DRAFT

SUMMARY

ITEMS INSPECTED

MINOR DEFECT

MAJOR DEFECT

Summary Text (enter here)

- 4.3.1 Exterior - Wall-Covering, Flashing & Trim: Damaged Wall-Covering Material
- 4.12.1 Exterior - Exhaust Hoods: Clogged Dryer Exhaust Hood
- 13.3.1 Laundry - Laundry Room, Electric, and Tub: Missing Catch Pan Under Washer

1: INSPECTION DETAIL

Information

General Inspection Info: Occupancy Occupied	General Inspection Info: Weather Conditions Sunny	General Inspection Info: Type of Building Detached
General Inspection Info: In Attendance Client I prefer to have my client with me during my inspection so that we can discuss concerns, and I can answer all questions.		

Your Job As a Homeowner: What Really Matters in a Home Inspection

Now that you've bought your home and had your inspection, you may still have some questions about your new house and the items revealed in your report.

Home maintenance is a primary responsibility for every homeowner, whether you've lived in several homes of your own or have just purchased your first one. Staying on top of a seasonal home maintenance schedule is important, and your InterNACHI Certified Professional Inspector can help you figure this out so that you never fall behind. Don't let minor maintenance and routine repairs turn into expensive disasters later due to neglect or simply because you aren't sure what needs to be done and when.

Your home inspection report is a great place to start. In addition to the written report, checklists, photos, and what the inspector said during the inspection not to mention the sellers disclosure and what you noticed yourself it's easy to become overwhelmed. However, it's likely that your inspection report included mostly maintenance recommendations, the life expectancy for the home's various systems and components, and minor imperfections. These are useful to know about.

But the issues that really matter fall into four categories:

1. major defects, such as a structural failure;
2. things that can lead to major defects, such as a small leak due to a defective roof flashing;
3. things that may hinder your ability to finance, legally occupy, or insure the home if not rectified immediately; and
4. safety hazards, such as an exposed, live buss bar at the electrical panel.

Anything in these categories should be addressed as soon as possible. Often, a serious problem can be corrected inexpensively to protect both life and property (especially in categories 2 and 4).

Most sellers are honest and are often surprised to learn of defects uncovered during an inspection. It's important to realize that sellers are under no obligation to repair everything mentioned in your inspection report. No house is perfect. Keep things in perspective as you move into your new home.

And remember that homeownership is both a joyful experience and an important responsibility, so be sure to call on your InterNACHI Certified Professional Inspector to help you devise an annual maintenance plan that will keep your family safe and your home in good condition for years to come.

Your Job As a Homeowner: Schedule a Home Maintenance Inspection

Even the most vigilant homeowner can, from time to time, miss small problems or forget about performing some routine home repairs and seasonal maintenance. That's why an Annual Home Maintenance Inspection will help you keep your home in good condition and prevent it from suffering serious, long-term and expensive damage from minor issues that should be addressed now.

The most important thing to understand as a new homeowner is that your house requires care and regular maintenance. As time goes on, parts of your house will wear out, break down, deteriorate, leak, or simply stop working. But none of these issues means that you will have a costly disaster on your hands if you're on top of home maintenance, and that includes hiring an expert once a year.

Just as you regularly maintain your vehicle, consider getting an Annual Home Maintenance Inspection as part of the cost of upkeep for your most valuable investment your home.

Your InterNACHI-Certified Professional Inspector can show you what you should look for so that you can be an informed homeowner. Protect your family's health and safety, and enjoy your home for years to come by having an Annual Home Maintenance Inspection performed every year.

Schedule next year's maintenance inspection with your home inspector today!

Every house should be inspected every year as part of a homeowner's routine home maintenance plan. Catch problems before they become major defects.

We'll Buy Your Home Back

If your home inspector misses anything, InterNACHI will buy your home back.

And now for the fine print:

- It's valid for home inspections performed for home buyers or sellers by participating InterNACHI members.
- The home must be listed for sale with a licensed real estate agent.
- The Guarantee excludes homes with material defects not present at the time of the inspection, or not required to be inspected, per InterNACHI's Residential Standards of Practice.
- The Guarantee will be honored for 90 days after closing.
- We'll pay you whatever price you paid for the home.

Details

InterNACHI is so certain of the integrity of our members that we back them up with our **\$10,000 Honor Guarantee**.

InterNACHI will pay up to \$10,000 USD for the cost of replacement of personal property lost during an inspection and stolen by an InterNACHI-certified member who was convicted of or pleaded guilty to any criminal charge resulting from the member's taking of the client's personal property.

For details, please visit www.nachi.org/honor.

Limitations

General Inspection Info

THE CLIENT DID NOT ATTEND

REPLACE THIS VIDEO WITH A VIDEO OF YOU Talking About ...

Watch on  YouTube

We invited the client to attend their home inspection. Unfortunately, my client did not attend the home inspection. The client did not learn what the home inspector desired to teach the client about the house. The client was unable to follow the home inspector through the house and ask questions during the inspection. The client's concerns at the time of the inspection were not addressed. This was a restriction and limitation of the home inspection.

2: ROOF

Information

Roof Covering: Homeowner's Responsibility

Your job as the homeowner is to monitor the roof covering because any roof can leak. To monitor a roof that is inaccessible or that cannot be walked on safely, use binoculars. Look for deteriorating or loosening of flashing, signs of damage to the roof covering and debris that can clog valleys and gutters.

Roofs are designed to be water-resistant. Roofs are not designed to be waterproof. Eventually, the roof system will leak. No one can predict when, where or how a roof will leak.

Every roof should be inspected every year as part of a homeowner's routine home maintenance plan. Catch problems before they become major defects.

Roof Covering: Type of Roof-Covering Described

Asphalt

I observed the roof-covering material and attempted to identify its type.

