Texas Alzheimer's Research & Care Consortium

What's the purpose of this study?
The purpose of the study is to test the usability of a smart watch and smartphone app. The system being tested will enable caregivers to monitor the location of the smartwatch, set safe zones, and initiate two-way talk. The goal is to help family members respond to needs of loved ones who are at risk of getting lost.

Who can be in this study?
Caregivers who are caring for loved ones with dementia or mild cognitive impairment who live in the community

Caregivers must:
- Provide at least 20 hours or more care per week without pay
- Use a smartphone
- Speak and read English
- Are concerned about their loved-one wandering

What will we do in this study?
- Schedule and attend a one-hour study visit
- If eligible, you will receive instructions on how to use the TheoraCare system (watch and app) for 3 months
- Complete two surveys and intermittent phone interviews
- Upon completion, you will receive compensation for your time
