

PHS West Scavenger Hunt Clues

CLUE #1:

In 2010, Pennsbury's team was blessed,
With a transfer from Tennessee of all places... who would have guessed?
This interper and orator couldn't be with us today,
She was such a hard worker, though, and ended up getting 2nd in OO at NSDA (in 2011).
While she isn't here, her mom made the trip,
She can always be counted on for a clever quip!
This Pennsbury alum parent holds the key,
Her first initial indicates the hallway where you need to be.
Take a picture of this judge, and you're on your way,
To solving this riddle and having a fantastic day!

CLUE #2:

Our PFI Tournament Director (a Pennsbury alum) is quite the maven,
Even though he is now the head coach of the team from Strath Haven.
Throughout the tournament, he can be found wandering the halls,
Usually putting out fires or responding to calls.
This is your first clue to the number of the room,
Failure to figure it out could spell your doom.
But don't fret, it will be easy to prove your worth,
Just use the number associated with the month of his birth.

CLUES #3 and 4:

Pennsbury High School West (where you are right now) is a maze that makes most look like
fools,
It is actually the combination of what was originally two separate schools.
Within each section is the original date stone,
A picture will be needed with your trusty personal phone.
The buildings were opened in different years,
It was the joining of the two that caused many to break down in tears.
To solve this riddle, it won't take much deduction,
Just add together the last two digits of the years of their construction.

CLUE #5:

One last poem to round out this test,
If you can solve it, you really are the best!
The Pennsbury Speech and Debate Team has been in existence since the mid 1960s
60+ years of history warrants a little trivia, if you please.
Most of the current team wouldn't know the answer to this clue,
So you'll have to find someone older, one with knowledge true.
Find an alumnus that's part of the speech tab staff under 5 feet tall,
Take a picture of her, and she's give you the answer as she's on the ball!
(just don't startle her, as she's prone to fall)
The number of head coaches who have led the team is what you need,
The final piece of the puzzle to cement your lead.
Now combine the answers as if you were in an actuarial mode,
To determine the location of the hidden QR code.
