## Apk downloader chromebook

The best Chromebooks can deliver a world-class computing experience in 2020. They are perfect for students, grandparents and anyone looking for a problem-free laptop with a long battery life. We've reviewed and evaluated the best Chromebooks so you can find the best value on any budget. Our buyer's guide will help you find the perfect Chrome OS laptop or tablet if you switch from a Windows or Mac, or if you buy your first laptop entirely. The 10 best Chromebooks in 2020

Lenovo Flex 5 Chromebook - Best Chromebook Overall: A powerful, portable and almost perfect all-around Chromebook for students, travelers, business people and Chromebook users every day. Acer Chromebook Spin 713 — Best For Gaming and Performance: Acer delivers powerful productivity and game punch with a 10th-generation Intel processor and up to 16GB of RAM. Lenovo Chromebook Duet - Best Chromebook Tablet: Coming with a removable kickstand and keyboard in the box, Lenovo offers us the best tablet experience on a Chromebook to date

Acer Chromebook Spin 311 (3H) - Best Compact Chromebook: This 11.6-inch Chromebook is perfect for users on the go and those who need a quality laptop on a budget. ASUS Chromebook Flip C434 - Best Balanced Chromebook: With enough power for work, enough style for casual computing, and an 8GB option for extra stability, the 434 is a cheap laptop for everyday user. ASUS Chromebook Flip C214 - Best For Students: This ultra-portable Chromebook is sturdy, lightweight and perfect for the clumsy student in your life. HP Chromebook x360 14c — Best Business Chromebook: If you want a durable Chromebook with power and performance for full-time work, the 14c won't let you down. Google Pixelbook Go - Best For Upcoming Features: Google's own Pixelbook line gets Chrome OS features first, and has one of the best keyboards and trackpads ever. Samsung Galaxy Chromebook - Best Chromebook 4K: This powerful and impressively thin Chromebook has an absolutely gorgeous screen perfect for watching movies or editing photos. Acer Chromebook 715 — Best Budget Workhorse: This large Chromebook offers great performance at a great price, and the full keyboard with pad number is a huge help for teachers and businesses. Chromebooks are large small laptops, especially for students and for anyone who is not interested in the more intensive maintenance required for Windows laptops, but this demand for chromebooks absolutely exploded. When the locks began sweeping the U.S. and Europe, millions of people quickly realized they needed another computer to let their children at bay learn while Mom and Dad were working on their own laptops. Millions more people realized that old laptops and aging laptops were too weak to handle sustained video conferencing in this home age work, and so they set out to find a lightweight and affordable laptop to fit Needs. Combine millions of users needing a new laptop as soon as possible with component shortages coming from manufacturing shutdowns in China around the beginning of the year and you have today's Chromebook market: big Chromebooks sell out in hours, price gougers are in full swing, and even the biggest Chromebook manufacturers are completely sold out for the next few months. When you look at chromebooks on Amazon, you'll notice that most top ads don't have a price next to them. These are Chromebooks that Amazon has temporarily sold, but don't worry, there are still great Chromebooks to buy without giving resellers the satisfaction of paying over-inflated prices. Come back early and often. Retailers replenish the second they get a new inventory, not just Monday morning, so come back and go through the various retailer links to make sure you get the Chromebook you want at the price you deserve. Here's our detailed list of the best Chromebooks you can buy, but you might have to check every few days to catch them in stock. Source: Ara Wagoner/Android Central Bottom line: With a powerful 10th Generation Intel Core i3 chip, a beautiful 13-inch 1080p touchscreen, backlit keyboard and remarkably reasonable price, the Flex 5 is a great Chromebook for just about everyone. Despite a thin and lightweight build, the Flex 5 features a 360-degree hinge for easy conversion to tent or tablet mode, as well as stereo speakers shooting up, and support for both USI Stylus and Wi-Fi 6 for power users. Screen Size: 13.3-inch IPS touchscreen 1080p Processor: Intel Celeron 5205U / Intel Core i3 RAM: 4GB Storage: 32-128GB Battery life: 10 hours Ports: 2x USB-C, 1x USB-A, microSD, audio combo socket Weight: 3 lbs Colors: Graphite Grey Other features: Wi-Fi 6, Bluetooth 5.0, 720p camera, 45W charger Auto Update Expiration Date: June 2028 RAM Storage Processor Supplier Intel Core i3 64GB 4GB \$410 at Amazon We recommend the Intel Core i3 version of the Flex 5 for its extra power and long-term value. Compact design USI Pent compatibility Speakers oriented up Keyboard backlit Limited configuration options No option ram 8GB The best Chromebook you can buy is not necessarily the most powerful or the most expensive. It combines a number of features in a compact body that will appeal to almost every Chromebook user, from novices to experts, students to professionals. If your next laptop is there to work hard (and plus), check out our new favorite Chromebook on the market today, the Lenovo Flex 5 Chromebook. This laptop shares much of its design and feel with the previous overall choice, the Lenovo C340-11, and indeed it is barely an inch larger than the 11.6-inch laptop despite having a 13.3-inch light touchscreen inside. The glasses around the Flex 5's 1080p screen are thin enough — just enough for you to when you return between laptop, stand and tablet modes. This means you'll get a compact laptop with a screen big enough for quite