

Bibliography – Eco Point

The development of the application **Eco Point** Its main objective was to encourage the conscious disposal of electronic waste, promoting sustainability and environmental education. The project integrated technology and information to create a practical and accessible solution that facilitates the location of disposal points and guides users on how to properly dispose of electronic waste, generating a positive environmental impact.

For the development of the application, the following was used: **MIT App Inventor** (MIT APP INVENTOR, 2026), a platform that allows the creation of applications in an intuitive and visual way, even without advanced programming knowledge. In addition, complementary sources were consulted to support the project: the website **Recycle Now** (RECYCLE NOW, 2026), which offers information on good recycling practices; the platform **EPA e-Waste** (EPA, 2026), which details policies for the disposal and collection of electronic waste; and the **UN Sustainable Development Goals** (UN, 2026), used as a reference for aligning the project with global sustainability goals.

The implementation of Eco Point allowed us to understand the importance of integrating technology and environmental awareness, demonstrating that digital solutions can generate a real impact on society and the environment. The project shows that educational and sustainable applications contribute to the formation of conscious habits, strengthening socio-environmental responsibility.
