Clinical Laboratory Test Update

Cancer Antigen 27.29

As a result of a manufacturer production problem, Cancer Antigen 27.29 values will only be reported up to 450 U/mL once our current supply of diluent is exhausted. We are attempting to identify a reference laboratory capable of confirming values above this range, and if such a lab is identified, we will send out such samples. When a new supply of the necessary diluent is available, results greater than 450 U/mL will once again be reported; however, this is not expected until after May 26th.

Please call Dr. Gregary Bocsi at 720-848-7050 if you have any questions or visit our website at https://www.uchealth.org/professionals/uch-clinical-laboratory/ for additional information.
