INTRODUCTION

Vanderbilt University (VU), located in Nashville, Tennessee, is a private research university offering a full-range of undergraduate, graduate and professional degrees. Vanderbilt is situated on a 330-acre campus near the thriving city center, serving 12,592 students and employing more than 6,000 faculty and staff. The university is accredited by the Commission on Colleges of the Southern Association of Colleges and Schools to award bachelors, masters, education specialists and doctoral degrees, as well as a full range of graduate and professional degrees, including business, law, medicine and nursing.

The Vanderbilt University Counseling Center (UCC) is committed to working with campus and community partners to provide holistic, inclusive, and accessible mental health and prevention services to support the academic and personal success of Vanderbilt’s diverse student community. We promote social justice and an affirming caring culture through our clinical, outreach, consultation, and training services. We know that each student is unique both in terms of their identity and lived experiences, and work with our campus partners to provide a comprehensive pathway of support options for students that are flexible and attentive to each individual’s particular needs, opportunities, and challenges in a spirit of collaboration and mutual respect.

The Postdoctoral Fellowship at the Vanderbilt University Counseling Center (the UCC) is designed to provide advanced training to clinical and counseling psychologists who wish to build a career and assume leadership positions within a fast-paced, multidisciplinary university counseling center setting. The UCC is a large and well utilized counseling center that provides an array of services to both undergraduates and graduate students at Vanderbilt University. Services include individual and group counseling, cognitive and psycho-educational testing, biofeedback, trauma-informed care, outreach, medication management, and crisis response opportunities. Under the supervision of a licensed psychologist,
postdoctoral fellows assume many of the functions and responsibilities of UCC staff and are afforded ongoing opportunities, both formal and informal, for collaboration and consultation with a wide range of mental health providers. Our multidisciplinary staff includes psychologists, psychiatrists, licensed professional counselors, licensed clinical social workers, and psychiatric nurse practitioners who collaborate to develop evidence-based treatment plans by working together with students, our campus partners, and community providers.

All fellowship-related training and clinical services are provided at the University Counseling Center with the exception of outreach opportunities, including Let’s Talk, which typically take place at various sites across the university campus.

Below you will find a more complete description of the postdoctoral fellowship experience, including our training philosophy, training responsibilities, opportunities for working with specific populations and/or treatment modalities, practical considerations of the position, and application information.

The Staff

All training/supervisory staff are licensed psychologists with health service provider designation in the state of Tennessee. Including the Center Director and Training Director, there are nine psychologists involved in the postdoctoral training program representing an array of theoretical orientations, interests, and treatment modalities. UCC psychologists have expertise in psychological assessment and evaluation, Cognitive Behavioral Therapy, Acceptance and Commitment Therapy, Dialectical Behavioral Therapy, psychodynamic psychotherapy, biofeedback, trauma-informed care, and multicultural counseling.

The UCC has full administrative support, including front desk staff and a designated administrative staff person whose job responsibilities include providing support to trainees and to the training director, including communication with fellow applicants, onboarding of fellows into the university, and coordinating training activities. The front desk administrative staff assists UCC all clinical providers with coordination of client care, including scheduling. The UCC Office Manager works collaboratively with the Vanderbilt University Human Resources department to coordinate onboarding and off-boarding processes, along with addressing any paycheck, vacation time, insurance, or other such issues which might come up during the internship year.

The Setting

The Vanderbilt UCC is housed in a 12,000 square foot, two-story building on the Vanderbilt University campus. There is ample space which allows staff and all trainees to have their own offices. Each fellow's office is furnished comfortably and is equipped with a computer, connection to a secure printer, and phone. The UCC also provides tablets to all clinical staff for administration of assessment tools that
interface with the electronic record-keeping system and access to apps that may be
used to support work with clients.

