

RECOMMENDED TOOLS & RESOURCES FOR BEZEL SETTING SHAPED STONES

The SB12 claw setting student pack includes; 5 x bronze setting blanks & stones or if you prefer, ask for the 3 x silver blanks option

The recommended burs for this course are; Round bur 0.5mm, 0.8mm, 1.1mm, 1.7mm. Hart bur 1.2mm, 1.4mm, 1.6mm. Tapered 1mm

Your dividers should be good quality fine pointed precision dividers. You will also find a scalpel and scribe handy.

You will be needing good quality pliers for making setting/claw adjustments and tightening the stones.

Ensure you have good quality measuring devices. A leverage (stone) gauge is my choice.

Ring clamp or a Bench-mate will make the final stages of setting a little easier on your hands.

I generally use a micro motor for drilling & burring, but a standard pendant motor can be just as good if set up correctly.

For a smooth bezel finish I recommend using electric hammer tools such as a Dremel with modified tips.

You will need to make tools such as, claw tip shaping tools pusher & gravers. The course will show you how to make or prepare them.
