## Optimizing pharmacy management

July / August 2015

Ubik 2.0 takes pharmacy management to a new level. With many exciting new features, learn how it empowers you with the tools you need to deliver high quality care to your clients, while growing your business.

<b>Advanced compliance pack management</b>	Addition of new condensed compliance packs templates: printable therapeutic indications, indicating that a calendar other than daily is recorded for an Rx, "as needed" medication, etc.
<b>Medication administration record (MAR) sheets</b>	Now available in portrait and landscape mode with dates ranging up to 35 days.
<b>Recipe editor for compounds</b>	Enter personalized recipes in the compound management section and easily reuse them when preparing prescriptions. You can also print a compound preparation sheet from the prescription once it has been filled.
<b>MedsCheck</b>	Generate report of patients eligible for a MedsCheck for a given period of time. A visual reminder appears in the patient's record indicating eligibility for a MedsChek (medication review).
<b>Prescription refill requests by patients in Pharma Space</b>	New queue to display received Pharma Space requests (now displayed in a specific menu on the left hand side with a count).
<b>User-friendly Vigilance improvements</b>	Direct printing of counselling sheet (without having to select the printer) and access to associated auxiliary leaflets when available.
<b>Family button</b>	Identify patients from the same family and streamline navigation among their records.
<b>Performance improvements</b>	Quick display of: Rx Vigilance counselling sheets, DUR analysis results and sales reports, new Rx profile presentation.
<b>Laboratory results</b>	Access common clinical values and patient laboratory results to enhance pharmacotherapy care.

### Filter:

From the prescription profile menu, use different filters to track prescriptions. Filter by:

- Prescriber
- Brand name
- Chemical name

Prescriptions entered to a patient's record may also be displayed with the following options:

- Clinically relevant prescriptions
- All prescriptions (active or not)
- According to a date range
