UBER for Business

Account Automation

Stop managing your Uber for Business account information—simply set it once and forget it.

UBER

Account Automation

Stop managing your Uber for Business account information—simply set it once and forget it.

Seamless Imports and Exports

Now it's easy to onboard employees and automatically update account data with our account automation feature.

- Automatically manage employees as they join or leave
- Automatically sync expense codes as they change
- Automatically pull data and generate trip reports on a regular basis

Account automation coordinates with your existing employee and expense management systems via SFTP (a widely used protocol in the travel management space), enabling you to safely and simply import information as well as export trip data for recordkeeping.

Secure Data Transfer

We use the most up-to-date security protocol available. As long as you keep your credentials safe, your data is safe.

How does it work?

Your IT team just does a one time backend integration with your existing systems via SFTP.