As with all Vanderbilt University buildings, the counseling center is compliant with
the Americans with Disabilities Act and is equipped with handicap accessible
entrances and parking as well as an elevator. Additionally, as for all VU employees,
interns also have access to the VU Office of Equal Employment Opportunity
(https://www.vanderbilt.edu/eeo/) if they have need of accommodations for
disabilities.

TRAINING PHILOSOPHY

The postdoctoral year is one in which the fellow is transitioning from the status of
“student in training” to that of licensed professional. The UCC training staff
recognizes this important developmental transition and seeks to provide an
extensive training experience that both supports and challenges fellows to make
meaningful contributions through their direct clinical service, as well as through
consultation, weekly staff meetings, case conference discussions, outreach
opportunities, and didactic seminars. While fellows function within a training
capacity, they are viewed and approached as valuable members of the clinical staff.
From this perspective, fellows are seen as being early in their career but at an
advanced level in terms of training. Thus, while great emphasis is placed on
assisting fellows in continuing to cultivate their knowledge, skill, and overall
professional identity, they are also expected to serve as colleagues to the clinical and
administrative staff, as well as models of professionalism for the graduate-level
practicum students and doctoral interns who also train at the UCC.

TRAINING OBJECTIVES/COMPETENCIES

The training objectives of the Postdoctoral Fellowship program are aligned with the
profession-wide competencies specified by the APA for practice in health service
psychology. UCC postdoctoral fellowship training objectives include the
development of competence in the following areas:

Professional Values and Attitudes: as evidenced in behavior and comportment
that reflects the values and attitudes of psychology, including reflecting on, critically
evaluating, and improving one’s own professional performance.

Individual and Cultural Diversity: awareness, sensitivity and skills in working
professionally with diverse individuals, groups and communities who represent
various cultural and personal backgrounds and characteristics.

Ethical Legal Standards and Policy: application of ethical principles and
awareness of legal issues regarding the practice of psychology with individuals,
groups, and organizations.
**Research:** ability to critically evaluate, disseminate, and generate research that contributes to the professional knowledge base and/or evaluates the effectiveness of various professional activities.

**Evidence-based Intervention:** ability to provide clinical interventions grounded in science to alleviate suffering and to promote the health and well-being of individuals, groups, and/or organizations.

**Evidence-based Assessment:** develop knowledge and competency in the selection, administration and interpretation of psychological assessments consistent with the best scientific research evidence.

**Evidence-based Supervision:** supervision and training in the professional knowledge base of enhancing and monitoring the professional functioning of others.

**Consultation:** engage in interprofessional and interdisciplinary collaboration to improve client outcomes and quality of care.

**Communication and Interpersonal Skills:** ability to communicate effectively, to interact appropriately, and to develop meaningful and helpful relationships in all professional roles.

**TRAINING GOALS**

Training experiences are grounded in the competencies above to provide advanced training to postdoctoral fellows to:

- perform initial clinical consultations/evaluations
- practice multi-modal psychotherapy (individual and group)
- practice psychology guided by professional ethics and research
- promote development of healthy professional identity
- develop multicultural competency and awareness of human diversity
- develop skills in conducting outreach programs, professional presentations, and interprofessional consultation
- develop skills in professional mentoring

These goals are addressed by a number of training experiences that occur weekly or monthly, including didactic seminars, case conferences, campus outreach presentations, provision of individual and group psychotherapy, participation in individual and group/peer clinical supervision, mentoring of practicum level trainees, and completion of a scholarly project.
FELLOWSHIP OVERVIEW

The fellowship year begins September 15 and runs through August 31 of the following year. The fellowship experience at the Vanderbilt UCC is based on 2000 hours of practice with an expectation of at least 1000 hours of direct clinical service. Fellows gain experience with a variety of direct service activities throughout the year which are described in detail below. Although there is a predetermined set of expectations required to complete fellowship, the degree of involvement in some activities is negotiable and determined by the interest and experience of the fellow, as well as the needs of the UCC. The fellowship position offers a salary of $47,000 paid on a monthly basis. Fellows receive annual sick leave, as well as university holidays and professional development time for activities such as research, job interviews, and conferences. All fellows have a private office with a personal computer linked to the University network, and library privileges. Fellows are also offered medical and dental insurance, as well as other employee benefits.

