## **Play Ball!® Mound Clay**

Play Ball! Mound Clay is designed specifically for the construction and maintenance of high wear areas such as the pitcher's mound, home plate, and bullpen. This is a high density red clay that has the following features:

- ◆ Long lasting performance
- ◆ Consistent quality
- ◆ Easy to use and mold
- ◆ Highest quality clay

## **Play Ball!® Infield Conditioner**

Every field needs an infield conditioner to blend with the infield mix. This mixture is used in all infield clay areas, even the mound and home plate areas. Play Ball! Infield Conditioner is a red super calcined clay that is used to provide the needed moisture retention a sports field manager desires. Additional features include:

- ◆ Enhances surface playability
- ◆ Enhances field appearance and safety
- ◆ Assists in proper field drainage
- ◆ Reduces compaction
- ◆ Provides permanent porosity

## **BallGame Changer™**

BallGame Changer is a premium version of Play Ball! Infield Conditioner. This product has the addition of the patented surfactant technology KT3®. The benefits of this product are as follows:

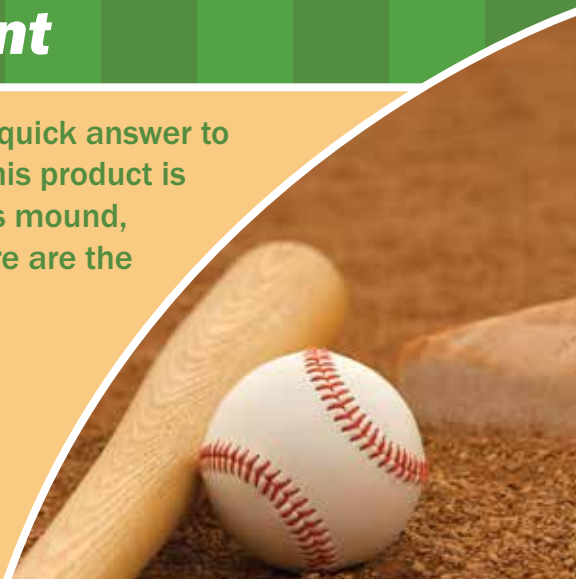

- ◆ Increased water filtration into infield mix
- ◆ Reduces dust and hardness on the playing field
- ◆ Maintains a high moisture level for a longer period of time
- ◆ Improved playability with reduced maintenance

# Play Ball!® Infield Drying Agent

Nobody wants a rain delay or a muddy, sippy field. The quick answer to a wet field after rain is Play Ball! Infield Drying Agent. This product is used on any turf area, infield-skinned surfaces, pitcher's mound, home plate, and warning tracks to absorb moisture. Here are the additional benefits of this product:

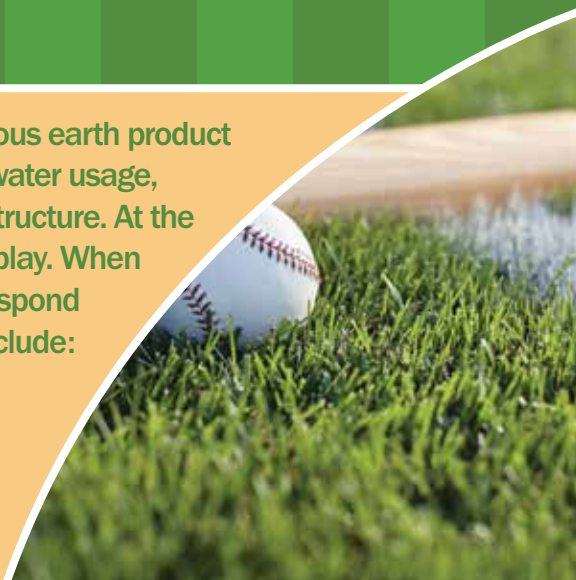

- ◆ Very absorbent
- ◆ Improves surface playability fast, while promoting safety
- ◆ Easy to use

# Axis Ceramic® and AxisDE®

Axis Ceramic, a clay based product and AxisDE, a diatomaceous earth product are premium soil amendments that are designed to reduce water usage, improve drainage, reduce soil compaction and improve soil structure. At the baseball park, Axis is used to reduce the wear and tear from play. When added to the soil the turf can recover more quickly and will respond faster to regular maintenance. The benefits of this product include:

- ◆ Increases plant available water
- ◆ Improves drainage
- ◆ Reduces soil compaction
- ◆ Never stops working