This inspection is not a guarantee that a roof leak in the future will not happen. Roofs leak. Even a roof that appears to be in good, functional condition will leak under certain circumstances. We will not take responsibility for a roof leak that happens in the future. This is not a warranty or guarantee of the roof system.

Roof Covering: Roof Was Inspected

Ground

We attempted to inspect the roof from various locations and methods, including from the ground and a ladder.

The inspection was not an exhaustive inspection of every installation detail of the roof system according to the manufacturer's specifications or construction codes. It is virtually impossible to detect a leak except as it is occurring or by specific water tests, which are beyond the scope of our inspection. We recommend that you ask the sellers to disclose information about the roof, and that you include comprehensive roof coverage in your home insurance policy.

Flashing: Wall Intersections

I looked for flashing where the roof covering meets a wall or siding material. There should be step and counter flashing installed in these locations. This is not an exhaustive inspection of all flashing areas.

Flashing: Eaves and Gables

I looked for flashing installed at the eaves (near the gutter edge) and at the gables (the diagonal edge of the roof). There should be metal drip flashing material installed in these locations. The flashing helps the surface water on the roof to discharge into the gutter. Flashing also helps to prevent water intrusion under the roof-covering.

Plumbing Vent Pipes: Homeowner's Responsibility

Your job is to monitor the flashing around the plumbing vent pipes that pass through the roof surface. Sometimes they deteriorate and cause a roof leak.

Be sure that the plumbing vent pipes do not get covered, either by debris, a toy, or snow.

Roof penetrations and flashing

Plumbing Vent Pipes: Plumbing Vent Pipes Inspected

I looked at DWV (drain, waste and vent) pipes that pass through the roof covering. There should be watertight flashing (often black rubber material) installed around the vent pipes. These plumbing vent pipes should extend far enough above the roof surface.

Flue Gas Vent Pipes: Homeowner's Responsibility

Your job is to monitor the flashing around the flue gas vent pipes that pass through the roof surface. Sometimes they deteriorate and cause a roof leak.

Flue Gas Vent Pipes: Flue Gas Vent Pipe Inspected

I looked at flue gas vent pipes that pass through the roof covering.

All gas-fired appliances must be connected to venting systems. There should be watertight metal flashing installed around the flue gas vent pipes. The vent pipes should extend far enough above the roof surface.

Gutters & Downspouts: Homeowner's Responsibility

Your job is to monitor the gutters and be sure that they function during and after a rainstorm. Look for loose parts, sagging gutter ends, and water leaks. The rain water should be diverted far away from the house foundation.

Gutters & Downspouts: Gutters Were Inspected

I inspected the gutters. I wasn't able to inspect every inch of every gutter. But I attempted to check the overall general condition of the gutters during the inspection and look for indications of major defects.

Monitoring the gutters during a heavy rain (without lightening) is recommended. In general, the gutters should catch rain water and direct the water towards downspouts that discharge the water away from the house foundation.

Limitations

Roof Covering

UNABLE TO SEE EVERYTHING

This is a visual-only inspection of the roof-covering materials. It does not include an inspection of the entire system. There are components of the roof that are not visible or accessible at all, including the underlayment, decking, fastening, flashing, age, shingle quality, manufacturer installation recommendations, etc.

Roof Covering

UNABLE TO WALK UPON ROOF SURFACE

According to the Home Inspection Standards of Practice, a home inspector is not required to walk upon any roof surface. However, as courtesy only, I attempted to walk upon the roof surface, but was unable. It was not safe. It was not accessible. This was a restriction to my inspection of the roof system. You may want to consider hiring a professional roofer with a lift to check your roof system.

Flashing

DIFFICULT TO SEE EVERY FLASHING

I attempted to inspect the flashing related to the vent pipes, wall intersections, eaves and gables, and the roof-covering materials. In general, there should be flashing installed in certain areas where the roof covering meets something else, like a vent pipe or siding. Most flashing is not observable, because the flashing material itself is covered and hidden by the roof covering or other materials. So, it's impossible to see everything. A home inspection is a limited visual-only inspection.

Plumbing Vent Pipes

UNABLE TO REACH ALL THE PIPES

I was unable to closely reach and observe all of the vent pipes that pass through the roof-covering materials. This was an inspection restriction.

Flue Gas Vent Pipes

UNABLE TO REACH ALL THE FLUE GAS VENT PIPES

I was unable to closely reach and observe all of the flue gas vent vent pipes that pass through the roof-covering materials. This was an inspection restriction.

Gutters & Downspouts

COULDN'T REACH THE GUTTERS

I was unable to closely reach and closely inspect the installation of all of the gutter components and systems.

3: CHIMNEY, FIREPLACE, OR STOVE

Information

Fireplace: Type of Fireplace

Factory-Built

I tried to describe the type of fireplace.

Limitations

Masonry Chimney

CHIMNEY INTERIOR IS BEYOND THE SCOPE

Inspecting the chimney interior and flue is beyond the scope of a home inspection. An inspector is not required to inspect the flue or vent system, and is not required to inspect the interior of chimneys or flues, fire doors or screens, seals or gaskets, or mantels. Out of courtesy only, the inspector may take a look at readily accessible and visible parts of the chimney flue.

Fireplace

FIREPLACE AND STACK INSPECTION LIMITATIONS

Not everything of the fireplace and chimney stack system and components are inspected because they are not part of the Home Inspection Standards of Practice. I inspected only what I am required to inspect and only what was visible during the home inspection. I recommend hiring a certified chimney sweep to inspect, sweep, and further evaluate the interior of the fireplace system immediately and every year as part of a homeowner's routine maintenance plan.

4: EXTERIOR

Information

General: Homeowner's Responsibility

The exterior of your home is slowly deteriorating and aging. The sun, wind, rain and temperatures are constantly affecting it. Your job is to monitor the buildings exterior for its condition and weathertightness.

Check the condition of all exterior materials and look for developing patterns of damage or deterioration.