Learning Activities/Training Curriculum

The primary training method is experiential. The following learning activities are a part of the fellows’ weekly or monthly schedule. Satisfactory completion of these learning activities during the year-long (i.e., 2000 hours) postdoctoral fellowship meets supervised practice requirements for licensure as a Psychologist with Health Service Provider designation in the State of Tennessee.

- Individual and Group Psychotherapy (approximately 20 hours/week)

Fellows provide a wide range of direct clinical service at the UCC, including initial clinical assessment (intake), individual therapy, group therapy paired with a licensed co-facilitator, and crisis care intervention. Through coordination and communication with the fellow and their primary supervisor, care is taken to balance the fellow’s case load with respect to clinical acuity and presenting concerns, and consideration is given to the fellow’s stated interest in working with a specific presenting concern or identity group (e.g., trauma work; international students).

Fellows typically see 18-20 individual psychotherapy clients per week. In addition, each fellow is required to co-facilitate one therapy group with a licensed mental health provider each semester during the academic year, with the option to co-facilitate more than one therapy group if desired and available. Fellows also participate in the weekly crisis care counseling rotation shared among all UCC staff one hour per week. Thus, fellows can expect to accrue at least 1000 hours of direct clinical service over the course of the year.
• Supervision

Individual Supervision of Intervention (weekly x 2 hours)

Over the course of the training year, fellows will have two supervisors of individual therapy, one for each half of the year, with whom they will meet for 2 hours weekly. This supervisor is known as the “Primary Supervisor” because this is the supervisor who has the most frequent and consistent contact with the fellow. All primary supervisors are licensed as psychologists with Health Service Provider designation in the State of Tennessee. Primary supervisors provide regular individual clinical supervision for individual psychotherapy, crisis intervention services and consultation. Primary supervisors also provide training and oversight for case management, documentation, and other administrative activities. Supervision utilizes case discussion and review of video recordings, and supervisors provide fellows with ongoing, formative feedback and summative written evaluations of the fellow's work and progress three times during the training year. The primary supervisor maintains professional responsibility for the fellow’s clinical cases and co-signs all individual therapy notes written by the fellow.

Group Supervision (weekly x 1 hour): supervision of individual therapy in a group format.

The two postdoctoral fellows and the three doctoral interns meet weekly for group supervision of individual therapy supervised by a licensed mental health care professional on staff at the UCC (this responsibility rotates among licensed staff on a weekly basis). Each week during peer/group supervision of individual therapy trainees take turns presenting a clinical case; the supervisor facilitates the discussion of the cases. Utilizing an informal case presentation format, trainees select cases to present and prepare diagnostic and treatment-related questions for their peers. Regular presentation of video recordings of psychotherapy sessions may be used to enhance the clinical presentations. When a non-psychologist licensed staff member facilitates group supervision, the staff member provides information about the fellow's progress to the primary supervisor during regularly scheduled supervisor meetings or informally between meetings. Note that the primary doctoral-level licensed psychologist maintains responsibility for overall supervision, including oversight and integration of supervision provided by other professionals.

Supervision of Group Therapy (weekly x 90 minutes)

Fellows are required to co-facilitate at least one weekly psychotherapy group with a licensed member of the UCC staff. Following each group therapy session, the fellow and licensed staff co-facilitator meet for 30 minutes of face-to-face supervision and discuss the therapeutic group process within the session. The fellow is provided with feedback concerning the therapeutic process and their participation and performance in the group. The supervisor of group therapy provides information
about the fellow’s progress to the primary supervisor during regularly scheduled supervisor meetings as well as informally between meetings. While the group supervisor co-signs all group therapy notes written by the fellow, the primary doctoral-level licensed psychologist maintains responsibility for overall supervision, including oversight and integration of supervision provider by other professionals.

