

September 24, 2018

Dear Congressmembers,

We, the undersigned scientists and experts, know that the Endangered Species Act is only effective only because it relies on the best-available science to protect our nation's species from extinction and to preserve the healthy ecosystems that support us all. We therefore ask that you protect the scientific foundation of the Endangered Species Act and reject any attempts to weaken or compromise the role of science in protecting species. Further, we urge you to provide adequate resources so that the Endangered Species Act can be meaningfully implemented.

Each of us depends on the functioning of healthy natural ecosystems that make our lives possible. We Americans are fortunate to have one of the finest mechanisms in the world to protect the species that comprise those ecosystems: The Endangered Species Act. When it was signed into law, President Nixon and a broad bipartisan congressional coalition understood the enduring importance of the Endangered Species Act and its grounding in science. The Endangered Species Act has been one of our nation's most effective environmental laws to date because decisions made under its purview are based on science, not politics.

As our nation faces severe threats to its biodiversity, we must continue to do everything we can to lessen the impact of these threats and protect the rich natural heritage with which we have been entrusted. Loss of biodiversity jeopardizes the health and safety of the American public – from increased transmission of vector-borne diseases due to declining bat populations to decreased crop yield caused by the collapse of bee colonies and other pollinators.

Using the best available scientific resources at our disposal, we have prevented the irreversible destruction of many species and their habitats. The law has succeeded in preventing 99 percent of listed species from going extinct and led to the recovery of iconic species such as the American alligator, bald eagle, and Louisiana black bear. It has also been essential for ongoing recovery of Pacific and Atlantic salmon – critical parts of economically valuable fisheries.

The terms of the Endangered Species Act are sufficiently flexible to enable species conservation while allowing our economy to thrive. While listing decisions must be made solely on the best available scientific information, other factors can be taken into account when developing plans to effectively manage and recover a threatened or endangered species. The Endangered Species Act empowers scientists and federal agencies to work hand in hand with states and local communities to conserve biodiversity.

Restricting the use of science in the Endangered Species Act or making the law vulnerable to political interference, as has been the case with some recent legislative proposals, would lead to otherwise preventable species extinctions and the destruction of habitat that is essential to environmental health. Accordingly, we affirm the following

principles that we believe are consistent with the intent and purpose of the Endangered Species Act and critical to its continued success:

- **Science Is at the Heart of Preventing Extinction**

Well-established scientific processes, such as peer-reviewed science, studies conducted in accordance with sound and objective practices, and data collected by accepted methods, ensure that the science used to conserve species is independent, objective, and credible. Congress should not interfere with the scientific method by legislating or restricting definitions of science, especially when such actions could compromise the ability of scientific experts in government agencies to implement the Endangered Species Act.

- **Science Should Be Insulated from Political Interference**

Decisions relating to listings and management of species should be free from political interference. Alarming, government officials have attempted to inappropriately suppress or manipulate the science used in federal endangered species decisions or interfere with scientists' ability to carry out their work. Such interference is unacceptable and must end. Further, funding restrictions and inadequate resources imperil the effectiveness of the Endangered Species Act and should be adjusted accordingly.

- **Protecting Biodiversity Is Our Responsibility**

Biological diversity provides significant economic, social, and cultural benefits fundamental for our survival. All of our food and many of our medicines come from living organisms, which also clean the air we breathe, maintain the quality of our soils, prevent erosion and floods, and convey an enduring beauty that enriches our lives. As President Nixon stated when he signed the Endangered Species Act into law, biodiversity "is a many-faceted treasure, of value to scholars, scientists, and nature lovers alike, and it forms a vital part of the heritage we all share as Americans."

- **Scientists, Wildlife Officials, and Local Communities Work Together**

The Endangered Species Act includes mechanisms to accommodate new and evolving scientific information and more efficient management strategies, allowing de-listing of species or reclassifications of threats. The law is based on a cooperative approach that involves federal agencies; state, local, and tribal governments; and stakeholders to protect species and preserve habitat while addressing the concerns of communities and promoting healthy economic development. Americans should be skeptical of politicians who attempt to take responsibilities away from scientists and wildlife officials who work within local communities to protect wildlife.

- **Endangered Species Act Is a Critical Backstop**

The goal of the Endangered Species Act is not to list species but rather to prevent them from going extinct in the wild. States have the primary authority of protecting species and their habitats. Scientists at federal agencies like the US Fish and Wildlife Service and National Marine Fisheries Service provide scientific information to state

and local stakeholders to identify species that are threatened. Once they have done so, the organizations and stakeholders work together to develop management strategies to help stabilize populations and prevent species from becoming endangered.

Cooperation and coordination on conservation actions has successfully averted endangerment status and led to the rebound of a number of species, including the New England cottontail. It is far more effective, easier, and less expensive to protect species and their habitats than it is to try to restore them once they are critically endangered. And once they are gone, they are gone forever. Only when preventative actions fail does the final backstop in the Endangered Species Act kick in. Efforts to weaken this failsafe, disguised as efforts to reform, will only shift more species from threatened status to endangered, and from endangered to extinct.

Legislative proposals to substitute arbitrary political judgments for the Endangered Species Act's effective science-based decisionmaking are counterproductive and put the Endangered Species Act at risk. We request that members of Congress refrain from weakening the scientific foundation of the Endangered Species Act. It is of lasting importance for our common good that the scientific principles embodied in the Endangered Species Act be preserved, and that the law be fully funded and implemented.

We urge you to strongly oppose any efforts to reform the Endangered Species Act that would chip away at its scientific foundation, which would inevitably undermine the science underlying the law and lead to more species extinctions.

Sincerely,

The undersigned 1501 scientists, public health and technical experts
