

Menu Indicator on Mobile View

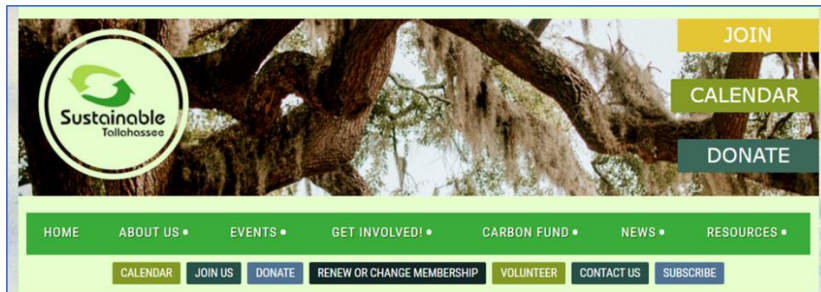

Our website viewed on a mobile device has three bars that intend to indicate a menu. However, we often get feedback that many do not know this and they can't find resources, news, events, about us, etc. on our site.

We have 7 buttons in our main menu. We also have 7 buttons in our secondary menu. Only the secondary menu buttons appear on mobile devices. The main menu is not shown and is replaced by three bars.

With more and more people using mobile devices for website access, it is important to have our full menu clearly accessible.

Our request: Include buttons for all main and secondary menus on mobile devices.