- **Outreach (schedule varies)**

Fellows participate in outreach programming with the larger university community throughout the year. Opportunities for outreach can be coordinated depending on expressed interest in potential work or partnership with various campus partners (e.g., the Office of LGBTQI Life, the Black Cultural Center). Fellows can also facilitate Let’s Talk, a drop-in service that offers informal, confidential consultations at various sites on campus.

- **Advanced Assessment (optional)**

Fellows may opt to provide psychological assessment services during the training year. Advanced training in psychological assessment includes test selection and administration, scoring of instruments and interpretation of results, writing a comprehensive assessment report, and providing a feedback to the client. Supervision of assessment is provided by a licensed psychologist with specific training in assessment.

- **Scholarly Project (dedicated time provided)**

Fellows are expected to contribute to the center through the completion of a scholarly project. Like the clinical training at the UCC, this project is considered to be flexible enough to allow the fellow to pursue particular areas of interest. The ideal project will be grounded in, or informed by, existing research/literature and will be undertaken with the aim of enhancing the clinical, administrative, and/or organizational goals of the center. Outreach program development, group therapy initiatives, organizational assessment, and clinical workshops are only some examples of possible scholarly projects. Fellows and their supervisor will begin to discuss projects ideas at the beginning of the training year, followed by the creation of a more formal and comprehensive outline of the plan, which is ultimately reviewed by the supervisor and UCC Training Director before the project is initiated. There is no set timeline for project completion, but the postdoctoral training year will not be considered successfully completed until the project is brought to fruition. While the Training Director provides oversight of the project and the fellow’s progress, other UCC clinical staff who possess expertise in the area associated with the fellow’s project may assume a mentoring role.
• Postdoc Seminar (monthly x 1 hour)

Postdoctoral fellows participate in a didactic seminar with peers from the in the Vanderbilt University Department of Psychiatry and Behavioral Sciences Postdoctoral Fellowship Training Program in Professional Psychology with which the Vanderbilt UCC maintains a collaborative relationship. This collaborative didactic seminar is co-facilitated by UCC supervisors and psychologists who are faculty members in the Department of Psychiatry, giving fellows opportunities to learn from variety of supervisors who are engaged in clinical service delivery in a number of different clinical settings with a range of diverse clients (e.g., primary care, at-risk youth, first episode psychosis). The Postdoc Seminar includes a breadth of topics touching on the 9 profession-side competencies, including ethics, cultural diversity in practice, professional development and behavior, assessment, intervention, and supervision.

• UCC Multidisciplinary Case Conference (weekly x 1 hour)

The UCC Multidisciplinary Case Conference occurs weekly at the UCC and follows a format in which a UCC staff member presents a clinical case, ideally one that is complex in nature and may require integration of multiple services. This center-wide case conference is an opportunity for staff to solicit clinical consultation from their peers who may represent different disciplines and have different areas of clinical expertise. Fellows participate in this weekly case conference as general attendees and are also included in the schedule of presenters. Case conference presentations are formatted specifically to address presenting concerns within a framework that considers individual and cultural identity and other relevant contextual variables, and typically focuses on treatment planning for brief intervention. Fellows present in the Multidisciplinary Case Conference twice during the training year. No specific rubric for the presentation is required.

• Facilitation of Practicum Seminar (weekly x 1 hour)

During the second half of the postdoc year, fellows take over responsibility for facilitating the case presentation aspect of a weekly seminar held for practicum-level trainees at the UCC. In this role, fellows guide the discussion of cases, highlight issues to consider, and provide suggestions for managing aspects of the cases presented, allowing them to take on a consistent mentoring role for less advanced trainees and to gain experience enhancing and monitoring the professional functioning of others.

