Abstract

This article documents the addition of 411 microsatellite marker loci and 15 pairs of Single Nucleotide Polymorphism (SNP) sequencing primers to the Molecular Ecology Resources Database. Loci were developed for the following species: *Acanthopagrus schlegeli*, *Anopheles lesteri*, *Aspergillus clavatus*, *Aspergillus flavus*, *Aspergillus fumigatus*, *Aspergillus oryzae*, *Aspergillus terreus*, *Branchiostoma japonicum*, *Branchiostoma belcheri*, *Colias behrii*, *Coryphopterus personatus*, *Cynoglossus semilaevis*, *Cynoglossus semilaevis*, *Dendrobium officinale*, *Dendrobium officinale*, *Dysoxylum malabaricum*, *Metrioptera roeselii*, *Myrmeciza exsul*, *Ochotona thibetana*, *Neosartorya fischeri*, *Nothofagus pumilio*, *Onychodactylus fischeri*, *Phoenicopterus roseus*, *Salvia officinalis* L., *Scylla paramamosain*, *Silene latifo*, *Sula sula*, and *Vulpes vulpes*. These loci were cross-tested on the following species: *Aspergillus giganteus*, *Colias pelidne*, *Colias interior*, *Colias meadii*, *Colias eurytheme*, *Coryphopterus lipernes*, *Coryphopterus glaucofrenum*, *Coryphopterus eidolon*, *Gnatholepis thompsoni*, *Elacatinus evelynae*, *Dendrobium loddigesii*, *Dendrobium devonianum*, *Dysoxylum binectariferum*, *Nothofagus antarctica*, *Nothofagus dombeyii*, *Nothofagus nervosa*, *Nothofagus obliqua*, *Sula neboxii*, and *Sula variegata*. This article also documents the addition of 39 sequencing primer pairs and 15 allele specific primers or probes for *Paralithodes camtschaticus*.

This article documents the addition of 411 microsatellite marker loci and 39 pairs of Single Nucleotide Polymorphism (SNP) genotyping primers to the Molecular Ecology Resources Database. Table 1 contains information on the focal species, the number of loci developed, any other species the loci were tested in and the accession numbers for the loci in both the Molecular Ecology Resources Database and GenBank. The authors responsible for each

set of loci are listed in the final column. Table 2 presents information on SNP genotyping resources added to the MER database, and presents data on the focal species, the number of sequencing primer pairs, the observed number of SNPs, other species the loci were tested in, and the number of allele specific primers or probes. The MER database and GenBank accession numbers and the authors responsible are also listed. A full description of the development protocol for the loci presented here can be found on the Molecular Ecology Resources Database (<http://tomato.biol.trinity.edu/>).
