## How to backup google photos on android

Unfortunately, unlimited storage in Google Photos is about to end in June 2021, with all photos uploaded after that counting towards your free 15GB Google Drive storage. This means that at best you have a few years left from free storage before you have to start paying for more space. For those who want to jump ship early, the good news is that there are already several Google Photos alternatives on the market. The bad news is that none of them offer the same set of features, and some require a lot more effort. Here's a look at your best options! Best Google Photos AlternativesAmazon PhotosDropboxFlickrApple iCloudOneDriveOS custom serverHow should you stop using Google Photos? Before we get to the Google Photos alternative, it's worth asking the question: are you simply better off paying for more storage in Google Photos? The answer is probably yes. Free unlimited storage was just part of what made Google Photos the best choice around. The ability to quickly search your photo library by date, location, or keyword is incredibly useful, and no other service can match it. More information: All you need to know about Google OneO another thing to consider is that none of these alternatives will be free forever. Most have even less free capacity than Google Drive, and some also require hardware or software subscription fees. In most cases, you're only better off biting a bullet and paying \$2 a month (or \$20 a year) for 100GB once you've reached the limit. It should also be noted that pixel owners retain unlimited Google Photo storage. They are also great phones with options for every budget. You can learn more about this report here. With that out of the way, here are the best Google Photos alternatives for those who want to cut the service from their lives for good. Amazon PhotosFor those who have become accustomed to truly unlimited storage, Amazon Photos is an excellent replacement. Even better, you already have if you pay for Amazon Prime.Amazon Photos is basically unlimited cloud storage, but only for photos. You can save 5 GB of videos and other files, but you have to pay for more than that. However, it has some keyword search features. They're not as good as Google, but it's better than nothing. You can also save photos in their original quality. Like Google Photos, the app automatically syncs your photos and you can share them with family members. Unlimited photo storage can be shared with up to six family members on a single subscription. However, if you cancel your Amazon Prime subscription, you will lose access to your photos and may even be permanently deleted. DropboxDropbox is a very popular cloud storage service, and if configured correctly, it can serve as a decent alternative to Google Photos. You can automatically sync all photos from your phone to in the cloud. It also boasts some of the best third-party integrations of any cloud provider. You only get 2GB of storage (compared to 15GB with Google Photos and a few others) and paid plans are significantly more expensive than its competitors. What you get in return are other security and productivity features that may or may not be worth it if all you want to save are photos of your children. FlickrFlickr has been around for a long time, but not everyone knows it offers great plans for storing photos. It's primarily marketed to professional and amateur photographers as a way to host and share high quality photos, but it can be great for everyday users as well. The app offers automatic synchronization of all your photos or individual recordings if you want to save the best pictures. Photos and videos can be set to private to prying eyes from your personal life. Since it is designed for photos from the ground up, keeping everything organized in albums is also a breeze. The free plans offered 1TB of storage, but are now limited to 1,000 photos. If you want unlimited storage, you'll need to get Flickr Pro, which runs \$7 per month (or \$60 a year). Apple iCloud If you have an iPhone, chances are you're already using iCloud. It's as robust a cloud storage tool as Google Drive, if not surpasses it in some cases. iCloud Photos is the part we focus on here, and like Google Photos, it's an easy way to keep all your photos securely stored in the cloud. It doesn't have the same search options, but you can access your photos from virtually any device. Free users are limited to 5GB of storage, but Apple's iCloud offers some of the cheapest expansion plans. 50GB runs just \$1 per month, 200GB runs \$3 a month and 2TB runs just \$10 a month. You can also save money on other subscriptions by linking them together with Apple One.However, if you're not an iPhone user, you'll want to look elsewhere. There is currently no official support for Android phones and it doesn't look like it's coming anytime soon. Some limited features can be accessed through a mobile browser, but they are not offered at nearly the same level of convenience. OneDriveNext is a Microsoft cloud storage solution. OneDrive is a popular choice for business users thanks to integration with Office apps, but it's also a capable replacement for Google Photos. You can download the app to your phone and let it automatically sync photos to the cloud. The gallery allows you to search for and automatically tag images based on their content (as well as Google Photos). The free version is more limited to just 5GB, but you may come across up to 100GB for just \$2 per month. Microsoft 365 users also get 1TB of storage as part of \$7 per per (or \$70 per year). This makes it a natural choice for anyone who uses Microsoft apps for work or personal use. Your own serverThe last alternative to Google Photos is by far the most complex, but the most versatile. Setting up your own cloud server gives you complete control over your files and prevents you from enduring subscriptions for a single service. However, it will take much more time and effort than any other service on the market. To do this, you can use Plex, Synology, OwnCloud or a number of other services, but it will take some technical know-how.