Opportunities for Participation on Clinical Teams

The diversity of UCC clientele represents an additional opportunity for fellows to pursue specific clinical interests. UCC clients present with a wide range of concerns and cultural backgrounds. As such, fellows can expect to develop rich caseloads that
vary in terms of complexity and treatment duration. Postdoctoral fellows are challenged to consider the full complexity of the clients they serve and identify not only their clinical needs but also appropriate resources within and outside of the center that will assist clients in achieving their goals.

Much of the intervention work at the Vanderbilt UCC is based on a clinical team model that focuses on treatment of a particular presenting condition (e.g., trauma; alcohol and other drug use) or use of a specific treatment modality (biofeedback; Dialectical Behavioral Therapy, crisis care counseling). Fellows are offered the opportunity to join one or more clinical teams in order to focus their training on a specific presenting condition or treatment modality.

- **Alcohol and Other Drug (AOD) Team**

  The AOD Team is embedded in the general clinic structure of the counseling center. The AOD team provides unique assessment and intervention services to students presenting with clinical concerns regarding use of alcohol or other drugs. Students presenting to the center complete the AUDIT, an alcohol screening tool, ensuring that all clinicians have information related to alcohol use for each student. The team functions as a collaborator with university campus partners, all of whom interface with students struggling with substance use at some level of severity. The AOD Team meets weekly to review referrals and client progress, discuss programmatic issues, and review current literature.

- **Biofeedback Team**

  The Counseling Center utilizes a 5-session Biofeedback protocol as a stand-alone or adjunctive treatment modality. Members of the Biofeedback Team see an average of 300 clients a year, totaling an average of 1300 appointments. At the counseling center, biofeedback is used to reduce symptoms associated with anxiety, depression, PTSD, addictive disorders, stress, and chronic pain.

  The 5-session training focuses on Heart Rate Variability (HRV) and Respiration biofeedback. There is a considerable amount of training in psychophysiology and health psychology before the hands-on training begins. The Biofeedback Team meets monthly to discuss new research in the area and its application to the UCC biofeedback protocol. Due to the investment of time in training to learn biofeedback, fellows opting to join the Biofeedback Team will spent at least one half-day a week providing biofeedback training to clients.

- **Trauma/Acute Care Team (ACT)**

  The Acute Care Team (ACT Team) offers an opportunity to gain experience in intervention addressing campus sexual assault, trauma, and PTSD. The ACT Team provides brief treatment to respond to the needs of students who have
experienced an acute or recent traumatic event or stressor. The ACT team consists of a core group of clinicians that includes doctoral interns, postdoctoral fellows, and staff clinicians who focus on treating traumatic stress. ACT consults are focused on psychoeducation, support, brief therapy, and connecting students with campus resources. Evidence-based protocols for the treatment of trauma are emphasized. The ACT team meets monthly to discuss ongoing cases, review recent literature, and engage in program evaluation of the ACT team.

- **Crisis Care Counseling Team**

Crisis Care Counseling services at the counseling center provide therapeutic support for students in immediate crisis. The clinician works to identify strategies and tools to manage immediate concerns and helps connect the student to other services (on and off campus) that may be useful, including other UCC services. Crisis Care Counseling is offered Monday through Friday during regular UCC operating hours.

Providing Crisis Care Counseling allows fellows to gain experience implementing rapid assessment skills and identifying immediate treatment needs. Sessions in crisis care vary in length and nature depending upon the needs of the student. Many of the sessions are skills-based and require the fellow to develop rapport quickly, provide support and validation, and identify potential safety issues and to balance these with managing distress and implementing a course of action. Fellows build skills in suicide and risk assessment and learn to identify and problem-solve ethical and/or legal issues that need to be considered (e.g., breaking confidentiality to report threats of harm to self or others). Communication and collaboration with campus partners is also a frequent component of crisis care. Fellows choosing to be on the Crisis Care Team will provide 3-5 additional hours of crisis care counseling in addition to the one hour of crisis care coverage required of all staff and trainees.

