

An Open Letter on Science to Canadian Prime Minister Stephen Harper

October 21, 2014

The Right Honourable Stephen Harper
Office of the Prime Minister
80 Wellington Street
Ottawa, ON Canada K1A 0A2

Dear Prime Minister Harper,

As scientists outside of Canada committed to international cooperation in confronting threats to the planet and human health, we urge you to remove excessive and burdensome restrictions and barriers to scientific communication and collaboration faced by Canadian government scientists.

Meeting today's complex environmental and public health challenges requires the full participation of scientists around the globe. But recent reports (i, ii, iii) highlight a rapid decline in freedoms and funding extended to Canadian government scientists, which make it more difficult for them to continue research, communicate scientific information and expertise, and collaborate internationally.

A recent *New York Times* editorial, referencing the rapid development of the Alberta oil sands, went so far as to describe new communications restrictions on government scientists as "an attempt to guarantee public ignorance."

Canada's leadership in basic research, environmental, health, and other public science is in jeopardy. We urge you to restore government science funding and the freedom and opportunities to communicate these findings internationally.

Sincerely,