comfortable split-screening. You'll also get a backlit keyboard that's comfortable enough to type for 10 hours a day - that's what I'm using to write this right now - and sitting on either side of the keyboard are speakers that are going to get nice and loud (although a little tinny when you start blaring). This version comes with Intel's latest 10th-generation i3 processor - there's also a version with a Celeron available, but it's worth switching to the i3 - with 4GB of RAM and 64GB of storage, which is a lot of power for today's complex business tasks. Like many of the new Chromebooks on this list, the Flex 5 comes with two USB 3.1 Type-C ports and a single legacy USB-A port, as well as a microSD slot for expandable storage and a headphone jack. You get Wi-Fi 6 for faster, more reliable connectivity — and Bluetooth 5.0, so your headset won't fall as often — and the 45W charging brick in the box exceeds the battery by 52.5Whr in just 90 minutes. Chrome OS was built to work well on modest hardware, so on mid-range flex 5 hardware, things are smooth and stable. Although we're not thrilled that there isn't more storage and memory sizes - would it kill Lenovo to offer 8GB models?! — there are very few things to complain about here. 4GB was enough for all the work I did, even when I had several Windows and Android apps open. When I first agreed to review the Flex 5, it didn't seem all that amazing on paper, especially compared to the Athena Chromebooks project that came out this year. Once I had spent a few days with it, however, the Flex 5 had completely conquered me. That's more than the sum of its parts - and much more than its modest price would make you believe. Lenovo already knows how to make a big little Chromebook, and with only a few small upgrades, it makes a Chromebook that can please just about everyone. Source: Ara Wagoner/Android Central Bottom line: If you need performance and power in your Chromebook, you'll want to watch a Chromebook Project Athena so you know it's powerful, fast and secure. This 13.5-inch 2-in-1 surpasses the rest of this Project Athena culture in ports, durability and value, giving you a rugged laptop for hundreds less than its competitors. There is even a built-in HDMI port, for professionals who are constantly external monitors or the projector in the conference room. Screen size: 2256x1504px 3:2 13.5-inch touchscreen Processor: Intel Core i3 / i5 / i7 RAM: 8-16GB Storage: 64-256GB Battery life: 10 hours Ports: 1x USB-A, 2x USB-C, HDMI, microSD, audio combo socket Weight: 3 lbs Colors: Silver Other features: Project Athena Certified, backlit keyboard, 720p webcam, 45W charger Automatic update expiry date: 2028 Processor Storage RAM Supplier Intel Core i5 128GB 8GB \$630 to Best Buy Powerful Futuresproof Specs Bright 3:2 screen for productivity HDMI built-in port Speakers are not a great limited availability like the Acer Spin 13 before it, the Acer Chromebook Spin 713 is one of the most powerful Chromebooks out there that just doesn't go completely on edge in terms of price. Project Athena is a program launched by Intel working with manufacturers to produce laptops that will be fast, powerful and reliable. So, as Project Athena Chromebook, there is an expectation of speed and power that the Spin 713 absolutely delivers on. Even with dozens of open tabs and a couple of Android apps, this Chromebook keeps wandering along, so the fan can kick on from time to time - yes, an Intel Core i3, i5, or i7 requires a fan to keep it cool once you really do it. The bottom of the laptop doesn't heat up too much, so you can still use it on your lap quite easily, but you'll hear the fan from time to time. Acer diverged the Chromebook Spin 713 from the first two Chromebooks Project Athena in two ways. First of all, you actually have more than USB-C ports; there is a USB-A port and an HDMI port on the 713, which means you're not jamming for a USB-C hub immediately. Second, while there are some more expensive configurations if you want an i7, the standard i5/8Gb/128GB model is a perfectly reasonable price. If you want to play on a Chromebook - beyond Android apps and web games - there isn't much support beyond Stadia yet, but we know that Google is working to increase Steam compatibility on chromebooks through Chrome OS's Linux capabilities. Since the Spin 713 is Project Athena certified, it's going to be one of the Chromebooks with the best chance of taking advantage of it once Google and Steam have things where they want them. Meanwhile, it's still the best bang for your money on a high performance Chromebook, and as the 3:2 aspect ratio on the screen is something many professionals swear on their work machines. This aspect report isn't as fun for watching movies, but it's great for seeing more data on your screen at once, especially when split-screening, and 2K resolution gives you a sharper picture. If you're someone who likes a 3:2 screen and a strong, strong processor to power it, this Chromebook Project Athena is for you. Source: Ara Wagoner / Android Central From \$299 at Amazon (64GB) Bottom line: If you want a tablet that offers the best services and services Google without instantly falling behind on software updates of how Android tablets do, the Lenovo Chromebook Duet is the perfect sofa companion that can pull double-service as a lightweight laptop while your kids co-opt for the family desk. Screen size: 10.1-inch touchscreen 400 nits 1920x1200px CPU: Mediatek Helio P60T RAM: 4GB 64-128GB Battery life: 10 hours Ports: 1x USB-C (USB 2.0 - DP) Weight: 0.94 lbs (tablet only) / 2.03 lbs (with cover and keyboard) Colors: Two-coloured ice blue and iron grey Other features: USI Stylus compatibility, including kickstand support and removable keyboard, 10W charger (maximum charge speed 18W) Auto Update