Long-term weather forecasts for more than 36 hours should be interpreted with caution. For more than 20 years, Earth Networks has operated the world's largest and most comprehensive weather observations, lightning detection and climate networks. We are currently using our intelligence to deliver on IoT promises. By integrating our hyper-local weather data with Connected Smart Home devices, we will delist predictive energy efficiency analysis of homeowners and utility companies. The period of time when the sun is no more than 6 degrees below the horizon at sunrise or sunset. The horizon must be clearly defined and the brightest stars should be visible in good atmospheric conditions (i.e. without moonlight or other lights). You still need to be able to conduct normal outdoor activities. The period of time when the sun is between 6 and 12 degrees below the horizon at sunrise or sunset. The horizon is clearly defined and the outline of objects can be seen artificial light. Conventional outdoor activities are currently not possible without additional lighting. The period of time when the sun is between 12 and 18 degrees below the horizon at sunrise or sunset. The sun does not contribute to the lighting of the sky until this time in the morning or after this time in the evening. At the beginning of the morning astronomical twilight and at the end of astronomical twilight in the evening, the lighting of the sky is very weak, and may be unnoticed. Civil Sunset time minus the time of the Civic Sunrise. Changing the length of daylight between today and tomorrow is also listed when it is available. Available.