- **Dialectical Behavior Therapy (DBT) Team**

DBT group therapy is a highly utilized service at the UCC. Participation on the DBT Team provides the opportunity for fellows to either learn DBT skills or gain advanced knowledge of previously learned DBT skills. Fellows participating on the DBT Team attend a weekly DBT Consultation Team meeting, providing the opportunity to enhance consultation skills and work with other team members of various disciplines. These meetings provide an opportunity to present cases and gain supervision and feedback about difficult cases. Further, the DBT Consultation Team is a forum in which one studies DBT therapy in a more in-depth format, strengthening skills in this particular intervention and increasing exposure to the current DBT research literature base.
In addition to learning more about DBT Skills Training, fellows who join the DBT Team have the opportunity to implement what they are learning by co-facilitating a DBT group with senior members of the DBT Team.

Weekly Schedule

Below is an estimated weekly schedule, based on an approximate 40-hour work week.

**MONITORING & EVALUATION OF TRAINEE PROGRESS**

Fellow progress throughout the training year will be monitored and evaluated using a competency-based format that aligns with the stated training objectives and emphasizes acquisition of the profession wide competencies for health service psychology. Clear objective criteria will also be applied for evaluation of achievements (e.g., number of patients seen, number of reports written).

A needs assessment will be completed with each trainee and their primary supervisor, within the first two weeks of training year. The plan will include an assessment of strengths and weaknesses across different areas, along with a plan for meeting training goals. Progress toward achieving these goals will be reviewed.
throughout the year. The primary supervisor and Training Director will monitor the plan regularly to ensure that each trainee is on the right path for success. If any trainee lags in meeting their development plan objectives, the primary supervisor and Training Director will identify barriers to success and adjust the mentorship plan accordingly (e.g., hold meetings with primary supervisor and trainee, recommend additional development activities). Details on the evaluation process are outlined below.

**Evaluation Process**

The fellows will be evaluated three times during the year: December, April, and August. All supervisors of a fellow’s work (i.e., of intervention, assessment, scholarly activities) contribute to the evaluation, which the primary supervisor formally reviews with the fellow. This evaluation is then sent to the Training Director. Each fellow will also complete a written evaluation of his/her supervisors at the same three intervals, which is shared with the Training Director.

It is the responsibility of the training faculty to identify any serious problems or deficiencies as early as possible. Feedback should be given in a timely manner such that low ratings on the formal written evaluation are not the fellow’s first indication of performance that is below the expected level. If the problem is of such severity as to call into question the fellow’s successful completion of the program, the Training Director will be informed, and a written plan will be developed and implemented, in collaboration with the trainee, to remedy the problems according to established due process procedures. Due process procedures ensure that decisions made about trainees by the Vanderbilt University UCC Postdoctoral Fellowship Training Program: are not arbitrary or personally based; require that the fellowship training program identify specific evaluative procedures which are applied to all trainees; and have appropriate appeal procedures available to the trainee so that postdoctoral fellow may challenge the fellowship training program’s action.

**TRAINING STAFF**

**Training Director**

**Frances Niarhos, Ph.D., HSP**

Dr. Frances Niarhos is the UCC Training Director, with primary responsibility for oversight of all training programs at the UCC, including a clinical practicum program for graduate students representing various mental health disciplines (e.g., professional counseling, social work, and clinical/counseling psychology) and an APA accredited internship in health service psychology in addition to the UCC Postdoctoral Fellowship Program. Dr. Niarhos joined the University Counseling Center in 2012 and is a licensed psychologist in the State of Tennessee. She completed her undergraduate degree at Southern Methodist University and received her Ph.D. in Clinical Psychology with a concentration in child and pediatric
psychology from the University of Miami. As part of her degree, she engaged in coursework, research, and practicum experiences specific to psychological assessment. Prior to her tenure at the UCC, Dr. Niarhos was a member of the clinical faculty in the Vanderbilt University Medical Center Department of Pediatrics for 8 years. In both settings, the focus of her clinical work has been the psychological evaluation and diagnosis of neurodevelopmental disorders, acquired brain injury, and psychological disorders affecting cognitive functioning in children, adolescents and young adults.

