

Want to help your students understand epidemics?

A project by NSF and UPenn

www.whyville.net

Calling All Science Teachers (Grades 5-11)

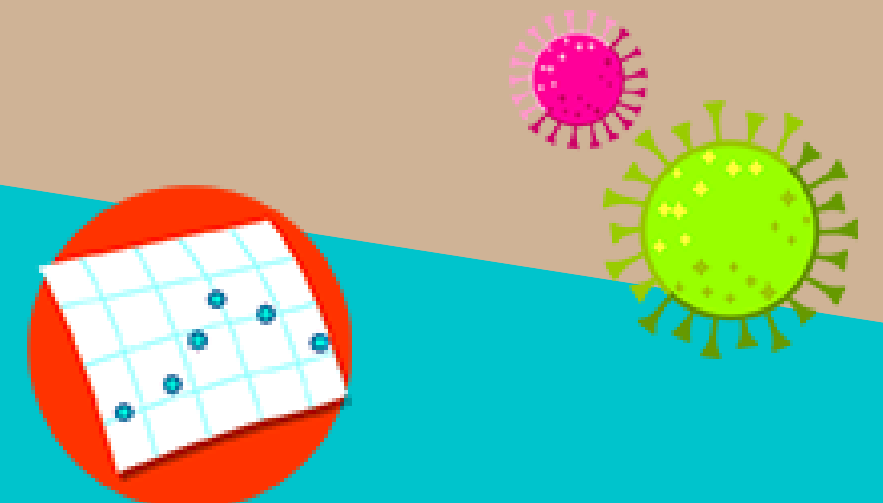

We're using a virtual experience to motivate exploration of the science behind epidemics as well as learn ways to prevent infection.

FREE Lesson Plans on Virtual Epidemics

We are looking for both **elementary and secondary school** science teachers and their students (Grades 5-11) to use a **two-week unit on epidemics in Fall 2020**.

We are providing **free adaptable class activities** to be used in classrooms virtually and/or physically.

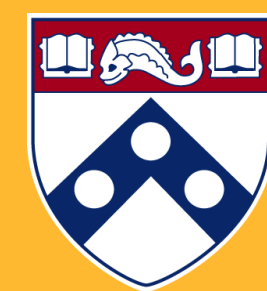

We also provide **free access to Whyville.net**, an ad-free, online virtual world in which students can experience and investigate a virtual epidemic.
