

Restore the old colorful icons

Recently all my Office command icons changed style. For example, in Excel, I have both the Save and Save As icons on my Quick Access Toolbar. The old icons were both colorful; only the new Save icon has fill. Throughout the ribbons and QAT, more of the old icons have colorful fills, whereas the new icons are mostly lines without any fills, and those that have fills are monochromatic. The multiple colors and fills make it much easier to spot which command I'm looking for on my customized QATs, which are filled to capacity. My work computer still has the easier icons so I know it's confined to my own laptop. I chatted with support, and she concluded that the new icons are the result of an upgrade, which my work computer apparently does not have yet.

We should have the option to get the easier icons back.
