Donkey Kong Games Gaming Chairs Kirby Games Mac Games Mario Games Minecraft Games Nintendo 3DS Games Nintendo Console Nintendo Switch Cases Nintendo Switch Station Charging Controller Nintendo Switch Games Nintendo Switch Playstands PC Games PC Joysticks PlayStation Transfer cases just as the world of computers, video game systems are constantly getting better. A new technology designed specifically for video game systems, a bandage with other new technologies such as DVDs. So how big are the three matches against each other? Let's look at each system based on specific criteria. Let's start with processors. The PlayStation 3 uses a cell processor. Developed by Toshiba and IBM specifically for the gaming system, the concept of this processor was to create a chip that acted like a biological cell in the body. These are distributed calculations on a single chip. Cell processors can collaborate with each other, making it possible to create virtual supercomputers by linking multiple cell processors together. The Xbox 360 processor is IBM's custom Power-PC processor. It has three symmetrical cores that run at a frequency of 3.2 gigahertz (GHz) each. This processor has many horsepower, but it lacks the cell architecture of the PlayStation 3 design. The Nintendo Wii processor isn't as impressive. It's an IBM Broadway 729 megahertz (MHz) processor. While the chip isn't in the same league as its competitors, Nintendo executives say the processor is more than powerful enough to provide a fun gaming experience. Next, let's look at the graph. The PlayStation 3 uses an RSX graphics processor (GPU) that runs at 550 MHz. The Xbox 360 has an ATI 500 MHz GPU. The 243 MHz ATI Hollywood map feeds the graphics for the Nintendo Wii. PlayStation has an advantage on specs, although some gamers say they feel Xbox makes better use of its capabilities than PlayStation. Meanwhile, Nintendo says the company wants to focus more on making games fun and less on fueling graphics. Audio is a similar story. The PlayStation 3 and Xbox 360 can provide Dolby surround sound. The Nintendo Wii can produce stereo sound and simulate surround sound, but once again its specs lack the other two. All three systems can connect to the Internet. Microsoft's Xbox Live service is perhaps the strongest presence in console internet games, but Sony is trying to change that. Nintendo made loyal fans very happy when it announced gamers would be able to purchase and download many classic games to the Wii system. All three companies are also exploring social media apps through these video game systems. The PlayStation 3 is also a Blu-ray DVD player that can give it an edge over two other consoles. For people who want a Blu-ray player and gaming system, the PlayStation 3 is an attractive choice. Before the high-definition disc ends Microsoft released an external HD DVD that users could connect to their Xbox 360 console, but ceased production in February 2008 after the HD DVD format abandoned the ghost [source: GamerScore Blog] For hardcore gamers, the choice usually comes down to a PlayStation 3 or Xbox 360. While the specs seem to prefer Sony's console, other considerations, such as gaming libraries and online gaming, may lure gamers to Microsoft. Some gamers like to look at backward compatibility - can new systems play games designed for older systems? PS3 can play some games designed for the original PlayStation, but not PS2 titles. The Xbox 360 can play most Xbox games, but there may be compatibility issues with some games. He turns to casual gamers - people who aren't necessarily interested in dedicate hours of time to hone their skills and become game masters. Hardcore gamers can enjoy wii games too. Even though the bloodshed of gamers 360 and PS3 is syming, the Wii seems to have a wider appeal. Which video game console will reign higher? Microsoft, Sony and Nintendo all claim that their respective console will sell most units. But no matter which company comes out on top, it's safe to say that all gamers are winners. On the next page we will look at some interesting facts about game consoles. Opinions expressed by contributors to entrepreneurs are their own. Admit it. You've played solitaire, sapper or other game on your computer at work before. And you probably felt a little guilty about it. But imagine a workplace where this behavior is not frowned 100, but actually encouraged. After a recent survey by WorldWinner, a subsidiary of FUN Technologies Inc., more than 80 percent of online gamers who play on and off throughout the workday said they are able to better focus on work after the game. It is reported that 72 per cent actually rely on game breaks to help them cope with work-related stress. Fortunately for them, games at work are becoming more accepted, and in some companies this is the norm. If anything, we tell employees to play more, says John Vechey, co-founder and director of PopCap Games. Seattle-based random computer and video game developer devotes a whole room to gaming. The room can be justified, as employees must play