

KIDNAPPINGS IN PARADISE

Chinese nationals have increasingly become targets of kidnapping in Thailand, particularly in connection with transnational criminal syndicates operating scam centers across the Thai-Myanmar border. The kidnappers are predominantly Chinese crime syndicates, many of which have established bases in Myanmar's lawless border zones such as Myawaddy and Shwe Kokko. These groups are often linked to Chinese triads and collaborate with local militias, including the Karen Border Guard Force, to facilitate the illegal transport of victims across borders. In several cases, Thai nationals have acted as local facilitators, assisting in the abduction and transit of victims to Myanmar. Forces (SAF), with significant autonomy.

The primary targets of these kidnappers are young Chinese nationals, especially students, models, actors, and job seekers. Many victims are lured through deceptive job offers, such as casting calls, modeling opportunities, or promises of lucrative employment. Others fall prey to romance scams initiated on social media or dating apps, where criminals build trust before persuading victims to travel to Thailand or border regions under false pretenses. A distinct method known as "virtual kidnapping" has also emerged, in which victims are manipulated over the phone to isolate themselves, after which families in China are extorted under the belief that their loved one has been kidnapped.

In the last two years, from mid-2023 to mid-2025, nearly 1,800 Chinese nationals have been confirmed as kidnapping or trafficking victims linked to scam centers operating between Thailand and Myanmar. However, Chinese media reports and statements from Thai police suggest that the actual number of Chinese trafficked into Myanmar for forced labor in scam operations may exceed 70,000 per year.

This significant figure reflects not only the scope of the criminal networks involved but also the alarming frequency of such cases, many of which remain underreported or unresolved.

Several high-profile kidnapping cases involving Chinese nationals have emerged during this period. In October 2024, three Chinese students were kidnapped in Thailand's Tak province after being lured from Bangkok to Mae Sot. The kidnappers demanded a ransom of 1.5 million baht, equivalent to approximately USD 40,000. The students were held for about five days before Thai police intervened and secured their release. In January 2025, the actor Wang Xing disappeared after arriving in Mae Sot, having traveled from Shanghai. He was abducted and transported to the notorious "Apollo Park" scam center in Myanmar. Wang was rescued four days later in a cross-border operation involving authorities from Thailand, Myanmar, and China. In June 2025, a 25-year-old Chinese model known by the surname Zhong was lured to Thailand under the pretext of a photoshoot. She was subsequently taken to Myanmar and held captive in a scam compound before being rescued in early July 2025, likely after several weeks in captivity.

Another notable case involved a Chinese student studying in Australia, referred to in media reports as "Amber." She was ensnared in a virtual kidnapping scheme, trafficked to Thailand, and held under threats of organ harvesting and sexual violence unless her family paid a ransom of eight million yuan, roughly USD 1.1 million. Amber was held for approximately a week before authorities managed to locate and rescue her.

In addition to these individual ransom kidnappings, there is a more insidious form of captivity tied to the scam industry proliferating in Myanmar. Victims like Wu Yonghui, a Chinese national, were trafficked into Myanmar and enslaved in scam centers for extended periods. Wu was held for about nine months, during which he endured torture and forced labor, until he was eventually rescued. These scam centers do not typically demand ransom; instead, they exploit victims as labor to perpetrate online fraud, often targeting individuals globally through investment scams or romantic deception.

Ransom demands vary depending on the method of kidnapping. In straightforward ransom cases, the demands usually range between USD 30,000 to 60,000, with captivity lasting between four to fourteen days. Virtual kidnappings can involve demands exceeding USD 1 million, with victims typically held for about a week. In cases where victims are trafficked to scam centers, there is often no immediate ransom demand; instead, victims are subjected to months of forced labor, abuse, and inhumane conditions, with some captivity periods extending beyond six months.