Expiration Date: June 2028 RAM Storage Supplier 64GB 4GB \$249 at Walmart 128GB 4GB 4GB \$299 to Best Buy Excellent Kickstand Battery Life and Keyboard Included Bright 1080p screen for comics and videos Too small for some a single PORT USB-C Lenovo first debuted the duo at CES and it gave us hope that we could see a Chromebook tablet finally well done. The Lenovo Chromebook Duet has a battery that goes on and on, especially if you're just doing some casual and playback games, and the screen is nice and bright for videos and comics. The specs say the battery lasts 10 hours, but I have an average of 10-12 hours on an average charge. The removable keyboard can feel cramped if you use it for hours and hours on end - if you have larger hands, you'll probably want to invest in a full-size keyboard for your desktop to use instead for stationary use - but like a companion device or sofa computer, the Duo is perfect. The screen is bright, the videos are sharp, and the comics are beautiful. The speakers are a bit on the quiet side, but like a thin 10-inch tablet, I'm fine with pairing headphones or a Bluetooth speaker to it for YouTube binges. Since opening pre-orders, the Duet has been very, very hard to find in stock, so if this seems to be the Chromebook for you, you'll want to check early and often to see if the stock has just been refreshed. It's worth waiting for a Chromebook tablet that is affordable, reliable, and fully accessorized out of the box, after learning of the errors of Google Pixel Slate. There is only one port on the Duet, only one USB-C port, so you'll want to use Bluetooth for headphones and leave the port free for charging. The lack of a headphone jack is not a huge loss, but some will be turned off by it; I'm more disappointed that there isn't a USB-C port on both sides of how virtually every Chromebook released in the last couple of years has. It's worth mentioning that the charger in the box here is a piddly little 10W USB-A charger - hey, Lenovo had to cut costs somewhere - so you'll probably want to trade that for an 18W power delivery charger instead. The duo charges in less than 90 minutes, but I only wish it at least had 30W charging instead of the same 18W charge that most phones use. Since there is no microSD slot to enlarge internal storage, do yourself a favor and buy the 128GB version if you intend to download a lot of videos and comics for those holiday trips home to see the family. The Duo finally gives us the kind of Google tablet we've wanted for a decade. It comes with a keyboard for you need it, but it works well on its own. Source: Ara Wagoner/Android Central Bottom line: 11.6-inch Chromebooks still constitute a massive section of the Chromebook market, and the best mix of power, portability, and the price to be found right now is the latest generation of the Acer Chromebook Spin 311. It throws ports in exchange for a lighter weight and battery that will go all day and then some. Screen size: 11.6-inch IPS touchscreen Processor: Mediatek MT8183C RAM: 4GB Storage: 32-64GB Battery life: 14 hours Ports: 1x USB-C, 1x USB-A, audio combo socket Weight: 2.65 lbs. Colors: Pure Silver Other features: 720p camera, 45W charger Auto Update Expiration Date: June 2028 STORAGE RAM Supplier 32GB 4GB \$300 to target 64GB 4GB \$330 at Walmart We highly recommend buying the 64GB configuration due to the lack of microSD slot. Compact design Good build quality Long-term support limited ports / no microSD slot No option ram 8GB Normally, when you shop for a new laptop, it's easy to get caught up in the specs and end up buying the biggest, most powerful laptop you can afford. However, for Chromebooks, this isn't necessarily

going to give you a better experience. The large screens and fancy features are all good and good, but most of the time when I leave my apartment to go do some writing in a brighter and more fun atmosphere, I bring a lightweight 11.6-inch Chromebook like the Acer Chrome Spinbook 311. Acer has lost the sides of the 311 and reduced ports while it was at it, but you still get a USB-C port for 45W Power Delivery charging as well as the use of hubs, adapters and external monitors, a USB-A port for legacy devices like wired keyboards and old flash drives, and a 3.5mm audio combo socket. You may have noticed that the list didn't include a microSD slot, a rarity for a Chromebook in this price range, and yes it's weird that we don't have one. At least we have a 64GB version if you care about storage. This new model is also expected for nearly eight years of Chrome OS updates, with an AUE date of June 2028. It's lightweight and very portable, easy to slip into a bag as you move from meeting to meeting and quick to wake up once you get to where you're going. The glasses around the screen are large, but they're useful when you flip it into tablet mode, and the keyboard is easy to type for hours at a time. Speaking of hours at a time, Acer says that this Chromebook last up to 16 hours in its technical sheet, and with real use of the work, I usually get 12-14 hours on a single charge depending on how much I crank up the brightness of the screen. While the light on the ports, the new generation 311 still has enough power and storage in one night, light package. Source: Ara Wagoner/Android Central Bottom line: The ASUS Chromebook Flip C434 is essentially a 14-inch Chromebook in a 13-inch shell, giving you a larger screen all be portable. Between its thin, solid construction, excellent battery life and options for higher RAM and storage, the C434 is a Chromebook that can do it all. One of the few Chromebooks to offer a backlit keyboard, it's perfect for long nights and dark offices. Screen size: 14-inch IPS 1080p touchscreen Processor: Intel Core m3 / i3 / i5 RAM: 4-16GB Storage: 64-512GB Battery life: 10 