Epidemiology Research

Epidemiologists study the distribution and determinants of health-related states or events and apply this study to the control of diseases and other health problems. A cornerstone of public health, epidemiology informs policy decisions and evidence-based practice.

Biomedical Informatics Research

Biomedical Informatics—the study of the people, processes, and technology of healthcare—spans the gamut, from patient- and provider-facing technology such as electronic health records, to big data analytics, machine learning, and human-computer interaction.