PopCap games such as and Zuma to make improvements and suggestions. Our employees may work less, but they work smarter because they think how to make games more fun, - says Vechey.PopCap employees can even play without leaving their own tables, joining colleagues on a multiplayer game, like Halo, in the corporate network. Vechey admits that network games can sometimes become noisy. I think it's a distraction when people are screaming all over the office and it's hard for people who don't play the game, he says. But, overall, Vechey says he didn't have any major problems. And as he points out, the company's clients are proof that games at work are becoming increasingly acceptable in many different workplace cultures, including a convent where 80-year-old nuns play Bookworm and Bejeweled to relax and hone their mental skills. One of the most popular reasons for having a playroom, in addition to business goals, is to build office morale. Scott Shamberg and Rod Rakith of Critical Mass, an interactive services firm, say their playroom is not only a great recruiting tool, but is also an ideal place to engage with workers. The room has the appropriate name Hive, which belongs to the center of activity, and includes large LCD TVs, satellite TV, Dell XPS 600, iMac, Sony PSP, Xbox 360, Nintendo Wii, TiVo and many others. By interviewing potential employees, Rakith and Shamberg show the prospects of the playroom to give them a sense of the company and its culture. They say the room has helped attract younger employees, though they also point out that older employees who weren't previously gamers are also drawn to team activities like calgary's Office of xbox NHL 2007 Tourney.In addition to the social aspect of game rooms, they are also a place to relax at the end of a long day. For intellectual property attorneys at Banner & Witcoff'sWashington DC, the games are the perfect escape from a long, exhausting work schedule. We work hard as advocates, and we like playing hard, says Ross Dunnenberg, the firm's shareholder and attorney who reports on intellectual property protection in the video game industry on his blog. The firm's play area is located in the conference room, so advocates should make sure the room is free from clients and meetings before game time starts. Some nights, lawyers continue to play even after they take home. Sometimes five to 10 attorneys from the Washington and Chicago offices will sign at home to play and chat. But not all companies with game rooms deal specifically with games in their daily work. Take Edmunds.com, automotive information site, as an example. According to coo Avi Steinlauf, the goal of their playroom is to make employees feel more at home. We want our employees to enjoy being here. The games room is very much part of who we are and what we all are about, says Steinlauf. If employees want to take a break, it is recommended to visit the room, which includes Pop-a-Shot basketball, arcade-style video games and Two-person car racing game. If the crowds become too large, staff can expand the room by raising the garage door, which makes up one of the walls of the room. Surprisingly, neither Steinlauf nor any of the other companies surveyed say they have had to implement any rules or regulations regarding their play rooms. According to Vechey, the only employees who may have problems in this type of environment are those that cannot regulate themselves. But, overall, companies agree that positives outweigh any negatives, boosting office morale, creating a positive work culture and, as a result, improving employee productivity. Kindly If you're generally connected to the gaming world - either through your kids or as a gaming fan yourself - you're probably already aware of some of the most popular trends in video gaming right now. But if not, U.S. market research company NPD recently released its list of the best-selling video games of 2020 so far. The company is looking at digital and retail sales to determine which games people buy. While some longtime family favorites are still popular, violent video games, such as online multiplayer shooters, are also dominant, which may concern parents. That's why every video game comes with age ratings and content ratings from the Entertainment Software Ranking Council, making it crucial for parents to teach themselves these ratings so they can decide which video games are right for their child. Video games get a lot of attention, but parents should also keep in mind other places where their children may be subjected to violence like movies, TV and the internet. At the end of the day, parents should call when it comes to their children and violent video games, says Umang Jain, co-founder of ed tech gaming company SplashLearn.We've looked up the NPD list, as well as a list of the best-selling games of all time from IGN, a popular video game site, to identify the best video games on the market right now. We've included your ratings so you can make an informed purchase if you decide to give one of them to the gamer in your life.
