

EZ-LIGHT® K50 and K80 Series Pick-to-Light Sensors

Datasheet

For the latest technical information about this product, including specifications, dimensions, and wiring, see www.bannerengineering.com.

- Rugged, cost-effective, and easy-to-install solutions for error-proofing and parts-verification applications
- Compact devices are completely self-contained - no controller needed
- Illuminated dome provides an easy-to-see green job light; some models also light red for alternate operation
- Push-button and passive-actuation models available
- Choose NPN or PNP output, depending on model
- Fully encapsulated IP67 construction — ideal for use in abusive environments; rated to IP69K, depending on installation; see specifications
- Immune to ambient light, EMI, and RFI interference
- 12 to 30 V dc operation

Standard Models — 1 Color

- Green job light is ON at all times while job input is active
- Presence of hand (or pressing push button) activates output
- Integral 4-pin M12/Euro-style quick disconnect fitting models are listed.¹

C-Series 2-Color Models

- Job light is green at all times while job input is active (unless hand is present)
- Presence of hand (or pressing push button) activates output and overrides job light (turns red) for visual verification that action was sensed
- Retroreflective models: To simplify alignment, sensor provides Red signal when retroreflective target is not correctly aligned
- Integral 4-pin M12/Euro-style quick disconnect fitting ³

WARNING: Not To Be Used for Personnel Protection

Never use this device as a sensing device for personnel protection. Doing so could lead to serious injury or death. This device does not include the self-checking redundant circuitry necessary to allow its use in personnel safety applications. A sensor failure or malfunction can cause either an energized or de-energized sensor output condition.

Overview

The K50 & K80 Pick-to-Light Sensors are suited to many part assembly and bin picking (pick-to-light) applications.

The entire translucent dome provides the green job light or other indication (depending on model), for high visibility. The solid-state output easily interfaces to a system controller, which is pre-programmed for a specific sequence of tasks. Mounted in or near each bin in an assembler's work station, the sensor job light signals the assembler:

- Which bins contain items to be picked in a given operation; and
- In what order they should be picked.

As the assembler takes a part in sequence, the K50 or K80 senses a hand in the bin and its output sends a signal to the controller. (For push-button models, the sensing occurs when the button is pushed. For other models, no action other than reaching for the part is required for the sensor to detect when a pick is made.)

⁵ The integral 4-pin M12/Euro-style quick disconnect fitting models are listed.

- To order the 2 m (6 ft) PVC cable models, omit the suffix "Q" from model number (e.g., "K50RPLPGREQ").
- To order the 9 m (30 ft) PVC cable models, replace the suffix "Q" with "W/30" (e.g., "K50RPLPGREQ W/30").
- To order the 150 mm (5.9 in) PVC pigtail with 4-pin M12/Euro-style quick disconnect fitting models, replace the suffix "Q" with "QP" (e.g., "K50RPLPGREQP").

⁶ N.O. = Normally Open; N.C. = Normally Closed

The system controller then verifies if the correct part was taken and may respond by turning that job light OFF and activating the job light of the next bin in the sequence. If multiple parts are to be removed from one bin, the job light may remain ON until the appropriate number of signals is returned to the controller. If an incorrect part is selected, the control system may be wired to signal an alarm for the assembler and/or a supervisor, or it may be programmed to interpret the action as a call for parts.

The job light system results in increased efficiency (due to simplified job training), increased quality control (no skipped components), and reduced rework and inspections. It speeds the resumption of work after breaks and other distractions and is ideal for multilingual workplaces where communication is an issue.

The fixed-field and retroreflective-mode models require no interaction to operate, and so eliminate the hand, wrist, and arm stresses associated with mechanical push buttons. All models are immune to EMI, RFI, and ambient light interference. The polycarbonate and nylon housing is capable of absorbing high impact (even at low temperatures) and is resistant to abrasion and to damage by most chemicals. Its domed construction allows most dust and debris to slide easily off the sensor housing, simplifying maintenance. The 30 mm threaded base on all models provides easy mounting. Indicator behavior is shown in the table below.

