

Alternative workflow for sending articles digitally for Resource sharing

We find the digitization workflow for Resource sharing tedious, and would like to have a shortcut directly from action menu, like for item and non-returnable.

This would be a new action from the Lending request: **Ship digitally**

When choosing **Ship digitally** you should get the option to add a file, and ship it digitally to Borrowing library. This means you skip the Alma digitization steps, which is unnecessary for small libraries.

In the BIBSYS consortium, all libraries are configured as Resource Sharing libraries, and support digitization.