hours Ports: 1x USB-A, 2x USB-C, microSD, audio combo socket Weight: 3.30 lbs. Colors: Spangle Silver Other features: Backlit keyboard, 720p camera, 45W charger Automatic Update Expiration Date: June 2026 We recommend the Intel Core m3 version with 8GB of RAM as it is the best balance of performance and value. Exceptional Aluminum Design Good Backlit Keyboard High Quality Display 8GB models are increasingly difficult to find Keys are hard to see in some lighting conditions ASUS is one of the most well-known manufacturers of Chromebook and has been since day one. What sets the company apart from the competition is the emphasis on creating a high-end hardware experience in a shell that is as compact as possible. With the Chromebook Flip C434, ASUS crammed what is essentially a 14-inch Chromebook into a 13-inch body. ASUS focuses on the fundamentals here, including a very high-level 1080p LCD touchscreen surrounded by thin glasses, with an oversized precision trackpad, a backlit keyboard - a rarity at this price - and a tapered aluminum design reminiscent of the MacBook Air. The hinge tilts 360 degrees, allowing you to adjust the Chromebook in traditional, tent and tablet mode — hence the Flip in the name — all in a body less than three pounds. The included Intel Core m3-8100y processor isn't the fastest available, but it's more than enough for everyday use, especially when paired with the optional 8GB of RAM - which you should get if you intend to do a lot of multi-tasking during video calls. There is also a model with an i5 processor and 128GB storage, but these are so hard to find now that you're better off getting the new C436 instead. As for inputs, you get two USB-C ports and a single USB-A port with a microSD card slot. The laptop announces eight to 10 hours of battery, and that's around what we usually get, too. Ports are one of the reasons why I'm still recommended the C434 on the newest ASUS Chrome flipbook C436; the C436 has only USB-C and microSD ports, no USB-A port. Yes, USB-C hubs are but having at least one USB-A port on a laptop is very useful, especially for a laptop of this size. The other reason I recommend the C434 on the C436 is that the C434 has a more consistent battery life - although the C436's battery has improved after the launch bugs have been cancelled - and the price. Like the newer, brighter, more upscale version of C434 with stronger processors, improved ram and SSD storage on eMMC eMMC The C436 is hundreds more than last year's model while offering a performance boost that most people will never be able to really enjoy. The C434 is like an Audi while the C436 is like an Alfa Romeo: there is premium and then there is more money than meaning. The 14-inch touchscreen excels in multitasking, and the backlit keyboard is easy to type late at night. Source: Ara Wagoner/Android Central Bottom line: Lightweight and portable, the ASUS Chromebook Flip C214 is one of the most versatile Chromebooks out there. It has a spill-resistant keyboard and has been certified MIL-STD 810G, which means a drop of a bag or table won't hurt it, making it perfect for a student of any age. In addition, the stylus included makes it suitable for school! Screen size: 1366x768px 13668px 11.6-inch touchscreen Processor: Intel Celeron N4000 RAM: 4GB Storage: 32GB Battery life: 12 hours Ports: 2x USB-C, 1x USB-A, microSD, audio combo take Weight: 2.6 lbs. Colors: Black Other features: 720p camera, 45W charger, optional built-in stylus Auto Update Expiration Date: June 2026 Durable, drop-resistant build Spilling built-in stylus keyboard built-in (on some models) 360-degree hinge Limited Storage Options Price gouging problems The problems of 11.6-inch ASUS Chromebook Flip C214 folds completely flat in a shelf with a high-strength zinc alloy hinge that shouldn't wear out, no matter how much your child - or you - are on it. With a channeled, spill-resistant keyboard, dropping a drink on it shouldn't send you immediately to a repair shop, just to the kitchen for a rag. ASUS has a number of student-friendly features on the C214, including a fully articulated hinge, a built-in stylus on the premium model, and plenty of ports to plug in accessories. The main attraction here, however, is how portable the laptop is: it can fit in the smallest of backpacks, making it perfect for kids who are starting to bring a laptop to school. You're also going to get a very favorable battery school life of about 12 hours of use, which should get most people through a full day. Even better, ASUS has thought about every use case, adding a rubbery handle to the edges of the C214, making sure that the clumsy hands won't lower it while toting it around the classroom, and the scratch-proof coating should prevent it from looking too scratched after months and years of constant attention. There is only 4GB of RAM, which should be very for daily homework and research. I would try to keep the amount of tab switches while on video calls under control, but 4GB should be enough for most child workloads. 