Indicator and Output Behavior

NOTE: "D," "C," and "E" Series models as referenced in the table pertain to a part of the product model number, immediately preceding the Q designation.

Models	Sensor Conditions		Job Light	Alternate Indicator	Output Signal Status
Standard (D-Series)	Job input active	Hand/pick absent	ON Green	—	OFF
		Hand/pick present	ON Green	—	ON
	No job input	Hand/pick absent		—	OFF
		Hand/pick present		—	ON
C-Series	Job input active	Hand/pick absent	ON Green	—	OFF
		Hand/pick present	—	ON Red	ON
	No job input	Hand/pick absent	OFF	OFF	OFF
		Hand/pick present	—	ON Red	ON
E-Series	Job input active	Hand/pick absent	ON Green	—	OFF
		Hand/pick present	ON Green	—	ON
	No job input	Hand/pick absent	OFF	—	OFF
		Hand/pick present	—	ON Red	ON

Installation

For push-button models, install the sensor at such a height and in a location that will be easy for the user and/or supervisor to see the indicator and will be comfortable for the user to press the push-button.

For other models, install the sensor in a location that will be comfortable for the user to break the beam when reaching for the required part. When multiple sensors will be located in close proximity, to monitor multiple bins for example, mount all the sensors in a similar sensing position (all mounted at the tops of the bins and pointing down, for example). This may reduce potential optical crosstalk, where one sensor detects another sensor's beam.

Specifications

Supply Voltage and Current

- 12 to 30 V dc (10% max. ripple)
- < 75 mA max current at 12 V dc (exclusive of load)
- < 40 mA max. current at 30 V dc (exclusive of load)

Supply Protection Circuitry

- Protected against transient voltages (fast-transient and over-voltage) and reverse polarity

Output Configuration

- 1 current sinking (NPN) transistor or 1 current sourcing (PNP) transistor, depending on model

Output Rating

- Max load: 150 mA
- ON-state saturation voltage: < 2 V at 10 mA dc; < 2.5 V at 150 mA dc
- OFF-state leakage current: < 10 μ A at 30V dc

Output Protection Circuitry

- Protected against false pulse on power-up and continuous overload or short-circuit of output

Output Response Time

- 3 milliseconds ON and OFF

Power-Up Output Delay Time

- 100 ms

Indicators

- Entire translucent dome provides indicator light; either Job or Pick Sensed indicator inhibits the other light, depending on model
- Job "Pick" Indicator: Green
- Pick Sensed Indicator: Red or OFF, depending on model

Job Light Enable Input

- Input Impedance: 8000 ohms
- Sinking - Input low < 1.0 V
- Sourcing - Input high > 7 V

Construction

- Base: Polycarbonate
- Translucent Dome: Polycarbonate
- Push Button: Thermoplastic
- Lens: Polycarbonate or acrylic

Connections

- Integral 4-pin M12/Euro-style quick disconnect fitting, PVC-jacketed 2 m (6.5 ft) or 9 m (30 ft) cable or 150 mm (5.9 in) PVC pigtail with 4-pin Euro-style QD fitting, depending on model
- Accessory QD cables required for QD models.
- OPMA-style PUR pigtail models are also available; contact Factory for more information

Ambient Light Immunity

- Up to 5,000 lux

EMI /RFI Immunity

- Immune to EMI and RFI noise sources, per IEC 947-5-2

Environmental Rating

- Fully encapsulated: IEC IP67
- Integral QD models: DIN 40050 (IP69K) when using IP679K-rated cables
- Pigtail and cable models: IP69K when mounted with conduit

Operating Conditions

- Temperature: -40 °C to +50 °C (-40 °F to +122 °F)
- 90% at +50 °C maximum relative humidity (non-condensing)
