
7. The admin user's time zone cannot be updated. (UPS-11454)
8. Locked out users are not redirected to locked out page. (UPS-11485)
9. LDAP login fails when Base DN requires characters to be escaped. (UPS-11481)
10. New synced users, or the admin on a clean install, may not be able to continue past the page where they select their language and time zone. (D-02438)
11. Subsequent synchronizations of users take a long time (D-02494)

Workflow

1. Clicking on the confirmation OK button multiple times to start a workflow adds multiple tasks. (UPS-11460)