During a heavy rainstorm (without lightning), grab an umbrella and go outside. Walk around your house and look around at the roof and property. A rainstorm is the perfect time to see how the roof, downspouts and grading are performing. Observe the drainage patterns of your entire property, as well as the property of your neighbor. The ground around your house should slope away from all sides. Downspouts, surface gutters and drains should be directing water away from the foundation.

General: Exterior Was Inspected

I inspected the exterior of the house.

Eaves, Soffits & Fascia: Eaves, Soffits and Fascia Were Inspected

I inspected the eaves, soffits and fascia. I was not able to inspect every detail, since a home inspection is limited in its scope.

**Wall-Covering, Flashing & Trim: Type of Wall-Covering Material Described**

Various Materials, Brick, Vinyl

The exterior of your home is slowly deteriorating and aging. The sun, wind, rain and temperatures are constantly affecting it. Your job is to monitor the house's exterior for its condition and weathertightness.

Check the condition of all exterior wall-covering materials and look for developing patterns of damage or deterioration.

Vegetation, Surface Drainage, Retaining Walls & Grading: Vegetation, Drainage, Walls & Grading Were Inspected

I inspected the vegetation, surface drainage, retaining walls and grading of the property, where they may adversely affect the structure due to moisture intrusion.

GFCIs & Electrical: Inspected GFCIs

I inspected ground-fault circuit interrupter receptacles and circuit breakers observed and deemed to be GFCIs using a GFCI tester, where possible.

Walkways & Driveways: Walkways & Driveways Were Inspected

I inspected the walkways and driveways that were adjacent to the house. The walkways, driveways, and parking areas that were far away from the house foundation were not inspected.

Stairs, Steps, Stoops, Stairways & Ramps: Stairs, Steps, Stoops, Stairways & Ramps Were Inspected

I inspected the stairs, steps, stoops, stairways and ramps that were within the scope of my home inspection.

All treads should be level and secure. Riser heights and tread depths should be as uniform as possible. As a guide, stairs must have a maximum riser of 7-3/4 inches and a minimum tread of 10 inches.

Porches, Patios, Decks, Balconies & Carports: Porches, Patios, Decks, Balconies & Carports Were Inspected

I inspected the porches, patios, decks, balconies and carports at the house that were within the scope of the home inspection.

Railings, Guards & Handrails: Railings, Guards & Handrails Were Inspected

I inspected the railings, guards and handrails that were within the scope of the home inspection.

Windows: Windows Inspected

A representative number of windows from the ground surface was inspected.

Exterior Doors: Exterior Doors Inspected

I inspected the exterior doors.

Limitations

Eaves, Soffits & Fascia

INSPECTION WAS RESTRICTED

I did not inspect all of the eaves, soffit, and fascia. It's impossible to inspect those areas closely during a home inspection. A home inspection is not an exhaustive evaluation. My inspection of the exterior was limited. I did not reach and access closely every part of the eaves, soffit, and fascia.

Wall-Covering, Flashing & Trim

INSPECTION WAS RESTRICTED

I did not inspect all of the exterior wall-covering material. A home inspection is not an exhaustive evaluation. My inspection of the exterior was limited. I did not reach and access closely every part of the exterior wall-covering.

GFCIs & Electrical

UNABLE TO INSPECT EVERYTHING

I was unable to inspect every electrical component or proper installation of the GFCI system according to modern code. A licensed electrician or township building code inspector could perform that type of test, which is beyond the scope of my visual-only home inspection. I inspected the electrical system as much as I could according to the Home Inspection Standards of Practice.

Windows

INSPECTION RESTRICTED

I did not inspect all windows. I did inspect a representative number of them. It's impossible to inspect every window component closely during a home inspection. A home inspection is not an exhaustive evaluation. I did not reach and access closely every window, particularly those above the first floor level.

Recommendations

4.3.1 Wall-Covering, Flashing & Trim

DAMAGED WALL-COVERING MATERIAL

BACK SIDE OF THE HOUSE. NEAR THE GRILL.

I observed indications of a defect at the exterior wall-covering material. Damaged siding near the grill area at the deck.

Correction and further evaluation is recommended.

Recommendation

Contact a qualified professional.

Major Defect

4.12.1 Exhaust Hoods

CLOGGED DRYER EXHAUST HOOD

THE ROOF.

I observed an exhaust hood that seemed to be connected to the clothes dryer, and it was clogged. Fire hazard.

Recommendation

Contact a qualified appliance repair professional.

 Major Defect

5: BASEMENT, FOUNDATION, CRAWLSPACE & STRUCTURE

Information

Basement: Type of Basement	Insulation in	Ventilation in
Foundation Described	Foundation/Basement Area: Type	Foundation/Basement Area:
Concrete	of Insulation Observed	Insulation Type
	Batt, Fiberglass	Batt, Fiberglass

Basement: Homeowner's Responsibility

One of the most common problems in a house is a wet basement or foundation. You should monitor the walls and floors for signs of water penetration, such as dampness, water stains, peeling paint, efflorescence, and rust on exposed metal parts. In a finished basement, look for rotted or warped wood paneling and doors, loose floor tiles, and mildew stains. It may come through the walls or cracks in the floor, or from backed-up floor drains, leaky plumbing lines, or a clogged air-conditioner condensate line.

Basement: Basement Was Inspected

The basement was inspected according to the [Home Inspection Standards of Practice](#).
The basement can be a revealing area in the house and often provides a general picture of how the entire structure works. In most basements, the structure is exposed overhead, as are the HVAC distribution system, plumbing supply and DWV lines, and the electrical branch-circuit wiring. I inspected those systems and components.

Basement: Foundation Was Inspected

The foundation was inspected according to the [Home Inspection Standards of Practice](#).

Basement: Structural Components Were Inspected

Structural components were inspected according to the [Home Inspection Standards of Practice](#), including readily observed floor joists.