8GB would be better, but there is no option for it on this generation. Maybe in the next version. The other problem that C214 faces is not a product problem, it is a market problem. This year, the increase in distance learning and home work has led to a race on Quality Education Chromebooks, so that while you can find the quite easily, chances are the price will be marked up to about \$50-\$100 by resellers. It's a captive market and resellers are taking full advantage, but I wouldn't go higher than \$450 for the non-stylus version or \$500 for the stylus version. This version of the C214 improves the 2017 model in every way: thinner, more powerful and better optimized. Source: Jeremy Johnson/Android Central Bottom line: While there are flasher Chromebooks out there, if you want a discreet business laptop that won't make you pay hundreds for a Chrome Enterprise upgrade or security features, HP has you covered with the Chromebook HP x360 14c. Just do yourself a favor and get either the Intel Core i3 or i5 models. Screen size: 14-inch IPS 1920x1080px touchscreen Processor: Intel Pentium Gold / Intel Core i3 / Intel Core i5 RAM: 4-8GB Storage: 64-128GB Battery life: 13.5 hours Ports: 2x USB-C, 1x USB-A, microSD slot, audio combo socket Weight: 3.6 lbs. Colors: Mineral Grey Other features: Wi-Fi 6, BT 5.0, backlit keyboard, fingerprint sensor, USI stylus support Automatic Update Expiration Date: June 2028 We recommend the i3/8GB configuration for the best power and price balance, as well as the extra ram for extended multitasking during video conferencing. Solid Construction and Performance Large 2-in-1 Chromebook Ample Configuration Options Security Features as a Fingerprint Sensor, Kill Switch Screen could be brighter Heavy One of the Chromebooks segments builds their reputation on the business because chromebooks are affordable, reliable, and therefore drop-dead easy to deploy and manage. The deployment benefits are not so useful for the everyday consumer, but the durability and ever increasing amount of power and longevity that has been coming to the Chromebooks business - especially in the last two years - is. Take the HP Chromebook x360 14c, for example. It's not the strongest of HP's business Chromebooks, but it offers a great deal of power and versatility while remaining affordable for those who work from home or to a BYOD company (bring your own device). Like many Of the Chromebooks Project Athena and Enterprise that arrived in 2020, the Chromebook HP x360 14c has a fingerprint sensor for easier connections after unlocking your Chromebook once earlier in the day. You also have a physical kill switch on the side of the laptop that disables the camera, not just a flimsy plastic cursor that can jam or slide open at the slightest HP gives you a choice of processors on the x360 14c, but unless you absolutely have a hard limit to your budget, I recommend skipping the Pentium Gold models and instead typing the i3 or i5 models so you have a little more power for your multi-window sessions and all the Linux applications you could use. The i3 and i5 models are also the only models that come with 8GB of RAM, which you absolutely should absolutely for if this is meant to be a full-time laptop working. The 2-in-1 shape factor might not seem like it's all that useful for a laptop of this size - and yes, a 14-inch tablet is a bit much - but being able to return it to stand mode is wonderful if you have a workstation at work with an extra monitor or mechanical keyboard. Stand mode allows you to get that nice big touchscreen closer to your hands so it's easier to type on everything at work, and after hours you can launch it into stand mode again to keep the keyboard out of the way while you watch movies in bed, or playing Freecell while you wait for the next meeting to roll around. From premium finishes to privacy-oriented hardware and software, performance and specifications, the x360 14c is ideal for work (and gaming). Source: Daniel Bader/Android Central Bottom line: Google's own Chromebook, the Pixelbook Go, is a traditional clamshell laptop with one of the best keyboards and trackpads we've ever used. It also has excellent integration with Google Assistant, and can get new Chrome OS features before other Chromebooks. The magnesium body is light and strong, and even the entry-level model comes with 8GB of RAM for a lot of tab-hopping. Screen size: 13.3-inch 1080p touchscreen/ 13.3-inch 4K touchscreen Processor: Intel 8th Gen Core m3 / i5 / i7 RAM: 8-16GB Storage: 64-256GB Battery life: 12 hours Ports: 2x USB-C, audio combo socket Weight: 2.3-2.4 lbs Colors: Just black or not pink Other features: 1080p camera, 45W charger, Titan security chip Auto Update Expiration Date: June 2026 Lightweight, Incredible Compact Keyboard Design and Best-in-Class Battery Life Trackpad Pricey Limited Range of Hinges While the 3:2 Form Factor of the original Pixelbook certainly had its fans, I'm glad that punch that the Go uses a much more reasonable 16:9 aspect ratio, which is better for split-screening and better for in-flight movies. The Pixelbook Go can't fold into tablet mode like the Pixelbook - and most other Chromebooks on the market - but it also means it doesn't need huge gripple glasses around the screen, allowing it to sneak into a thin footprint. This laptop, despite a spacious 13.3-inch screen, weighs only 2.3 pounds. Another great feature of The Go is a more functional design that is still luxurious. The Go has rounded edges and a wavy bottom that increases grip and stability. The Go also has two colors - not pink and just black - silent keys that are among the best we've ever typed on, and a lightweight magnesium body similar to that used by the Microsoft Surface line. If you live to have the latest features, the Pixelbook Go is for you because, like Google's Chromebook brand, this shiny baby gets all the new toys before anyone does, especially once you jump on the Beta or Dev channels. You're invest in some USB-C hubs, because the Pixelbook Go has only three ports: a USB-C port on either side of the laptop and a headset jack. While Google charges a premium for this Pixelbook over our other top choices, the Pixelbook Go is one of our favorite traditional laptop models. Every aspect of the design has been considered, from the silent-close magnetic lock to the high-quality 1080p camera, so important in our current environment. Fortunately, if you're willing to spend a little more, Google offers premium Pixelbook Go options that go up to an i7 Core with 16GB of RAM and 256GB of storage - so we recommend