Enhanced Patient Care with Electronic Medical Record

KinLogix at a glance.

TELUS Health Kinlogix EMR is a cloud-based solution used in medical clinics to capture, organize and display patient data in one, integrated patient record. At the same time, it improves the efficiency of administrative tasks and care delivery while further enriching the patient-physician encounter.

The solution's primary benefit? Helping you enhance patient care thanks to the efficiency and simplicity of an electronic medical record.

Embrace electronic medical records.

EMRs are essential building blocks for an efficient healthcare system. In Canada, they are helping increase efficiency and performance, with proven results at the clinical and regional levels.

Benefit from the advantages of an EMR.

- **Enhanced patient care:** The solution provides a comprehensive electronic medical summary listing a patient's health conditions, medications, past consultations and more. This enables health professionals to spend more time caring for their patients.
- **Cost reductions:** The integration of scheduling, billing and resource-management operations into a single solution means greater cost efficiency.
- **Time savings:** Physicians can save valuable time thanks to advanced features such as prescription management, eReferrals and customizable search options.
- **Prevent duplications of administrative services:** By systematically and electronically centralizing medical data, KinLogix helps to eliminate administrative redundancies.

Choose an industry leader in Québec.

Following the acquisition of KinLogix in 2012, TELUS Health became the EMR industry leader in Québec. This acquisition led to several process and efficiency improvements, and helped us turn information into better health outcomes for Canadians.

Sanctioned by the Québec Ministry of Health and Social Services (MSSS) and certified as part of the Québec Health Record (QHR), KinLogix EMR meets eligibility requirements of the Québec Electronic Medical Record Adoption Program (PQADME), featuring:

- A comprehensive patient index
- An appointment calendar that also displays your colleagues' schedules
- A complete messaging module equipped with an alert system designed to facilitate follow-ups
- A dashboard created to enhance the management and monitoring of patient records
- Data encryption and security measures developed according to criteria established by the MSSS
- The only electronic prescriber with a direct link to the QHR
- A reporting module that enables users to properly monitor identified performance indicators
- A viewer where lab results, diagnostic images and other types of documents can easily be displayed, transferred and sent to colleagues for follow-up
- An advanced search tool
- A medication library

A constantly evolving solution.

TELUS Health works closely with physicians in order to better understand clinical realities and tailor the KinLogix solution to the needs of the community.

Created by Dr. Michel Hébert in 2000, TELUS Health KinLogix EMR is the leading EMR solution in Québec.
