Made from a special grade of fresh-water DE, a naturally occurring mineral, with superior absorptive ability

Absorbs liquid internally, like a sponge, allowing quick cleanup of water, oil, grease, water coolant, and much more

Low density and high pore space allow more absorbency at a lighter weight

Can use less product = less disposal of use material/cheaper costs

Industrial grade absorbent designed for quick clean up of water, oil, and grease

Large particles quickly and easily soak up messy spills

Enhances safety

100% Natural Mineral

NSF Registered
OIL ABSORBENT DE™ is perfect for a variety of applications...

- Automotive Retailers, Dealers, Repair Garages, Body Shops
- Hydraulic and Chemical Spills
- Manufacturing Facilities

What is Diatomaceous Earth?
Mined in the western region of the US, diatomaceous earth (DE) consists of microscopic skeletal remains of unicellular plants (diatoms), deposited on lake beds & ocean floors, formed millions of years ago. Similar to a sponge, DE absorbs liquid internally through small pores. This unique mineral is thermally processed to make a broad range of powdered filter aids, functional additives, and granular absorbents.
