

twitch / RAMPART INITIATIVE Streamer Guide

...

Greetings Agent

Consensus Algorithms and Z-class Skill Matrix analysis has identified YOU as a primary operative for immediate deployment on **Helios: Rampart Initiative**.

An **Extinction-level Solar Event** has been detected and confirmed, and is on course to intersect Earth's orbit in 31.37 hours. In the event of full exposure, all in-planet organic life will be terminated within 17.14 minutes of impact.

Field agents have been activated across Twitch and will be converging for full facility access at:
LOG_>>: 10:00:00_12_11_21_access-route: twitch.tv/twitchgaming

Robotic assembly and temporal deployment systems are armed and standing by for operation.

To prevent full planetary annihilation, we require the help of **YOU and your COMMUNITY**. Use the **Helios Extension** to operate The Bunker, construct and deploy The Defense Module, and save all life on Earth.

Godspeed and Good Luck.

Basic Mechanics

The Helios Extension is your primary interface for playing the game and SAVING EARTH!
As a Streamer, the extension allows you to:

01

Choose a Mission

Each Mission focuses on a specific *Module* of the Rampart Initiative Rocket. Choose which one you want to build!

02

Receive “*Refined Materials*” from viewers

Viewers will be crafting *Refined Materials* using the *Raw Materials* that they earn by watching participating streams.

Viewers can transfer these *Refined Materials* to YOU the Streamer. You will use these to complete your mission!

03

Craft “*Components*” using “*Refined Materials*”

Components are used to build your selected *Module*

Each *Component* requires specific *Refined Materials*. Use the *Refined Materials* sent to you by your viewers to craft these *Components*

Be sure to tell your viewers *which Refined Materials* you need!!

04

Build your “*Module*” to complete the mission

Once you have crafted all the necessary *Components* you are ready to build your *Module*!

This is a very cool and special event...when you confirm your build, you will see the bunker on /twitchgaming come to life in real time, as high tech robots construct your Module and send it through the activated portal!

Be sure to show the /twitchgaming channel on your stream when this happens!

Basic Mechanics

01

Collaborate!

Not *all* of the required Raw Materials can be earned on any *one* channel...viewers will have to watch multiple participating channels to acquire all the raw materials they need. A directory of channels can be found in the extension!

02

Play multiple Missions!

After you have completed a mission, you will be able to select a new one to work toward. Can you complete them all!?

03

Level Up!

Crafting *Components*, building *Modules*, and completing *Missions* all give you XP and level up your profile. These XP levels can make you and your channel eligible for special prizes during the "Finale Event"...

04

Join the Discord!

In the extension is a link to the Helios Discord. Here you can connect with other players, coordinate strategies, and ask questions to help make your experience fun and easy!

Streamer Guide

FAQ

How do I install/activate the extension?

- Click on the icon at the right of the stream you are watching, when hovering on the stream on the Hub.

How do I know what material I drop regularly?

- This is not disclosed information. You should ask your viewers!

What does it mean when a refined material/module is common? Uncommon? Rare?

- The rarity level of a refined material/component is affected by the rarity of the raw material needed to craft it.

Can I participate/transfer materials as a viewer on other streams?

- Unfortunately, due to technical restrictions, it is not possible at this time. Once a streamer, always a streamer.

Can I “refund” material that has been sent to me by accident?

- Unfortunately, no. This is why we added an additional confirm panel so that your viewers can double check their transfers.

I’m stuck as I only need this ___ material to be able to craft this ___. How do I get it?

- Ask your viewers!
- By subbing to you and creating hype trains, your viewers will get rarer materials. If you can, encourage them to subs or donate bits!

Does the extension work for all my viewers?

- Yes, if they have the extension installed and have authorized it.

What does my level mean?

- It's for the streamer leaderboard. To improve your Level unlock badges by completing achievements and crafting! To see your achievements, go to the first icon on the Profile panel and they will show in the Achievements section.

What do the "Achievements" do?

- They give you additional XP points to increase your level and climb in the leaderboard.

I know I have achieved this ___ reward, but it does not appear in my "Achievements" section.

- There can be a delay up to a few minutes between the moment that you earn a reward and the moment it appears in your inventory.

Recommendations

Join the Discord!

- <https://discord.gg/project-helios>
- You will have access to a restricted section where you can talk and help each other, have your own technical support platform and suggestions support!
- Make a list of your best Mods so they can also have access to this section and send it to **Chrystabel#2782** or through your contact at Twitch.

Keep the stream of the Hub open if that's possible.

- You will be able to keep better track of your progression and receive notifications when your viewers sends you refined materials.

Make a scene in you OBS (or the program you are using to stream) with that stream of the Hub.

- It would be more engaging if you show your screen of the Hub's stream when you're crafting components and, most importantly, when you're assembling a module.
- If you already have a web window one or full screen one, then you might not need one.

Send these documents to your mods so they can help you and your viewers while you stream.

- However, please make sure this is not distributed to other people.

There will be a Helios tag and category made on Twitch.

- For your stream, you can put it under the "Helios" category if you wish. However, we encourage more to put it under your regular category, but we highly recommend to use the tag.

Have fun!