This surge in kidnapping and trafficking cases has had a pronounced impact on Thailand's tourism industry, particularly with respect to Chinese visitors, who traditionally represented the largest segment of foreign tourists. Safety concerns stemming from these kidnappings, widely publicized in Chinese media, have directly contributed to a significant downturn in Chinese tourism to Thailand. In the first half of 2025, Chinese tourist arrivals fell by 34 percent compared to the same period in 2024, decreasing from approximately 2.9 million to 2.27 million. This represents a loss of around 640,000 Chinese visitors within just six months. The broader international arrival numbers also declined by 4.7 percent, from 17.5 million to 16.6 million. Fear of abduction has led to over 10,000 trip cancellations

from China during peak travel seasons such as the Lunar New Year, severely impacting revenue streams in Thailand's tourism sector.

Thailand's economy, heavily dependent on tourism which contributes around 20 percent of its GDP, has felt the strain. The decline in Chinese tourists has had a cascading effect on hospitality sectors, including hotels, restaurants, and tour operators, particularly in key destinations like Bangkok, Phuket, and Chiang Mai. In response, Thai authorities have implemented measures aimed at restoring confidence among travelers. The government has introduced "Safe Travel" certifications for hotels, shopping malls, and tour agencies to reassure tourists of their security. Additionally, promotional campaigns such as "Nihao-Sawadee" have been launched to attract Chinese visitors back to the country. These efforts are complemented by incentives like charter flight packages and bids to host international events such as Formula 1 races to diversify the tourism base and mitigate dependence on any single national demographic.

Regionally, the dynamics along the Thai-Myanmar border have facilitated the growth of these criminal enterprises. Scam compounds such as KK Park and Shwe Kokko have become infamous for their association with human trafficking and forced scams. Thailand's Mae Sot serves as a critical transit point, where victims are often abducted before being smuggled across the Moei River into Myanmar. This border area has proven difficult to police effectively due to the presence of armed militias and limited state control. The escalation of these kidnappings has prompted joint efforts by China, Thailand, Myanmar, and regional organizations like ASEAN to crack down on scam centers. Authorities have launched coordinated raids, shut down power supplies to criminal hubs, and initiated repatriation efforts for thousands of victims.

The Chinese government has increased its diplomatic pressure, sending officials to the Thai-Myanmar border to facilitate rescue operations and monitor enforcement activities.

Psychologically, the impact on victims has been severe. Many report experiencing torture, including beatings, electric shocks, and other forms of physical and mental abuse. Some victims have been dehumanized further by having their heads shaved and being subjected to constant threats. The ongoing efforts to dismantle these networks have led to some success, but the scale of the problem remains significant, with estimates suggesting that tens of thousands may still be held in scam centers across Myanmar.

Recent high-profile cases underscore the severity of the crisis. The abduction of Wang Xing in January 2025 and the rescue of model Zhong in July 2025 highlight the continued risks for Chinese nationals lured by seemingly legitimate opportunities. These incidents have received extensive media coverage, raising awareness but also revealing the persistent vulnerabilities that exist due to poor border enforcement and sophisticated criminal tactics.

In summary, the kidnapping of Chinese nationals in Thailand is closely linked to transnational crime networks exploiting regional instability and weak governance along borders. The victims, often young and seeking better prospects, are deceived into dangerous situations where they are either held for ransom or trafficked into brutal scam operations in Myanmar. Ransom amounts range widely, with conventional kidnappings demanding tens of thousands of dollars, while virtual kidnappings seek multimillion-dollar payouts. Time in captivity can

span from a few days to several months, depending on the criminal objective. The high-profile cases of Wang Xing, Zhong, and others illustrate both the personal tragedies involved and the broader geopolitical challenge in combating these crimes. The resultant sharp decline of 34 percent in Chinese tourist arrivals further underscores the broader economic and reputational damage to Thailand, compelling urgent reforms, international cooperation, and sustained law enforcement efforts to restore safety and confidence.

Risk Intelligence that Keeps You Safe

ABOUT THREATRATE

ThreatRate helps you benchmark your Risk Management strategy relative to the rapidly evolving globe and local trends with real-time actionable analytics and insights. Members have access to:

- Customized dashboards and Infographics
- ThreatRate experts with cross-industry depth
- 100+ risk-focused reports published annually
- API customized access option
