VALVE CORE TOOLS

CPS valve cores are designed for the efficient removal and replacement of damaged cores in systems under pressure. Their construction allows for the complete removal of valve cores, contributing to an accelerated evacuation and charging process. Precision machined from high-quality materials, CPS valve cores ensure long-lasting durability and leak-free service, making them a reliable choice for maintenance tasks.

BENEFITS OF A SIDE ACCESS PORT

- Enables connection of a vacuum gauge directly at the system
- Close ball valve to isolate the vacuum gauge and system from all service hoses, manifold & pump connections while performing a pressure rise test
- Eliminates possibility of introducing air into a system when transitioning from evacuation to charging process

5-2-1[®] COMPRESSOR SAVER[®]

Approved by **all major** compressor manufacturers.

Professional A/C technicians recommend the use of a Compressor Saver[®] device on residential A/C systems to extend the life of the unit's compressor.

5-2-1[®] Compressor Saver[®]

Start-up is the most punishing task for any type of electrical equipment due to the surge of current when power is first applied. A/C compressors can consume up to 45,000 watts!

The 5-2-1 Compressor Saver[®] significantly reduces the time the compressor draws high amperage at start-up by combining a powerful multi-layer starting capacitor with a smart switch to safely give the compressor the burst it needs to start up quickly and reliably, while drawing less power. Less power means lower energy bills, too.

FEATURES

- For scroll/reciprocating compressors
- 208 to 240V
- Comes pre-assembled
- 3 year product warranty

BENEFITS

- Reduces damaging in-rush current by up to 50%
- Adds years to the life of your compressor and other electrical components associated with your A/C system
- Perfect add-on service for HVAC technicians—high profit, easy and fast to install, and easy to sell
- Customers experience immediate benefits
- Homeowners save money by using less energy
- Start air conditioners that are breaking down
- Eliminate system stress

**Reduces
Damaging
In-Rush
Current up
to 50%!**

In-rush current can damage the compressor's motor and that motor may start up more than 6,000 times in a single cooling season.

Protect your customers while earning additional profits.

ADD YEARS TO THE LIFE OF THE A/C

5-2-1® Compressor Saver provides the A/C compressor with a precise boost during start-up. As a result, the compressor stabilizes faster, exposure to heat is reduced and the compressor life is extended.

PRO-SET® 5-ft SAFEMATE™ HOSES

Available with ball valve end on yellow hose instead of SafeMate™ valve

HOSES AND ACCESSORIES

All hoses feature a solid brass T-shaped SafeMate™ valve on one end, and an open, straight brass valve nut on the other.

SafeMate Valves – Have a screw down core depressor that activates refrigerant flow after the Brass Valve Nut has been fully tightened onto a service port. This prevents refrigerant from escaping into the atmosphere.

Red, Yellow Or Blue Offset Knobs – Keep hands away from the service port and help prevent refrigerant burns.

Swivel “T” Valve – Once attached, the innovative “T” valve swivels above the Brass Valve Nut so it won’t loosen if a hose is moved during use.

4 Layer Construction With Hose Barrier Lining – Minimizes refrigerant loss vs conventional hoses.

FEATURES

- UL recognized (File SA11622)
- Nylon permeation barrier (Meets SAE J2196)
- Extra deep knurling on nuts for easy grip
- Adjustable valve core depressor

SPECIFICATIONS

- **Hose Permeation Rate:** ≤1.01 Lbs/ SqFt/Year (≤4.9 Kg/m2/Year)
- **Burst Pressure:** ≥4000 psi (27.6 Mpa)
- **Maximum Working Pressure:** 800 psi (5.51 Mpa)
- **Tensile Pull per SAE J2196 and SAE J2888:** Minimum pull force to separate hose from coupling: 120 Lbs (≥534 N)
- **Refrigerant Compatibility:** CFC, H/ CFC, HFC, HFO
- **Patents:** Taiwan #1637133, Japan #640222, China #201710540651

Copper coil

MT69SS

Molecular Transformator

Stainless steel coil
For use with Class A1, A2, A2L and A3 refrigerants

THE TIME NEEDED TO RECOVER 15 LB OF R-22 AT 120°F IS 32 MINUTES. USING THE MT69, IT TAKES ONLY 17 MINUTES!

The effects of ambient temperature and elevated tank pressures on the speed of the refrigerant recovery process are in many cases more important than the speed of the recovery machine itself. As ambient temperature increases, pressure in the recovery cylinder increases, reducing the recovery speed and in many cases can lead to a high pressure shutdown as the recovery equipment and tank pressure limits are reached.

The CPS Molecular Transformator reduces the temperature and pressure of recovered refrigerant during the recovery process, dramatically improving the recovery speed and high ambient temperature performance of all commercially available recovery machines in addition to extending the life of the equipment.

REFRIGERANT CYLINDER HEATER STRAPS

Charge faster in cold weather

These durable straps are ideal for use on portable refrigerant charging or recovery tanks, especially in cold weather when transfer times tend to increase or when a tank is low on refrigerant. They function by creating a positive pressure between the refrigerant tank and an A/C or refrigeration system, thereby reducing the time required for refrigerant transfer.

BLACKMAX® FAST-VAC CONNECTION FITTINGS

For all vacuum pumps with 1/4", 3/8" and 1/2" SAE male ports

NEW

Stainless steel construction

Reduces evacuation time

BlackMax Fast-Vac Connection Fittings are designed to dramatically reduce evacuation time in HVAC systems. These innovative fittings with all stainless (non-rusting) bodies feature a large inner diameter ensuring unrestricted full flow.

- **Innovative Design:** The unique "Y shaped" design of these fittings integrates merging flow paths with a spacious internal diameter, significantly reducing friction and enabling superior full flow. This stands in stark contrast to T-Fittings, which have opposing flow paths and a narrower internal diameter, resulting in increased resistance and reduced flow rate.

- **Easy Simultaneous Connections:** Reduce your work time by connecting 2 vacuum hoses to a single fitting without the drawbacks of traditional manifolds.
- **Enhanced Performance:** Increases the speed of any vacuum pump with 1/4" Male, 3/8" Male or 1/2" Male SAE port connections.
- **Versatile:** Available in 3 sizes, BlackMax Fast-Vac Connection Fittings feature two male 3/8-inch SAE flare fittings for service hoses and come in 1/4-inch, 3/8-inch and 1/4-inch female flare sizes.
- **Packaging:** Fittings are packed in attractive "blister" cards, ideal for showroom displays.

VACUUM PUMP OILS

PRO-SET® PREMIUM VACUUM PUMP OIL
Pro-Set Premium Vacuum Pump Oil is extremely high quality, severely hydro-treated oil and can be used in vacuum pumps made by most manufacturers. It has low vapor pressure and better chemical stability vs. conventional oils and results in an excellent lubricant for vacuum applications.

To extend the life of your pump vacuum pump oil should always be clean and free of contaminants such as moisture, acids, vapors, dirt etc. So, change it after each use with Pro-Set Premium Vacuum Pump oil (available in pints, quarts and gallons).
