Enhancing Patient Care with Electronic Medical Records

# Better information. Better decisions. Better outcomes.

Your practice operates on decisions. In fact, during the course of a day, you use a multitude of data points and make over a hundred clinical decisions that impact the health and wellness of your patients. At the same time, you're running a business. This puts additional pressure on you to improve efficient clinical workflows, reduce costs and deliver the highest quality patient care.

At TELUS Health, we're helping thousands of physicians – just like you – turn information into better health outcomes with the PS Suite® Electronic Medical Record (EMR) solution. With PS Suite EMR, you have all of the relevant patient information available at your fingertips in a single-view format, presented in an intuitive manner.

PS Suite EMR is also about choice: It is available in both official languages, in both local and ASP configurations, and on both Mac and PC. It's your choice.

Additionally, PS Suite EMR is integrated with other health systems, such as community labs and hospitals, enabling you to receive electronic patient results for review anywhere your practice takes you.

With all this to offer, your EMR decision is simple.

## Why PS Suite EMR.

PS Suite EMR is a **powerful, intuitive clinical-management system** that captures, organizes and displays patient information in a user-friendly way, helping you to manage your practice effectively. Plus it is customizable to the way you practice. PS Suite EMR can be installed in either a local or ASP environment – your choice, now or in the future.

### Optimal patient care

- Greater sharing of information between care-team members
- Immediate, multi-person access to patient records
- Timely follow-up by physicians with direct integration to labs and hospitals
- Identification of patient health trends with easy one-step graphing of patient history
- Immediate alerts for potential conflicts with prescribed medicines
- Chronic-disease management tools
- Preventive-care management and drug-decision support tools

### Superior productivity

- Customizable workflow toolbars optimize your productivity with the software, allowing you to spend more time with your patients
- Our new customizable Cumulative Patient Profile (CPP) allows you to control what you see and how you see it
- Powerful appointment and schedule management for single or multiple physicians, specialists, and family physicians
- Extensive template library, including automatic note and letter-generation tools, such as custom forms and encounter assistants
- Integrated eFax solution allows physicians to securely send patient information for referrals and other collaboration

### Administrative capabilities

- Easy submission, reconciliation and tracking, including government insured, direct-patient and third-party billing information
- Integrated patient information enables seamless billing and financial management
- Effective management of fee codes, rules and conditions for insured, private or block fees
- Efficient data entry for frequent complex bills through user-defined supercodes

Certified to OntarioMD 4.1A specification

# Turning information into better health outcomes.

We believe in the power of information to transform outcomes in healthcare for doctors, health practitioners and patients.

We believe in harnessing this power through a profound understanding of healthcare by fully grasping the methods and approaches used by doctors and health professionals in their work; by acknowledging the things patients need and expect from healthcare; and by being open to possibilities.

We believe in giving where we live. By investing in the sector that's most important to Canadians – healthcare – we are helping to improve society by ensuring better health for future generations.

# TELUS is the leader in electronic medical records.

TELUS Health provides EMR solutions to more than 20,000+ Canadian physicians across the country, impacting more than 25 million patient interactions each year. This depth of experience has helped TELUS to understand and address the needs of physicians.

## We make it easy to switch.

Whether you're ready to replace paper-based charts and processes with a cost-effective EMR solution, or you want to switch to a feature-rich, intuitive solution, we have a fast, proven and reliable implementation model for you. More than 1,150 clinicians have made the switch to a TELUS EMR from more than 16 different EMRs, representing millions of patient charts.

## Chosen by family physicians and specialists alike.

Thousands of Canadian family physicians and specialists rely on TELUS Health EMR solutions to deliver outstanding care for their patients. From disease-specific forms and clinical content to guideline-based tools, TELUS Health has worked with hundreds of specialists and amassed a deep understanding of specialist work flows and clinical requirements.

“ PS Suite EMR is intuitive and easy to use and its functionality makes our practice run smoothly and efficiently. We've had a positive transition and the support offered is attentive, quick and reliable. ”

Dr. Nick van der Kamp, Peterborough FHT, Ontario

“ I love the fact that I can VPN and then fax automatically. I can focus on other functions as everything is at my fingertips with the convenient tool bars provided in the PS Suite EMR. ”

Dr. Vincent della Zazzera,  
Ottawa Medical Group

“ We were at a point where we wanted to change EMRs and we quickly narrowed it down to PS Suite. We liked that it was backed by a large stable company, very easy to use and keep track of tasks, and had customized toolbars. The data conversion was very well done and captured all of our data. ”

Dr. Kerri Best, North Durham FHT, Ontario