Insulation in Foundation/Basement Area: Insulation Was Inspected

During the home inspection, I inspected for insulation in unfinished spaces, including attics, crawlspaces and foundation areas. I inspected for ventilation of unfinished spaces, including attics, crawlspaces and foundation areas. And I inspected mechanical exhaust systems in the kitchen, bathrooms and laundry area.

I attempted to describe the type of insulation observed and the approximate average depth of insulation observed at the unfinished attic floor area or roof structure.

I reported as in need of correction the general absence of insulation or ventilation in unfinished spaces.

Insulation in Foundation/Basement Area: Approximate Average Depth of Insulation

Attic

3-6 inches

Determining how much insulation should be installed in a house depends upon where a home is located. proper amount of insulation should be installed at a particular area of a house is dependent upon which climate zone the house is located.

This house is located in a climate zone that requires an R-value of

Ventilation in Foundation/Basement Area: Ventilation Inspected

During the home inspection, I inspected for insulation in unfinished spaces, including attics, crawlspaces and foundation areas. And I inspected mechanical exhaust systems in the kitchen, bathrooms and laundry area.

I report as in need of correction the general absence of ventilation in unfinished spaces.

Ventilation in Foundation/Basement Area: Attic Insulation Thickness

Attic

3-6 inches

Determining how much insulation should be installed in a house depends upon where a home is located. proper amount of insulation should be installed at a particular area of a house is dependent upon which climate zone the house is located.

This house is located in a climate zone that requires an R-value of

Sump Pump: Sump Pump Installed

I observed a sump pump was installed in the house.

Neglecting to test a sump pump routinely, especially if it is rarely used, can lead to severe water damage when a heavy storm, snow melt, or flooding sends water against the home.

Overload of the sump pump due to poor drainage elsewhere on the property can lead to pump failure. Frequent sump operation can be a sign of excessive water buildup under the basement floor due to poorly sloped landscaping, poor rain runoff, gutter back-flows, and other problems.

Lack of a back-up sump pump, which can be quickly installed in the event the first pump fails, can lead to serious water damage and property loss. This is especially important if the sump pump is relied upon to maintain a dry basement, or if the house is located in an area of seasonally high groundwater. Sump failure can cause extensive water damage and the loss of valuable personal belongings.

Sump Pump: Sump Pump Activated

I activated the sump pump. It turned on.

The sump pump should not recycle. When a sump pump is used to keep a buildings interior dry, the discharge should drain away from the building and should not add to the subsurface water condition that the sump pump is meant to control.

Sump Pump: Water in Sump Pump

I observed standing water in the sump pump bucket. This may indicate that the sump pump is critical and necessary to keep the house basement or foundation from having water intrusion problems developing.

Limitations

Basement

PERSONAL STORAGE RESTRICTION

Personal items limited my visual inspection. Moving personal items and storage is not required by the Standards of Practice. I could not see everything. Many things were blocking my inspection.

Basement

BASEMENT FINISHED

The basement was finished. This was an inspection restriction, because the finished floor, walls, and ceiling blocked my visual inspection of the basement, its systems and components.

6: HEATING

Information

Heating System Information: Energy Source

Gas

Heating System Information: Heating Method

Warm-Air Heating System

Thermostat and Normal Operating Controls: Thermostat Location

Dining room

Heating System Information: Homeowner's Responsibility

Basement

Most HVAC (heating, ventilating and air-conditioning) systems in houses are relatively simple in design and operation. They consist of four components: controls, fuel supply, heating or cooling unit, and distribution system. The adequacy of heating and cooling is often quite subjective and depends upon occupant perceptions that are affected by the distribution of air, the location of return-air vents, air velocity, the sound of the system in operation, and similar characteristics.

It's your job to get the HVAC system inspected and serviced every year. And if you're system as an air filter, be sure to keep that filter cleaned.

Thermostat and Normal Operating Controls: Emergency Shut-Off Switch Inspected

I observed an emergency shut-off switch. I inspected it. It worked when I used it during my inspection.

Thermostat and Normal Operating Controls: Service Switch Inspected

I observed a service switch. I inspected it. It worked when I used it during my inspection.

7: COOLING

Information

Cooling System Information:
Service Disconnect Inspected

I observed a service disconnect within sight of the cooling system.

**Thermostat and Normal**
Operating Controls: Thermostat**Location**

Dining room

Cooling System Information: Homeowner's Responsibility

Most air-conditioning systems in houses are relatively simple in design and operation. The adequacy of the cooling is often quite subjective and depends upon occupant perceptions that are affected by the distribution of air, the location of return-air vents, air velocity, the sound of the system in operation, and similar characteristics.

It's your job to get the air conditioning system inspected and serviced every year. And if you're system as an air filter, be sure to keep that filter cleaned.

Thermostat and Normal Operating Controls: Emergency Shut-Off Switch Inspected

I observed an emergency shut-off switch. I inspected it. It worked when I used it during my inspection.

Thermostat and Normal Operating Controls: Service Switch Inspected

I observed a service switch. I inspected it. It worked when I used it during my inspection.

Condensate: Condensate Discharge Confirmed

I observed a discharge pipe apparently connected to the condensate pump installed at the cooling system.

**Condensate: Condensate Pump**

I observed a condensate pump installed at the cooling system. This component collects condensate water that is created when the cooling system is operating. The condensate pump should collect and discharge the water properly.

8: PLUMBING

Information

Main Water Shut-Off Valve:
Location of Main Shut-Off Valve
Basement

Hot Water Source: Inspected TPR Valve
I inspected the temperature and pressure relief valve.

Hot Water Source: Inspected Venting Connections
I inspected the venting connections.

Hot Water Source: Inspected Seismic Bracing
I inspected the seismic bracing for the hot water tank.

