INTRODUCTION

Paragraph 19 of the report of the Preparatory Committee for the International Conference on the Relationship between Disarmament and Development, 1/ to be held in Paris from 15 July to 2 April 1986, which was approved by the General Assembly in resolution 40/155 of 16 December 1985, inter alia, requested the Secretary-General to prepare "background papers, bibliographies and compilation of information and analysis relevant to the work of the Conference". This bibliographical survey of recent literature has been prepared in response to that request.

While every effort has been made to present as wide ranging a selection of analysis and views as possible, this survey should not be considered as an exhaustive listing of all the publications available on the issue of the relationship between disarmament and development. The views expressed by the various authors in the publications listed in this paper are solely their own.
