COURSE DESIGN

Marathon loop is conducted on a boardwalk made of six prefabricated concrete slabs 7ft x 30 ft separated by expansion joints, with two rectangular slabs on the north side for bicycles and four curvy slabs on the south for pedestrians. Over most of the course the curvy slabs on the beach side have permanent benches, leaving three slabs for pedestrians. Cones are to be placed to the south of the expansion joint delineating the bicycle path from pedestrian walkway. At intermittent locations, i.e., at 1stAid/lifeguard stations and concession/restroom areas, the boardwalk has a uniform slab construction different from the bike and pedestrian surfaces. Athletes may take the shortest route available (SRA) while keeping the dividing cones to their left at all times.
