

System Center Configuration Manager

An on-prem product that organizations can use to manage Windows PCs, Mac OS PCs, and servers. It allows organizations to customize application management, OS deployments, and even device compliance.

Azure AD Premium

A central identity store used by all EMS applications. Three levels include Basic, Premium P1, and Premium P2.

Azure Information Protection

A component of EMS that organizations can use to encrypt documents and to enforce policies on how those documents can be used.

Advanced Threat Protection

A cloud-based solution used to identify, detect, and investigate threats and malicious activities.

Enterprise Mobility + Security

Cloud App Security

Provides visibility into cloud apps and services, as well as analytics for identifying and mitigating security threats.

Microsoft Identity Manager

Combines Microsoft's identity and access management solutions together.

Advanced Threat Analytics

Used by organizations to detect suspicious activities and malicious attacks.
