## Religious Organization Information

## About Mobie Alert

Mobie Alert is a comprehensive information and safety network that enables religious organizations to protect their congregations, employees, and property through a mobile location-based emergency alert and notification system. When you subscribe to Mobie Alert's services, your congregation will have the power to know what the danger is and warn everyone in real time. Time, knowledge and quick actions can save lives.

The Business Account is the ideal account type for any religious organization. It has three types of members with different functions. This allows the greatest control of resources and information for the benefit of the organization and its constituents. The types are:

- Initiator—Authorized to launch emergency alerts only.
- Security—Authorized to launch both emergency alerts & notifications.
- Notifier—Receivers of all alerts only.

The Business Account can create three preset emergency messages for specific emergencies and four preset cautionary messages for general awareness broadcasting. All messages can be updated as needed. In addition, two unique Mobie Alert features are:

- Alert-On-The-Go—Security creates specific messages based on the evolving situation and provides updates to Notifiers.
- Security-Assisted Alert—All members can contact Security personnel directly for assistance.

## Power of Mobie Alert

Mobie Alert lifts the "fog of don't know" by providing circle members with the basic information they need in order to analyze and act. It provides the following information:

- Who—who is calling for help or warning of danger.
- What—what is the danger or problem.
- Where—where is the danger or problem.
- When—notes the date and time of the emergency or problem.

## How does Mobie Alert do this?

The religious organization's administrator can create 3 preset emergency alert messages and 4 preset cautionary messages. Here are some examples:

### Emergency alert messages:

- Armed intruders in building. Lockdown. Stay away.
- Bomb threat. Evacuate building immediately.
- Assault on congregation. Get to safety.

### Cautionary notification messages:

- Vandalism of property. Report what you see & hear.
- Protestors outside. Cautious entering & exiting building.
- Credible hate threat. Stay home. Information following.

These preset messages can be sent anytime and anywhere to every circle member. If these preset messages don't apply, it's easy for any Security member to create a circumstance specific message: "Fire in storage room. Evacuate, clear & contain." These circumstance specific messages inform religious organization members immediately of the situation and what to do. This power is light years ahead of the old and out-dated method of simple fire alarms.

## How Mobie Alert Works

After an emergency alert is sent, our app prompts the sender to contact 911 for emergency responders' assistance. In the meantime, all congregation members immediately receive the emergency alert and open it to view the main forum. On the forum, authorized members can communicate with each other, post relevant images, and decide on courses of actions until governmental assistance arrives, if necessary.

Our app performs roll call of checked-in members, provides their health status at that moment (e.g., OK, mild injury and critical injury), the GPS location of injured members, and the GPS location of the nearest medical centers and police. In addition, all communication data can be saved for records and proofs for insurance claims and legal needs.

Mobie Alert connects all members into a circle that allows everyone to look out for each other and the organization as a whole. We harness the power of the one and the many so that with information, members can effectively respond to the situation for the safety of all.

The power to act and save lives is based on knowledge!
