The Travel Trends Index measures the direction and pace of travel volume to and within the U.S. on a monthly basis. The index includes a Current Travel Index (CTI) and a Leading Travel Index (LTI). Both the CTI and the LTI include subcomponents (domestic, international, leisure and business).

CTI reading of **51.5** in **April 2019** indicates that travel to or within the U.S. grew **3.0%** in **April 2019** compared to April 2018.

LTI predicts travel growth will moderate through October 2019, a result of deceleration across all travel segments.

Overall travel volume (person trips to or within the United States involving a hotel stay or air travel) grew at the same year-over-year rate in April 2019 as in March 2019. International inbound and domestic travel both experienced firm growth; international demand rebounded from two months of contraction, and domestic growth was supported entirely by the leisure segment.

**HIGHLIGHTS:**

- The Current Travel Index (CTI) has registered at or above the 50 mark for 112 straight months, as the industry sustains its tenth consecutive year of expansion.

- The CTI was positive in April, registering 51.5 (indicating 3.0% percent y/y growth). This is on a par with the 6-month moving average.

- International inbound expanded 5.6% in April, rallying after two months of contraction. The Leading Travel Index (LTI) continues to project that inbound travel growth will be positive, albeit slower, over the next six months, registering at or just below 1.0%.

- Domestic leisure travel extended its growth trend in April (3.2%), on par with its six-month trend. However, the business segment stalled (0.0%).

- The 6-month LTI reading of 50.9 indicates that total U.S. travel volume is expected to grow at a rate of around 1.8% through October 2019. Over the same period, domestic travel will achieve 2.0% growth, while international inbound travel will return to more moderate growth around 0.8%.
APRIL TRAVEL TRENDS INDEX (CONT.)

DETAILED RESULTS:

Domestic travel demand increased 2.6% in April, supported entirely by leisure segment growth. Business travel demand was likely impacted by both Easter and Passover, as meetings and conventions tend to shift to other months. Looking ahead, leisure travel is expected to grow at a faster pace than business travel. Vacation intentions slowed slightly but remain in healthy territory, and forward-looking bookings and searches point to continued growth.

International inbound travel recovered in April (+5.6%), reflecting the complementary effect of the Easter calendar shift that produced a sharp contraction in March. Despite the surge, international inbound growth is expected to moderate over the next six months.

Given the U.S. Department of Commerce’s recent release on international visitation statistics, the TTI has proven a good indicator of inbound travel. The Index correctly predicted the strong growth in international arrivals in the first half of 2018 as well as the slowdown in the second half—particularly in the final quarter—of the year.

DAVID HUETHER
Senior Vice President, Research

The Oxford/U.S. Travel Current Travel Index (CTI) measures the direction and pace of travel volume to and within the U.S., on a monthly basis compared to the same month in the prior year. The index is comprised of a weighting of hotel room demand and air passenger enplanements that represents the overall volume of travelers each month. A score above 50 indicates expansion. A score below 50 indicates decline.

The Oxford/U.S. Travel Leading Travel Index (LTI) is an indicator of the future direction and pace of travel volume to and within the U.S. over the coming three and six months compared to the same period in the prior year. The LTIs represent average readings over the next three and six months. The LTI econometric model is based on data sets that have demonstrated to predict near-term future travel: online travel searches and bookings for future travel, consumer travel intentions data, and economic fundamentals. A score above 50 indicates expansion. A score below 50 indicates decline.
MARCH TRAVEL TRENDS INDEX (CONT.)

Domestic travel is expected to grow around 2.6% year-over-year through October 2019, with leisure contributing to the expansion slightly more than business. Consumer confidence improved incrementally, but subdued consumer spending and business investment are expected to weigh upon both the business and leisure segments. Renewed escalation of trade conflicts and the resulting manufacturing uncertainty contribute to tepid expectations for business investment growth in 2019.

International inbound travel demand was boosted by the Easter calendar shift, rebounding from contractions in February and March and registering 5.6% year-over-year growth in April. Looking ahead, we expect growth to return to a more modest level and hover just below 1.0% over the coming six months. Soft global economic activity, prolonged and growing trade tensions, and uncertainty surrounding the Trump administration remain major risks to international traveler sentiment. Ongoing U.S.-China, U.S.-Mexico-Canada, and U.K.-Eurozone trade discussions, if resolved, may ease these downside risks.

Adam Sacks, President of Oxford’s Tourism Economics group says, “The resilience of U.S. economic data in the face of cooling domestic and international momentum suggests that consumer spending and business investment will continue on a gradual softening path, avoiding a precipitous drop or immediate recession. In turn, domestic and international travel demand are expected to grow at a decelerating pace.”

Please note: The Travel Trends Index is based on public and private sector source data which are subjected to revision by the source agency.

The Oxford/U.S. Travel Current Travel Index (CTI) measures the direction and pace of travel volume to and within the U.S. on a monthly basis compared to the same month in the prior year. The index is comprised of a weighting of hotel room demand and air passenger enplanements that represents the overall volume of travelers each month. A score above 50 indicates expansion. A score below 50 indicates decline.

