

WHY MONARCHTENT?

Since 2004, TentCraft has created the nation's the highest quality event tents, designed especially for business owners, marketers, agencies and those that understand the key importance of looking and being their best.

Entirely fabricated and constructed in the USA — the **MONARCHTENT** differentiates itself from all other options by using the highest quality fabrics, and the thickest aluminum frame in the market.

Each detail has been meticulously scrutinized during our pursuit to make this the highest quality pop-up tent in the world.

Every **MONARCHTENT** comes with a lifetime warranty, and it will outlook and outlast any other tents in the market.

LIFETIME WARRANTY.

The best tent in the industry deserves the best warranty in the industry. Each **MONARCHTENT** comes with a lifetime warranty against any manufacture defect.

INCREASED PEAK HEIGHT.

Re-engineered to stand high above any competitors, the peak pole is now over 12" higher than any other option. Ensuring your branding is visible from all angles.

PUSHBUTTON EASE.

With gentle pressure, the push button releases the corner tensioner, allowing the frame to be opened and closed safely and easily.

INTERCONNECTION.

Each connecting component is made of 100% aluminum, which keeps the tent weight low but provides superior strength for the entire system.

PERFECTLY PROTECTED.

The newly developed rubber covers of the support structure protect the roof during transport, storage, or use.

ROOF SECURING + REMOVAL

The newly patented roof securing hardware connects the roof to the aluminum frame, ensuring a perfect fit for each use. And a restructured release system, allows for effortless canopy removal for changing on the go.

SLIC PIN ASSEMBLY

Each of the frame connection points can now be removed without tools for part replacement and/or easy tent break-down.

INTEGRATED TRANSPORT.

Each tent is engineered with newly patented foot pads which allow the included wheel kit to be effortlessly attached for easy mobility and transport.

PLASTIC SLIDES LEGS.

Each end of the fully anodized aluminum telescopic legs is protected with soft plastic to reduce friction and scratching.

CREASE-FREE MESSAGING

The valances come with adjustable tensioners to ensure that the tent roof is properly stretched. A perfectly stretched roof ensures that no creases appear on your branding and also maximizes drainage.

HOOK AND LOOP FASTENER.

The extra-wide hook-and-loop fastening strips on the inner side of the roof enable the side walls to be attached and removed in seconds. The color of the hook-and-look fastening strip matches the tent color.

SOLID FRAME.

All parts of the aluminum frame are tagged with a clearly visible part number. This makes replacing any worn parts much easier. Simply provide the number printed on the defective component and you will quickly receive a replacement.