As Training Director, Dr. Niarhos maintains primary responsibility for directing and organizing the postdoctoral fellowship training program, including monitoring and evaluating the training program’s goals and activities and documenting and maintaining fellow training records.

Training Faculty

The following individuals are actively involved in the training of postdoctoral fellows as supervisors, mentors, and administrators.

**Todd Weinman**, Psy.D., HSP  
University Counseling Center Director  
**Interests**: leadership and management in college health; training and supervision, diversity and social justice; brief counseling approaches; male identity and healthy masculinity; and Positive Psychology

**Adriana Kipper-Smith**, PhD, HSP  
Clinical Director  
**Interests**: Psychodynamic psychotherapy, biofeedback; multicultural issues

**Mary Clare Champion**, Ph.D., HSP  
Staff Psychologist, Practicum Coordinator  
**Interests**: Women’s health; health psychology; supervision/student development; individual psychotherapy

**Nalini Connor**, Ph.D., HSP  
Staff Psychologist, Biofeedback Team Lead  
**Interests**: Interpersonal/relationship problems; depression; anxiety; identity issues; and clinical supervision. Psychotherapy orientation is integrative, primarily using CBT, interpersonal-focused therapy, and insight oriented therapy

**Melissa Porter**, Psy.D., HSP  
Staff Psychologist, Clinical Coordinator and Crisis Care Team Lead  
**Interests**: Individual, group, and family therapy regarding women’s issues; trauma; adjustment issues; depression; assessments; crisis assistance; interventions predominately utilize CBT, trauma focused CBT, and supportive therapy along with EMDR
Anabella Pavon Wilson, Ph.D., HSP
Staff Psychologist
Interests: Individual, group, and family therapy; adjustment issues; identity development; multicultural issues; anxiety and depression; predominately utilizing CBT, DBT, and supportive therapies

Elizabeth Bowen, Psy.D., HSP
Staff Psychologist, Trauma Team Lead
Interests: Trauma, identity, relationships, mood disorders, sport & performance psychology, group therapy; psychotherapy orientation is integrative, primarily using psychodynamic, interpersonal, and client centered approaches

Ciera Scott, PhD, HSP
Staff Psychologist, Liaison to Graduate and Professional Schools
Interests: diversity and multiculturalism, individual and cultural identity issues, group psychotherapy, and outreach and education

COMPLETION OF THE PROGRAM

Upon successful completion of the program, fellows will be awarded a certificate of completion. This certificate will validate that the trainee has successfully completed all the program requirements and has acquired expertise in the field of health service psychology. This certificate will be awarded after final evaluation by the Training Committee.

POSTDOCTORAL FELLOW SELECTION CRITERIA

Fellows are selected on a competitive basis based upon previous clinical experience, recommendations from supervising professionals, and fit between applicants’ experience and interests with the services provided by the University Counseling Center. Applications are reviewed by the Training Director and two additional UCC psychologists, who then select a smaller group of applicants to interview (in person or over Skype). The Training Director is responsible for the selection of fellows and does so in consultation with the UCC psychologists involved in application reviews and applicant interviews. Prior to the start of the fellowship, fellows must have completed all clinical psychology doctoral degree requirements from an APA/CPA-accredited graduate program, as well as an APA/CPA accredited doctoral internship.

FURTHER INFORMATION AND TO APPLY

For further information or for informal inquiries, please contact Frances Niarhos, Ph.D., HSP at frances.niarhos@vanderbilt.edu or (615) 322-2571 with any questions related to the postdoctoral fellowship position. To apply for the position, please submit an application, including a CV, letter of interest, and two letters of recommendation (at least one from applicant’s internship site) through APPIC’s
Centralized Postdoctoral Application System (APPA CAS) at https://portal.appicpostdoc.org

The deadline for completed applications is December 21, 2018 at 5pm.

**Number of Positions:** 2
