Terms and Conditions for Terminal Server Licenses

FotoWare Software is licensed per installed device (computer). Each device must be activated through an internet based process. Each device can be used by any number of persons, as long as the application is used by only one person at a time. This additional license is provided to grant access to the FotoStation Client software through a Microsoft Terminal Server, Citrix Metaframe or similar application server.

License Requirements

This additional license is valid as long as the customer has purchased enough device licenses to cover all named users in the organization that accesses the software. Each named user may access the software both through a local installation and through the application server.

This is not a license for concurrent use of the software. Each unique person (named user) that uses the software must have a device license, even if this license is not installed physically on any computer.

One device license is required for activation on the application server itself. (If the customer has 100 device licenses, the software can be installed on 99 computers + 1 application server and be accessed by 100 different persons.)

Acquiring Licenses for Additional Users

The Customer may allow new users to use the software without first obtaining new licenses from FotoWare, but must notify their FotoWare Partner of the additional license usage within 10 days. The cost of the license will be invoiced immediately, or according to any separate written agreements between FotoWare a.s. and the Customer. The maintenance cost will be included at the anniversary of your SMA.

Reporting and Audit Requirements

The Customer is required to report the number users of the software to FotoWare annually. This reporting is usually performed at the anniversary of the SMA. FotoWare may require a usage report up to two times per calendar year, in addition to the yearly report.

FotoWare is also entitled to audit the license use at any time throughout the year, through the use of an independent third party, at the expense of FotoWare. The Customer is required to assist in this process and provide access to all relevant data and systems, such as exports from license management systems and access to servers running FotoWare software.