Main Water Shut-Off Valve: Homeowner's Responsibility

It's your job to know where the main water and fuel shutoff valves are located. And be sure to keep an eye out for any water and plumbing leaks.

Water Supply : Water Supply Is Public

The water supply to the house appeared to be from the public water supply source based upon the observed indications at the time of the inspection. To confirm and be certain, I recommend asking the homeowner for details.

Hot Water Source: Type of Hot Water Source

Gas-Fired Hot Water Tank

I inspected for the main source of the distributed hot water to the plumbing fixtures (sinks, tubs, showers). I recommend asking the homeowner for details about the hot water equipment and past performance.

Hot Water Source: Inspected Hot Water Source

I inspected the hot water source and equipment according to the [Home Inspection Standards of Practice](#).

Drain, Waste, & Vent Systems: Inspected Drain, Waste, Vent Pipes

I attempted to inspect the drain, waste, and vent pipes. Not all of the pipes and components were accessible and observed. Inspection restriction. Ask the homeowner about water and sewer leaks or blockages in the past.

Water Supply & Distribution Systems: Inspected Water Supply & Distribution Pipes

I attempted to inspect the water supply and distribution pipes (plumbing pipes). Not all of the pipes and components were accessible and observed. Inspection restriction. Ask the homeowner about water supply, problems with water supply, and water leaks in the past.

Limitations

Hot Water Source

INSPECTION RESTRICTION

The inspection of the system was restricted. I was unable to completely inspect the system.

Drain, Waste, & Vent Systems

NOT ALL PIPES WERE INSPECTED

The inspection was restricted because not all of the pipes were exposed, readily accessible, and observed. For example, most of the drainage pipes were hidden within the walls.

Water Supply & Distribution Systems

NOT ALL PIPES WERE INSPECTED

The inspection was restricted because not all of the water supply pipes were exposed, readily accessible, and observed. For example, most of the water distribution pipes, valves and connections were hidden within the walls.

9: ELECTRICAL

Information

Service-Entrance Conductors:
Inspected Service-Entrance
Conductors

I inspected the electrical service-
entrance conductors.

Main Service Disconnect:
Inspected Main Service
Disconnect

Garage

I inspected the electrical main
service disconnect.

Electrical Wiring: Type of Wiring,
If Visible

NM-B (Romex)

Electric Meter & Base: Inspected the Electric Meter & Base

I inspected the electrical electric meter and base.

Main Service Disconnect: Homeowner's Responsibility

Garage

It's your job to know where the main electrical panel is located, including the main service disconnect that turns everything off.

Be sure to test your GFCIs, AFCIs, and smoke detectors regularly. You can replace light bulbs, but more than that, you ought to hire an electrician. Electrical work is hazardous and mistakes can be fatal. Hire a professional whenever there's an electrical problem in your house.

Main Service Disconnect: Main Disconnect Rating, If Labeled

200

I observed indications of the main service disconnect's amperage rating. It was labeled.

Panelboards & Breakers: Inspected Main Panelboard & Breakers

Garage

I inspected the electrical panelboards and over-current protection devices (circuit breakers and fuses).

Panelboards & Breakers: Inspected Subpanel & Breakers

I inspected the electrical subpanel and over-current protection devices (circuit breakers and fuses).

Service Grounding & Bonding: Inspected the Service Grounding & Bonding

I inspected the electrical service grounding and bonding.

AFCIs: Inspected AFCIs

I inspected receptacles observed that were deemed to be arc-fault circuit interrupter (AFCI)-protected using the AFCI test button, where possible.

GFCIs: Inspected GFCIs

I inspected ground-fault circuit interrupter receptacles and circuit breakers observed and deemed to be GFCIs using a GFCI tester, where possible.

Limitations

Electrical Wiring

UNABLE TO INSPECT ALL OF THE WIRING

I was unable to inspect all of the electrical wiring. Obviously, most of the wiring is hidden from view within walls. Beyond the scope of a visual home inspection.

Service Grounding & Bonding

UNABLE TO CONFIRM PROPER GROUNDING AND BONDING

I was unable to confirm proper installation of the system grounding and bonding according to modern code. A licensed electrician or township building code inspector could perform that type of test, which is beyond the scope of my visual-only home inspection. I inspected the grounding and bonding as much as I could according to the Home Inspection Standards of Practice.

AFCIs

UNABLE TO INSPECT EVERYTHING

I was unable to inspect every electrical component or proper installation of the AFCI system according to modern code. A licensed electrician or township building code inspector could perform that type of test, which is beyond the scope of my visual-only home inspection. I inspected the electrical system as much as I could according to the Home Inspection Standards of Practice.

GFCIs

UNABLE TO INSPECT EVERYTHING

I was unable to inspect every electrical component or proper installation of the GFCI system according to modern code. A licensed electrician or township building code inspector could perform that type of test, which is beyond the scope of my visual-only home inspection. I inspected the electrical system as much as I could according to the Home Inspection Standards of Practice.

10: ATTIC, INSULATION & VENTILATION

Information

Insulation in Attic: Type of Insulation Observed

Cellulose

Structural Components & Observations in Attic: Structural Components Were Inspected

Structural components were inspected from the attic space according to the [Home Inspection Standards of Practice](#).

Insulation in Attic: Insulation Was Inspected

During the home inspection, I inspected for insulation in unfinished spaces, including attics, crawlspaces and foundation areas. I inspected for ventilation of unfinished spaces, including attics, crawlspaces and foundation areas. And I inspected mechanical exhaust systems in the kitchen, bathrooms and laundry area.

I attempted to describe the type of insulation observed and the approximate average depth of insulation observed at the unfinished attic floor area or roof structure.

I reported as in need of correction the general absence of insulation or ventilation in unfinished spaces.

Insulation in Attic: Approximate Average Depth of Insulation

Attic

9-12 inches

Determining how much insulation should be installed in a house depends upon where a home is located. The amount of insulation that should be installed at a particular area of a house is dependent upon which climate zone the house is located and the local building codes.

