

COMPANY PROFILE

Concrete Recycling,

cri-utah.com

ABOUT

In the Fall of 2000, Kelly Kim of Impact Demolition set out to find a better way of disposing of concrete and asphalt from various demolition projects his company was conducting. Unsatisfied with high prices and the environmental impact of local disposal options, Kelly began researching construction recycling technology which was prevalent out East. By the Spring of 2001 Kelly aquired the financing and equipment necessary to open Concrete Recycling, Inc. (CRI) - a deep-discount alternative to traditional construction waste disposal. Opening its doors to everyone, CRI invites you to enjoy the great prices, clean products and quality service of Utah's construction recycling experts.