sticking to the Core i5 version that has a generous 8GB of RAM and 128GB of storage. Although it's not a 2-in-1, the Pixelbook Go is a powerful, high-end Chromebook with a gorgeous magnesium shell. Source: Android Central Bottom line: If you want the best absolute screen you can get on a Chromebook, you know it must be a Samsung. The Samsung Galaxy Chromebook is not only beautiful, it is powerful, with a 10th Gen i5 processor and 256GB of SSD storage. This is a super-thin laptop with no fan with an i5, so just keep in mind this laptop will get hot during longer sessions. Screen size: 13.3-inch AMOLED touchscreen 3840x2160px (4K) Processor: 10th Generation Intel Core i5 RAM: 8GB Storage: 256GB Battery life: 8 hours Ports: 2x USB-C, microSD, audio combo socket Weight: 2.29 lbs. Colors: Fiesta Red or Mercury Grey Other features: Project Athena Certified, backlit keyboard, fingerprint sensor, fan-free, built-in stylus, front and rear cameras, 45W charger Auto Update Expiration Date: June 2028 Best screen on a Super Thin Chromebook and beautiful built-in stylus to draw No fan means it gets hot No configurations, only the color choice Meh battery life Chromebooks with 4K screens are still a relatively small and elite group, and if you want a Chromebook 4K that is actually light enough to carry all day without having to blow a whole month of rent And if you want a Chromebook 4K that is actually light enough to carry all day without having to blow a whole month's rent, Samsung's latest and largest Chromebook is the one that suits you. The Galaxy Chromebook features a 4K display, a 10th-generation i5 processor, 8GB of RAM and a 256GB SSD. It's the brass ring. As a Chromebook Project Athena, it's powerful and secure, offering a fingerprint sensor in the top right corner of the keyboard and Chrome's sandbox system. for applications. The galaxy also comes with a built-in, pressure-sensitive pen - similar to the ones we find on the Note series - and it's a 2-in-1 so you can turn it into a drawing tablet or support it in bed for a movie marathon. The only downside to the Galaxy Chromebook - apart from this price tag - is that its thin profile means that the background of the Chromebook can warm up during intensive sessions. The battery is also a little weaker than we expected, but Google and Samsung are working on some optimizations to help bring it back back 8 hours we expect from a Chromebook. Whether you want the latest specs for your work - not pink and just black - silent keys that are among the best we've ever typed on, and a lightweight magnesium body similar to that used by the Microsoft Surface line. If you want a large screen for less, Acer offers a discreet Chromebook with an i3 processor and plenty of storage and a 15-inch touchscreen without breaking the bank. This is a Chromebook that is made to do things, especially with its digital pad keyboard to enter notes and other numbers. Screen size: 15.6 inches 1920x1080px IPS (optional touchscreen) Processor: Intel Pentium 4417U / Intel Core i3 / i5 RAM: 4-16GB Storage: 32-128GB Battery life: 10 hours Ports: 1x USB-A, 2x USB-C, microSD, audio combo socket Weight: 4.3 lbs. Colors: Grey Other features: Life-size keyboard with numpad, 720p webcam, 45W charger Auto Update Expiration Date: June 2025 Affordable Power Keyboard with Digital Pavé Large Touch Screen Is A Little Dark Design Is Boring While the Acer Chromebook 715 is just okay in some areas - the screen is adequate, but not stellar, speakers are tiny sometimes - it adds to a reliable option if you want a big screen, but not a big price. There aren't many 15-inch Chromebooks in this price range these days - let alone with touch screens - so that contributes to the unimposing 715 set in the rather crowded Chromebook range that Acer continues cranking out. A touch screen on a clamshell laptop may seem superfluous, but I'm glad it's here. The foldable hinge here is pretty sturdy that if you can open it with one hand, I almost always took the precaution of using two. I am grateful for this rigidity, The lid wouldn't flop flat or slam closed when I pick it up on my lap the way some 2-in-1s do. The battery is also as they say, beauty is inside, and the power under the modest aluminum chassis is what should attract you to the Acer 715. The Intel i3 is a powerful processor perfect for professionals and power users. I wish it was paired with 8GB of RAM, but 4GB has been enough in my limited time with my review model so far. Like the Lenovo C340-15, the 715 comes with a Numpad on its keyboard, another advantage for number-crunchers and teachers with dozens of notes to enter. There's an even more powerful setup available, but given the exorbitant asking price, I don't think the 16GB RAM is worth it. Standard i5/4Gb/128GB offers extra storage for videos/apps while being powerful enough to do your job, and this is the price interpreter. The build quality is solid on the powerful but discreet Acer Chromebook 715, making it ideal for office work, but a bit great for travel. The beauty of the Chromebook market is that there are so many options to choose from. If you want something specifically for portability and battery life, there are many excellent choices. Choice. If you don't intend to move it from a desktop and prefer a large, beautiful display and a lot of cpu power to back it up, there are plenty of options for you, too. Our first choice is the Lenovo Flex 5 Chromebook, which hits all the bargains when it comes to a laptop, including build quality, performance, battery life, and longevity, all for a very fair price. The only problems with the Flex 5 were that it has been selling very quickly in recent months - but the offer seems to have stabilized - and that it doesn't have an 8GB RAM option for those who are more demanding on