Ventilation in Attic: Ventilation Inspected

During the home inspection, I inspected for ventilation in unfinished spaces, including attics, crawlspaces and foundation areas. And I inspected for mechanical exhaust systems.

I report as in need of correction the general absence of ventilation in unfinished spaces.

Limitations

Structural Components & Observations in Attic

COULD NOT SEE EVERYTHING IN ATTIC

I could not see and inspect everything in the attic space. The access is restricted and my inspection is limited.

11: BATHROOMS

Information

Heat Source in Bathroom: Heat Source in Bathroom Was Inspected

I inspected the heat source in the bathroom (register/baseboard).

Bathroom Toilets: Toilets Inspected

I flushed all of the toilets.

Sinks, Tubs & Showers: Ran Water at Sinks, Tubs & Showers

I ran water at all bathroom sinks, bathtubs, and showers. I inspected for deficiencies in the water supply by viewing the functional flow in two fixtures operated simultaneously.

Bathroom Exhaust Fan / Window: Inspected Bath Exhaust Fans

I inspected the exhaust fans of the bathroom(s). All mechanical exhaust fans should terminate outside. Confirming that the fan exhausts outside is beyond the scope of a home inspection.

GFCI & Electric in Bathroom: GFCI-Protection Tested

I inspected the GFCI-protection at the receptacle near the bathroom sink by pushing the test button at the GFCI device or using a GFCI testing instrument.

All receptacles in the bathroom must be GFCI protected.

12: DOORS, WINDOWS & INTERIOR

Information

Doors: Doors Inspected

I inspected a representative number of doors according to the [Home Inspection Standards of Practice](#) by opening and closing them. I did not operate door locks and door stops, which is beyond the scope of a home inspection.

Windows: Windows Inspected

I inspected a representative number of windows according to the [Home Inspection Standards of Practice](#) by opening and closing them. I did not operate window locks and operation features, which is beyond the scope of a home inspection.

Switches, Fixtures & Receptacles: Inspected a Switches, Fixtures & Receptacles

I inspected a representative number of switches, lighting fixtures and receptacles.

Floors, Walls, Ceilings: Floors, Walls, Ceilings Inspected

I inspected the readily visible surfaces of floors, walls and ceilings. I looked for material defects according to the [Home Inspection Standards of Practice](#).

Stairs, Steps, Stoops, Stairways & Ramps: Stairs, Steps, Stoops, Stairways & Ramps Were Inspected

I inspected the stairs, steps, stoops, stairways and ramps that were within the scope of my home inspection.

All treads should be level and secure. Riser heights and tread depths should be as uniform as possible. As a guide, stairs must have a maximum riser of 7-3/4 inches and a minimum tread of 10 inches.

Railings, Guards & Handrails: Railings, Guards & Handrails Were Inspected

I inspected a representative number railings, guards and handrails that were within the scope of the home inspection.

Presence of Smoke and CO Detectors: Inspected for Presence of Smoke and CO Detectors

I inspected for the presence of smoke and carbon-monoxide detectors.

There should be a smoke detector in every sleeping room, outside of every sleeping room, and one every level of a house.

Limitations

Switches, Fixtures & Receptacles

UNABLE TO INSPECT EVERYTHING

I was unable to inspect every electrical component or proper installation of the system according to modern code. A licensed electrician or township building code inspector could perform that type of test, which is beyond the scope of my visual-only home inspection. I inspected the electrical system as much as I could according to the Home Inspection Standards of Practice.

Presence of Smoke and CO Detectors

UNABLE TO TEST EVERY DETECTOR

I was unable to test every detector. We recommend testing all of the detectors. Ask the seller about the performance of the detectors and of any issues regarding them. We recommend replacing all of the detectors (smoke and carbon monoxide) with new ones just for peace of mind and for safety concerns.

13: LAUNDRY

Limitations

Clothes Washer

DID NOT INSPECT

LAUNDRY

I did not inspect the clothes washer and dryer fully. These appliances are beyond the scope of a home inspection. I did not operate the appliances. The clothes dryer exhaust pipe must be inspected and cleaned every year to help prevent house fires.

Clothes Dryer

DID NOT INSPECT

LAUNDRY

I did not inspect the clothes washer and dryer fully. These appliances are beyond the scope of a home inspection. I did not operate the appliances. The clothes dryer exhaust pipe must be inspected and cleaned every year to help prevent house fires.

Recommendations

13.3.1 Laundry Room, Electric, and Tub

MISSING CATCH PAN UNDER WASHER

LAUNDRY

Minor Defect

I observed that the clothes washer did not have a water leak catch pan. It is recommended.

Recommendation

Recommended DIY Project

14: ATTACHED GARAGE

Information

Garage Vehicle Door: Type of Door Operation Opener	Garage Vehicle Door Opener: Garage Door Panels Were Inspected I inspected the garage door panels.	Garage Vehicle Door Opener: Wall Control Button Label Was Inspected I observed a warning label near the wall control button. Good.
--	---	--

Garage Floor: Garage Floor Inspected

I inspected the floor of the attached garage.

Garage Vehicle Door Opener: Manual Release

I checked for a manual release handle--a means of manually detaching the door from the door opener.

The handle should be colored red so that it can be seen easily. The handle should be easily accessible and no more than 6 feet above the garage floor. The handle should not be in contact with the top of a vehicles.

Garage Vehicle Door Opener: Spring Warning Label Was Inspected

I observed a spring warning label attached to the spring assembly or the back of the door panel. Good.

Garage Vehicle Door Opener: General Warning Label Was Inspected

I observed a general warning label attached to the back of the door panel. Good.

Garage Vehicle Door Opener: Bottom Bracket Label Was Inspected

I observed two warning labels attached to the door in the vicinity of the bottom corner brackets. Some newer doors have tamper-resistant bottom corner brackets that do not require these warning labels.

