Always follow your healthcare providers recommendations.

Are you feeling sick or experiencing symptoms of Covid-19

NO

Yes

- Get tested

EITHER

POSITIVE

- What are your test results?
  - NO
  - Get tested
  - NO
  - Complete Mandatory 10 Day Isolation beginning on onset of symptoms
  - Yes
  - Complete Mandatory 10 Day Quarantine counting from day of exposure (see exception below)

NEGATIVE

- What are your test results?
  - NO
  - Complete Mandatory 7 Day Quarantine counting from day of exposure (see exception below)
  - NO
  - Get tested
  - POSITIVE
  - What are your test results?
  - NO
  - Complete Mandatory 14 Day Quarantine counting from day of exposure (see exception below)
  - NO
  - Get tested
  - NO
  - Return to work

Exception to positive exposure:
Anyone who has had Covid in the past three months and has recovered and remains without symptoms

The CDC defines close contact as Someone who was within 6 feet of an infected person for a cumulative total of 15 minutes or more over a 24-hour period* starting from 2 days before illness onset (or, for asymptomatic patients, 2 days prior to test specimen collection) until the time the patient is isolated.

* Individual exposures added together over a 24-hour period (e.g., three 5-minute exposures for a total of 15 minutes). Data are limited, making it difficult to precisely define “close contact;” however, 15 cumulative minutes of exposure at a distance of 6 feet or less can be used as an operational definition for contact investigation. Factors to consider when defining close contact include proximity (closer distance likely increases exposure risk), the duration of exposure (longer exposure time likely increases exposure risk), whether the infected individual has symptoms (the period around onset of symptoms is associated with the highest levels of viral shedding), if the infected person was likely to generate respiratory aerosols (e.g., was coughing, singing, shouting), and other environmental factors (crowding, adequacy of ventilation, whether exposure was indoors or outdoors). Because the general public has not received training on proper selection and use of respiratory PPE, such as an N95, the determination of close contact should generally be made irrespective of whether the contact was wearing respiratory PPE. At this time, differential determination of close contact for those using fabric face coverings is not recommended.