their system. If you want an 8GB Chromebook that looks fabulous and won't break the bank, take the Acer Chromebook Spin 713, which will make you run a little more money, but comes with a brighter 2K screen in a 3:2 aspect ratio. As a Chromebook Project Athena, the Spin 713 is powerful enough for gaming and virtualization software like Parallels. Not everyone will need it, but if you do, it's the one to beat. On the more compact and lightweight side of things, the Lenovo Chromebook Duet is a great companion device while the Acer Chromebook Spin 311 is a good 11.6-inch Chromebook for students and light on the go. Chromebooks could get fixed as being only for students and employees. Still, there's really a Chromebook for everyone these days, whether you're just browsing email and social media or going down and dirty with Linux apps and ides coding. Although there are many great Chromebook manufacturers out there, Lenovo and ASUS models seem to go harder and last longer than the competition, although Samsung, Dell, and HP can make some pretty high-end Chromebooks when they put their minds to it. Choosing your Chromebook is slightly different from selecting a Windows or Mac laptop because of the standardized, cloud-centric nature of Chrome OS. Because Google controls the appearance of the software and update planning for each Chromebook model, a Lenovo-built Chromebook should act in the same way as a Chromebook from Dell or Samsung. What does that mean? This means you can focus a little less on these basic specifications and focus more on what you want to do with the machine you choose. This process may seem a little out of order, but believe me on this one: Get one with a touchscreen - a 2-in-1 if you can touchscreens can be a luxury for other laptop systems, but on chromebooks, I consider it a requirement. Chrome's touch optimization improves every month, and since most of the Android apps that Chromebooks can install via Google Play are touch-optimized, get a touchscreen model! Touchscreen models aren't usually much more expensive for Chromebooks in 2019 — many Chromebook models don't even bother with non-touch versions these days — but if you see a Chromebook that says it's non-touch, go away and don't look back. It's a beautiful thing Be able to tap on the screen when scrolling through Amazon, and after playing Solitaire on a touch screen, you'll never come back using a mouse. This touchscreen is even more handier on 2-in-1s, the best form factor I've seen for chromebooks yet. Being able to support your Chromebook in Tent mode for a movie, or fold it flat in Tablet mode for some navigation in bed while down with the flu is amazing, but having a 360 degree hinge is great for daily productivity, too. You can fold your Chromebook back to more angles when you work in clumsily lit offices with weird light glare or leaned on your knees to a ball game because you haven't forgotten those quarterly spending reports that were supposed to tomorrow and refuse to skip the game for it. Deciding on the other features you want Chrome OS is almost entirely the same on each device from a software perspective, which means that outstanding hardware features become paramount, and figuring out which of these features you want or need in a machine can help narrow the field and direct you to your perfect Chromebook. As mentioned earlier, you want a Chromebook touchscreen - a 2-in-1 if you can swing it - but if you tend to do a lot of watching movies, you may want a high-quality screen, or loud, front-facing speakers. If you're looking to be more productive with a multitude of open tabs and multi-window screens, you may want a 3:2 screen that's more suited to split-screening and a more powerful processor/memory configuration. Productivity-conscious users should also pay a special mind to port configurations on their potential Chromebooks, as USB-C begins to replace most other ports on higher Chromebooks like the Pixelbook while the more failed models keep usb-A around alongside new USB-C charging ports. Families with younger children — or travellers who are prone to slips, spills and accidents — may want to turn to the growing number of Chromebooks with a military-grade 810G mil-STD keyboard or spill-resistant keyboard. Choose your size Chromebooks come in a variety of sizes, but they tend to gravitate to four sizes in general: 11.6-inch models are portable and affordable. At their smallest size, their screens may look good, even if they are less than 1080p native resolution - if the resolution of the screen is treated a little differently on Chrome OS; We'll come back to that Later. Depending on the screen goggles, 11.6-inch Chromebooks may have full-size keys or slightly shrunken keys, although most manufacturers use full-size keys on 11.6-inch models. 12.3-12.5-inch models are becoming increasingly popular, especially with detachable and 2-in-1 models such as the HP Chromebook X2, Microsoft's Surface Pro line and the Google Pixel Slate. These models often have a 3:2 appearance ratio, making them more useful for split-screening windows, multitasking, and sketch/photography applications. 