Garage Vehicle Door Opener: Springs, Bracket & Hardware Were Inspected

I closed the door and checked the springs for damage. If a spring was broken, operating the door can cause serious injury or death. I would not operate the door if there was damage.

I visually checked the doors hinges, brackets and fasteners. If the door had an opener, the door must have an opener-reinforcement bracket that is securely attached to the doors top section. The header bracket of the opener rail must be securely attached to the wall or header using lag bolts or concrete anchors.

Garage Vehicle Door Opener: Door Was Manually Opened and Closed

I closed the door. If the door had an opener, I pulled the manual release to disconnect the door from the opener. I lifted and operated the door. If the door was hard to lift, then it is out of balance. This is an unsafe condition.

I raised the door to the fully-open position, then closed the door. The door should move freely, and it should open and close without difficulty. As the door operates, I make sure that the rollers stay in the track. The door should stay in the fully open position. The door should also stay in a partially opened position about three to four above the garage floor level.

I reconnected the door to the opener, if present.

I checked the door handles or gripping points.

Garage Vehicle Door Opener: Spring Containment Was Inspected

If the door has extension springs, I inspect for spring containment. Extension springs should be contained by a cable that runs through the center of the springs. If a spring breaks, containment helps to prevent broken parts from flying around dangerously in the garage.

Garage Vehicle Door Opener: Wall Push Button Was Inspected

I inspected the wall button. The wall button should be at least 5 feet above the standing surface, and high enough to be out of reach of small children. I pressed the push button to see if it successfully operated the door.

Garage Vehicle Door Opener: Non-Contact Reversal Was Inspected

I observed the auto-reverse feature during a non-contact test.

Standing inside the garage but safely away from the path of the door, I used the remote control or wall button to close the door. As the door was closing, I waved an object in the path of the photoelectric eye beam. The door should automatically reverse.

Garage Vehicle Door Opener: Photo-Electric Eyes Were Inspected

I inspected the photo-electric eyes.

Federal law states that residential garage door openers manufactured after 1992 must be equipped with photo-electric eyes or some other safety-reverse feature that meets UL 325 standards.

I checked to see if photo-electric eyes are installed. The vertical distance between the photo-eye beam and the floor should be no more than 6 inches.

Ceiling, Walls & Firewalls in Garage: Garage Ceiling & Walls Were Inspected

I inspected the ceiling and walls of the garage according to the Home Inspection Standards of Practice.

Ceiling, Walls & Firewalls in Garage: Door Between Garage and House Was Inspected

I inspected the door between the attached garage and the house.

The door should be a solid wood door at least 1-3/8 inches thick, a solid or honeycomb-core steel door at least 1-3/8 inches thick, or a 20-minute fire-rated door.

The door should be equipped with a self-closing or an automatic-closing device.

15: KITCHEN

Information

Kitchen Sink: Ran Water at Kitchen Sink

I ran water at the kitchen sink.

GFCI: GFCI Tested

Kitchen

I observed ground fault circuit interrupter (GFCI) protection in the kitchen.

**Countertops & Cabinets: Inspected Cabinets & Countertops**

I inspected a representative number of cabinets and countertop surfaces.

Floors, Walls, Ceilings: Floors, Walls, Ceilings Inspected

I inspected the readily visible surfaces of floors, walls and ceilings. I looked for material defects according to the [Home Inspection Standards of Practice](#).

STANDARDS OF PRACTICE

Inspection Detail

Please refer to the [Home Inspection Standards of Practice](#) while reading this inspection report. I performed the home inspection according to the standards and my clients wishes and expectations. Please refer to the inspection contract or agreement between the inspector and the inspector's client.

Roof

Please refer to the [Home Inspection Standards of Practice](#) related to inspecting the roof of the house.

Monitor the roof covering because any roof can leak. To monitor a roof that is inaccessible or that cannot be walked on safely, use binoculars. Look for deteriorating or loosening of flashing, signs of damage to the roof covering and debris that can clog valleys and gutters.

Roofs are designed to be water-resistant. Roofs are not designed to be waterproof. Eventually, the roof system will leak. No one can predict when, where or how a roof will leak.

I. The inspector shall inspect from ground level or the eaves:

1. the roof-covering materials;
2. the gutters;
3. the downspouts;
4. the vents, flashing, skylights, chimney, and other roof penetrations; and
5. the general structure of the roof from the readily accessible panels, doors or stairs.

II. The inspector shall describe:

1. the type of roof-covering materials.

III. The inspector shall report as in need of correction:

1. observed indications of active roof leaks.

Chimney, Fireplace, or Stove

I. The inspector shall inspect:

1. readily accessible and visible portions of the fireplaces and chimneys;
2. lintels above the fireplace openings;
3. damper doors by opening and closing them, if readily accessible and manually operable; and
4. cleanout doors and frames.

II. The inspector shall describe:

1. the type of fireplace.

III. The inspector shall report as in need of correction:

1. evidence of joint separation, damage or deterioration of the hearth, hearth extension or chambers;
2. manually operated dampers that did not open and close;
3. the lack of a smoke detector in the same room as the fireplace;
4. the lack of a carbon-monoxide detector in the same room as the fireplace; and
5. cleanouts not made of metal, pre-cast cement, or other non-combustible material.

Exterior

Please refer to the [Home Inspection Standards of Practice](#) related to inspecting the exterior of the house.

I. The inspector shall inspect:

1. the exterior wall-covering materials;
2. the eaves, soffits and fascia;
3. a representative number of windows;
4. all exterior doors;
5. flashing and trim;
6. adjacent walkways and driveways;
7. stairs, steps, stoops, stairways and ramps;
8. porches, patios, decks, balconies and carports;
9. railings, guards and handrails; and
10. vegetation, surface drainage, retaining walls and grading of the property, where they may adversely affect the structure due to moisture intrusion.

