## 2017 Annual Fugitive Dust Control Report

# 2017 Annual Fugitive Dust Control Report

As required under 40 CFR Part §257.80(c), an annual Coal Combustion Residuals (CCR) Fugitive Dust Control Report must be completed for a regulated CCR unit. The initial report was due no later than 14-months after placing the initial CCR fugitive dust control plan in the facility's operating record. The Colstrip Steam Electric Station (CSES) CCR Fugitive Dust Control Plan was placed in the facility's Facility Operating Record on October 19, 2015. The deadline for posting of the initial Annual CCR Fugitive Dust Control was no later than December 19, 2016. The deadline for subsequent annual reports is 12-months after completion of the initial report, which for Reporting Year 2017 is December 19, 2017.

The annual report is complete after it becomes part of the Facility Operating Record (FOR). Below are the three elements required for the 2017 annual report:

- 1) All actions taken by the facility to control fugitive dust generated from the CSES CCR units.  
The weekly inspections identified that no corrective actions were required to minimize and control fugitive dust at the CSES CCR Units. The weekly inspection logs are kept on-file in the CSES CCR FOR.
- 2) A record of all citizens complains.  
There were no citizen complaints received during the reporting period.
- 3) A summary of any corrective measures taken to mitigate fugitive dust generation.  
No corrective action measures were taken (see #1 above).

As required under 40 CFR Part §257.106(g), after posting the initial and subsequent Annual CCR Fugitive Dust reports to the facility operating record, notification of the posting must be made to the MDEQ Remediation Division.

This report is also required to be posted to the publicly available web-site as required under 40 CFR Part §257.107(g).