14 inches sit at the high margin for the portable category. Yet with thin glasses and proper engineering, these can be almost as portable and manageable as 13-inch laptops with 7-9 hours of battery life. If you need to display your text to a larger font - and yes, Chrome OS has a separate font scale regardless of the zoom display - a 14-inch model is your best bet for a productive Chromebook that won't force your eyes, especially since most 14-inch models start at 1080p. 15.6-inch models are made for desks and dining tables. I refer lovingly to these lines - laptop in name only - because while you can push them into larger laptop backpacks for a vacation, these Chromebooks are not made for tricks and tray tables, they are made for a standard office environment where they usually live in peace. These larger laptops are great for productivity because you can see more at once, but they tend to have a shorter battery life and higher weights, which deters them from being dragged around every day. In general, the larger the size of your Chromebook, the more you can potentially fit on the screen, but it will also be less portable and shorter in battery life. The smaller it is, the less heavy it is and (usually) the cheaper it will be. Nevertheless, smaller models may also suffer from lower-resolution screens, although Chrome OS's display zoom and font adjustments may somewhat compensate. Memory and storage — what do you really need? RAM — Random Access Memory — is an essential specification for computers of all sizes and shapes, from phones and tablets to desktops and laptops. It's used by your computer's processors to keep your tabs, apps, and executions of commands, clicks and operations that run your Chromebook. So how much RAM do I need? 4GB of RAM in a Chromebook is fine today. 8GB is better, and high-end chromebooks can come with 16GB or more, but 4GB of RAM is more than enough to run Chrome OS with a couple of apps and a dozen Chrome tabs. If you're a longtime windows user - or a longtime computer user of any kind - looking at storage on most Chromebooks will seem confusing at first because it's not going to sound enough. Chrome OS is based on cloud storage - Google Drive is integrated directly into the Files app - but the Local is always essential for things like Google Play's Android apps, offline documents and downloaded music/movies for those horrible Wi-Fi-minus flights. You can also extend storage on many Chromebooks with an SD or microSD card, but there's no beating the proper local storage to begin with. 32GB of storage is achievable, but I recommend you go with a model with at least 64GB of storage. Finding 128GB or more is usually reserved for high-end Chromebooks with higher price tags, but 64GB Chromebooks are fairly widely available and offer more than enough storage for some offline sync drive a little emergency entertainment. Always check the expiration date! Chrome OS is developed, managed and updated by Google for all Chromebooks, but Google doesn't want to be stuck in supporting every random budget chipset and driver set forever, so that every Chromebook has a shelf life and an expiration date, just like the milk in your fridge! This is the automatic update expiration date, and it can be found for every single model on this handy dandy support page, which I tagged because I'm a monster and you should check often while you shop for Chromebooks. Now, a Chromebook doesn't turn into a pumpkin on its AUE date - assuming your Chromebook lasts three to six years until that date - but it keeps receiving these system updates every Chromebook gets every four to six weeks that contain bug fixes, security patches, and new features. If your Chromebook is still running decently at that time, you're a champion, and with a tiny bit of know-how, you can reformat to run one of the dozen Linux dastros instead. That said, four to six years is a long time for any laptop and chances are yours will get long in the tooth by then, but right now, when buying, always check the AUE to see how long your Chromebook will get updates. Some Chromebooks have shorter lifespans than others if they're built on the same platform as a previous Chromebook - AUE is based on the hardware platform, not the individual model, which is also why many Chromebooks have the same AUE dates - so it's something you'll always want to check before you buy, even if the model itself is brand new. What is Chrome OS? Chromebooks run Chrome OS, the Google-managed version of Chromium OS, a free Linux distribution that is open-source, lightweight and web-centric. Chrome OS doesn't allow you to install regular apps and programs like you would on Windows PCs; Instead, Chromebooks rely on web applications, Android apps installed and managed via Google Play, and Linux apps, which are slowly expanding into more and more Chromebook models. Chrome OS's greatest strength lies in its slight stability and reliability. On computers with specifications that barely support other operating systems, Chrome OS works well and often excellent, which means that for low-end laptops, Rule Chromebooks! That said, Chrome can from the most powerful components available - from the latest generation multi-core processors to 4K screens - to create an ultra-smooth, super-powered premium experience. Chrome OS is designed largely for education and business, which means the system is hard to break, easy to manage - all updates are processed in the background by the system itself - and wonderfully secure, with a lucrative bonus program, including a huge standing bonus for anyone who finds ways to compromise Chrome OS in its extra-locked guest mode. In a nutshell, Chrome Chrome is a lightweight and high security system that is ideal for users with any level of technical know-how. Chromebooks are pretty easy to use for schoolchildren and powerful enough for bigshot businessmen, which means they're perfect for anyone who doesn't need high-intensity system-specific programs like video editors, CAD rendering, and PC games - and even that comes to Chromebooks soon with Stadia. For students — and younger users in general — you'll want to look for a sturdy portable-sized machine. The 11.6-inch Chromebooks are 10-inch Chromebook tablets that dominate the space, with slightly older/lower specifications to help offset their robust requirements and reduced prices. You should check out our full overview of the best Chromebooks for students for our favorites. Favorites.