II. The inspector shall describe:

1. the type of exterior wall-covering materials.

III. The inspector shall report as in need of correction:

1. any improper spacing between intermediate balusters, spindles and rails.

Basement, Foundation, Crawlspce & Structure**I. The inspector shall inspect:**

the foundation;
the basement;
the crawlspce; and
structural components.

II. The inspector shall describe:

the type of foundation; and
the location of the access to the under-floor space.

III. The inspector shall report as in need of correction:

observed indications of wood in contact with or near soil;
observed indications of active water penetration;
observed indications of possible foundation movement, such as sheetrock cracks, brick cracks, out-of-square door frames, and unlevel floors; and
any observed cutting, notching and boring of framing members that may, in the inspector's opinion, present a structural or safety concern.

Heating**I. The inspector shall inspect:**

1. the heating system, using normal operating controls.

II. The inspector shall describe:

1. the location of the thermostat for the heating system;
2. the energy source; and
3. the heating method.

III. The inspector shall report as in need of correction:

1. any heating system that did not operate; and
2. if the heating system was deemed inaccessible.

Cooling**I. The inspector shall inspect:**

1. the cooling system, using normal operating controls.

II. The inspector shall describe:

1. the location of the thermostat for the cooling system; and
2. the cooling method.

III. The inspector shall report as in need of correction:

1. any cooling system that did not operate; and
2. if the cooling system was deemed inaccessible.

Plumbing**I. The inspector shall inspect:**

1. the main water supply shut-off valve;
2. the main fuel supply shut-off valve;
3. the water heating equipment, including the energy source, venting connections, temperature/pressure-relief (TPR) valves, Watts 210 valves, and seismic bracing;
4. interior water supply, including all fixtures and faucets, by running the water;
5. all toilets for proper operation by flushing;
6. all sinks, tubs and showers for functional drainage;
7. the drain, waste and vent system; and
8. drainage sump pumps with accessible floats.

II. The inspector shall describe:

1. whether the water supply is public or private based upon observed evidence;
2. the location of the main water supply shut-off valve;
3. the location of the main fuel supply shut-off valve;
4. the location of any observed fuel-storage system; and
5. the capacity of the water heating equipment, if labeled.

III. The inspector shall report as in need of correction:

1. deficiencies in the water supply by viewing the functional flow in two fixtures operated simultaneously;
2. deficiencies in the installation of hot and cold water faucets;
3. active plumbing water leaks that were observed during the inspection; and
4. toilets that were damaged, had loose connections to the floor, were leaking, or had tank components that did not operate.

Electrical**I. The inspector shall inspect:**

1. the service drop;
2. the overhead service conductors and attachment point;
3. the service head, gooseneck and drip loops;
4. the service mast, service conduit and raceway;
5. the electric meter and base;
6. service-entrance conductors;
7. the main service disconnect;
8. panelboards and over-current protection devices (circuit breakers and fuses);
9. service grounding and bonding;
10. a representative number of switches, lighting fixtures and receptacles, including receptacles observed and deemed to be arc-fault circuit interrupter (AFCI)-protected using the AFCI test button, where possible;
11. all ground-fault circuit interrupter receptacles and circuit breakers observed and deemed to be GFCIs using a GFCI tester, where possible; and

12. for the presence of smoke and carbon-monoxide detectors.

II. The inspector shall describe:

1. the main service disconnect's amperage rating, if labeled; and
2. the type of wiring observed.

III. The inspector shall report as in need of correction:

1. deficiencies in the integrity of the service-entrance conductors insulation, drip loop, and vertical clearances from grade and roofs;
2. any unused circuit-breaker panel opening that was not filled;
3. the presence of solid conductor aluminum branch-circuit wiring, if readily visible;
4. any tested receptacle in which power was not present, polarity was incorrect, the cover was not in place, the GFCI devices were not properly installed or did not operate properly, evidence of arcing or excessive heat, and where the receptacle was not grounded or was not secured to the wall; and
5. the absence of smoke and/or carbon monoxide detectors.

Attic, Insulation & Ventilation

The inspector shall inspect:

insulation in unfinished spaces, including attics, crawlspaces and foundation areas;
ventilation of unfinished spaces, including attics, crawlspaces and foundation areas; and
mechanical exhaust systems in the kitchen, bathrooms and laundry area.

The inspector shall describe:

the type of insulation observed; and
the approximate average depth of insulation observed at the unfinished attic floor area or roof structure.

The inspector shall report as in need of correction:

the general absence of insulation or ventilation in unfinished spaces.

Bathrooms

The home inspector will inspect:

interior water supply, including all fixtures and faucets, by running the water;
all toilets for proper operation by flushing; and
all sinks, tubs and showers for functional drainage.

Doors, Windows & Interior

The inspector shall inspect:

a representative number of doors and windows by opening and closing them;
floors, walls and ceilings; stairs, steps, landings, stairways and ramps;
railings, guards and handrails; and
garage vehicle doors and the operation of garage vehicle door openers, using normal operating controls.

The inspector shall describe:

a garage vehicle door as manually-operated or installed with a garage door opener.

The inspector shall report as in need of correction:

improper spacing between intermediate balusters, spindles and rails for steps, stairways, guards and railings;
photo-electric safety sensors that did not operate properly; and
any window that was obviously fogged or displayed other evidence of broken seals.

Laundry**The inspector shall inspect:**

mechanical exhaust systems in the kitchen, bathrooms and laundry area.

Attached Garage**The inspector shall inspect:**

garage vehicle doors and the operation of garage vehicle door openers, using normal operating controls.

The inspector shall describe:

a garage vehicle door as manually-operated or installed with a garage door opener.

Kitchen

The kitchen appliances are not included in the scope of a home inspection according to the Standards of Practice.

The inspector will out of courtesy only check:

the stove,
oven,
microwave, and
garbage disposer.
