

Please add a function to search variables.

In the variable search result, allow users to check the "Module" and "Action" information. And, also add a function to jump to the searched place (Module, Action).

Idea:

Module	#	Action	Variable	Default Value
Recording1	3	SetValue	DATA1	1
Recording1	5	SetValue	DATA1	1
Recording2	3	Key Sequence	DATA1	1
Recording2	7	SetValue	DATA2	2

Double-clicking in a search result jumps to the corresponding place.