The Oxford/U.S. Travel Leading Travel Index (LTI) is an indicator of the future direction and pace of travel volume to and within the U.S. over the coming three and six months compared to the same period in the prior year. The LTIs represent average readings over the next three and six months. The LTI econometric model is based on data sets that have demonstrated to predict near-term future travel: online travel searches and bookings for future travel, consumer travel intentions data, and economic fundamentals. A score above 50 indicates expansion. A score below 50 indicates decline.
The *Current Travel Index (CTI)* measures monthly travel volumes in the U.S., including both domestic and international inbound travel. A score over 50 indicates an expansion in travel relative to the same month the prior year.

The index measures person trips that involved a hotel stay and/or a flight.

The following methods and sources are used to estimate (1) total travel; (2) international visitations; and (3) domestic travel (which is the residual of total travel minus international visitations):

1. **Total travel (domestic and international):** Total travel is calculated based on hotel stays of domestic and international travelers as well as air travel of domestic travelers. While most international visitors are assumed to stay in hotels, domestic travelers often do not. As such, the domestic travel estimate is further informed by domestic air enplanements to help capture the entire domestic market. STR provides monthly data on hotel room demand, and domestic air passenger enplanements are calculated based on monthly investor relations reports for all major domestic airlines. The research firm TNS provides representative data on U.S. travelers to determine the average length of stay, persons per traveler party, and the proportion of hotel guests who also fly. The CTI encompasses three traveler types on these bases that are shown below with their basic calculation.

<table>
<thead>
<tr>
<th>HOTEL GUESTS &amp; FLYERS</th>
<th>HOTEL GUESTS &amp; NON-FLYERS</th>
<th>NON-HOTEL GUESTS &amp; FLYERS</th>
</tr>
</thead>
<tbody>
<tr>
<td>enplanements</td>
<td>% of flyers that stay in hotel</td>
<td>enplanements x people per trip x length of stay</td>
</tr>
</tbody>
</table>

2. **International visits:** The international component of the CTI is based on the Department of Homeland Security's Advanced Passenger Information System (APIS), which tracks international travel to the U.S., and distinguishes between foreign nationals and U.S. citizens. Visits from Canada are tracked by Statistics Canada and visits from Mexico are tracked by Banco de Mexico. Further analysis of international markets is informed by origin-destination air travel data from OAG, Sabre Market Intelligence aviation passenger data, and IATA Billing Settlement Plan data. Each of these datasets tracks non-resident air travel to the U.S. by country of origin based on unique sources. Official estimated of international visitation to the U.S. (I-94) are released by the U.S. Department of Commerce on approximately a four-month lag. As this data becomes available, historic CTI estimates will be revised.

3. **Domestic travel:** The domestic component of the CTI is measured as the residual of total travel minus international. The domestic leisure travel component is based on STR room demand data that is segmented by type of property and day of the week. A domestic leisure travel proxy has been developed based on the location, type of property, and day of the week of travel. Domestic business travel is measured as the residual of total domestic travel minus domestic leisure travel.

The **Leading Travel Index (LTI)** measures the likely average pace and direction of U.S. travel volumes over the coming three and six-month periods. A reading over 50 indicates an expansion in travel relative to the same period last year.

The LTI econometric model includes three categories of information that have shown a strong predictive capability of short-term travel trends. High frequency macroeconomic data capture underlying movements in the labor market, exchange rates and company performance. Consumer sentiment data from the Conference Board provide a long-term trend of consumer attitudes that can be tracked with future travel patterns; online search and bookings data provide a window into traveler planning based on data from ADARA and nSight, and data from ARC measures bookings.
ABOUT THE U.S. TRAVEL ASSOCIATION
The U.S. Travel Association is the national non-profit organization representing all components of the travel industry, which generates $2.5 trillion in total economic output and supports 15.7 million American jobs. U.S. Travel’s mission is to increase travel to and within the United States.

ABOUT OXFORD ECONOMICS
Oxford Economics is one of the world’s foremost independent global advisory firms, providing reports, forecasts and analytical tools on 200 countries, 100 industrial sectors and over 3,000 cities. Its best-of-class global economic and industry models and analytical tools give it an unparalleled ability to forecast external market trends and assess their economic, social and business impact.

DATA CONTRIBUTORS
The U.S. Travel Index project is dependent upon unique datasets to track and predict travel trends. The U.S. Travel Association and Oxford Economics wish to thank the following organizations for their significant contributions:

ADARA serves leading travel brands by delivering critical intelligence that drives personalization and relevance throughout the customer’s journey, resulting in more meaningful and profitable relationships. Fueling these insights is ADARA’s data co-op which connects over 200 leading travel brands to create the most comprehensive view of the world’s travelers and their behaviors across brands, channels, and devices. ADARA transforms how their B2C clients leverage consumer insight at every stage—learn, act, measure and modify—to unleash the revenue potential of each individual.

Airlines Reporting Corporation (ARC) is a leading technology solutions company providing the U.S.-based travel industry with world-class business products, travel agency accreditation services, process and financial management tools, and powerful data analytics.

nSight combines the world’s largest view of consumer shopping data with predictive marketing and revenue management solutions to deliver more guests to your hotel and visitors to your destination.

STR is the leading global provider of competitive benchmarking, information services and research to the hotel industry.
