

# 13 Foot Long Loads!

**No more hand strapping and hand wrapping. Stretch Wrap Systems provides a faster, easier wrap.**

The operator sets the long loads on the turn table and pulls the cord to start. An upgrade to a 72" turn table balances the oversized pallet. At the end of the wrap cycle, the operator cuts the film and places it in the film clip, ready for the next load. A 30" carriage wraps the pallet more quickly and better contains the loads, while using less film than a 20" carriage would. A scale can be added to wrap and weigh in one step. Top Sheet Selector and storage rack are available. Banding film is also an option.

Banding film means no more film breaks! The reinforced laminated banding film eliminates corner boards and strapping. Provides outstanding containment including the middle of the pallet where "Force-To-Load" is typically weak. Partially unwrapped pallets retain containment force. Tie your loads to the pallet. This is an excellent solution for beverages, pails, bags, uneven loads, bricks and blocks, high puncture hazard loads, and other difficult-to-wrap products.
