

ROUTING

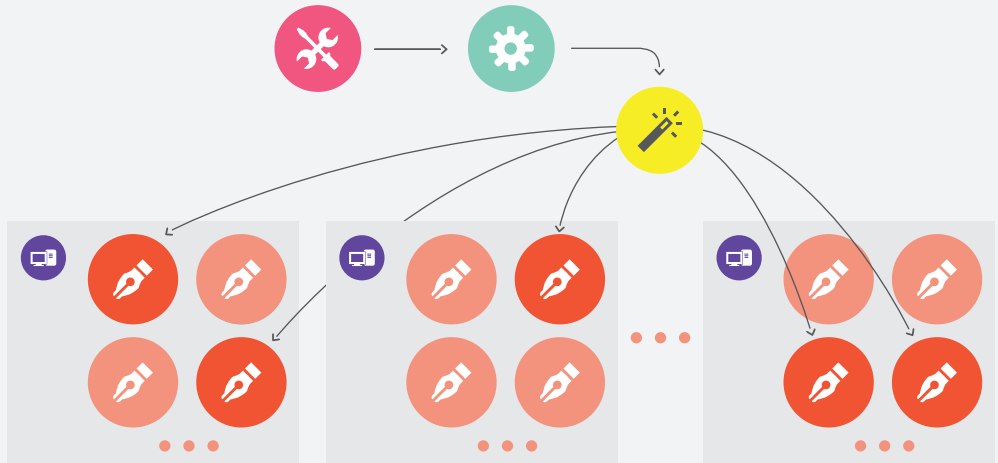

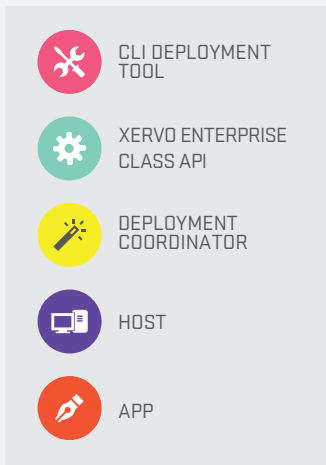

TRAFFIC

BENEFITS & FEATURES

- Powerful and flexible multi-region routing is made extremely simple through Xervo™ by Progress Enterprise Class's orchestration tools
- Every piece in the routing and hosting layer is horizontally scalable and designed to serve enormous application needs
- Combine latency-based DNS with multiple regions and multiple load balancers to ensure a great user experience for global applications
- Smart load balancing ensures even distribution and auto-exclusion of bad nodes
- Unified routing experience for applications hosted on-premises, public cloud or hybrid environments

DEPLOYMENT

BENEFITS & FEATURES

- Fast and easy deployment to any number of app instances across any number of servers
- API and scriptable CLI for easy integration into existing deployment processes and continuous integration tools
- Rolling updates to ensure limited downtime during production deploys
- Old instances remain active while new instances are installing to ensure extremely fast switchovers and limited downtime
