A B O U T

Welcome to DP Electronic Recycling; where ingenuity, quality and integrity meet environmentally sound solutions to e-waste recycling and disposal. DP Electronic Recycling is a full service electronic recycler located in Wisconsin. We specialize in end-of-life recycling (e-waste), asset management, data destruction and electronic purchasing options. Electronic waste (e-waste) is a growing pandemic that affects all levels of our global community. We are living in an age where the manufacturing, extensive use and subsequent discarding of electronic equipment and devices are commonplace. The hazardous and valuable materials contained in these electronic devices, when not properly disposed of, will continue to pollute and consume our environment for generations to come. It is our obligation as responsible individuals and businesses to utilize environmentally friendly and ethical resolutions to the problem of e-waste. DP was created to solve problems with recycling. We use technology and innovation to find ways to create environmentally safe ways to process electronics. All data destruction processes conform to the guidelines established by the National Institute of Standards and Technology NIST SP 800-88 Special Publication 1. DP Electronic Recycling offers a variety of professional data destruction services to fit both the individual and business needs. **Software Destruction** We take the handling of your data very serious and have very strict guidelines in regards to media sanitation. All data destruction processes used by DP Electronic Recycling are in accordance with NIST Special Publication 800-88 Revision 1, entitled Guidelines for Media Sanitation. **Degaussing** The media will be degaussed rendering it totally non-operational. After degaussing, it is physically shredded. **Physical Destruction** The media is shredded to sizes established by the above standards. **Mobile Data Destruction** We also offer Mobile Data Destruction services with full degaussing, shredding and reporting capabilities at your facility. DP Electronic Recycling is a full service electronic recycling company offering environmentally sound solutions to e-waste recycling. All hazardous materials contained

in electronic devices are extracted in a contained and environmentally safe manner and disposed of properly. Recoverable materials are then removed, sorted and resorted as commodities. These commodities are then recycled and made into different products. This is an important stage in recycling aids in the steps toward reducing the consumption of our natural resources. Some of the materials that can be recovered through e-waste recycling are precious metals such as, gold, silver, palladium, copper, aluminum and steel. We follow the Waste Management Hierarchy of responsible recycling set forth in the e-Stewards Standard. The hierarchy is a three-tiered approach starting with the most preferred method to the least preferred method. Invest in the protection and future of our environment when you properly dispose of e-waste. E-waste should be removed from traditional landfills due to potentially hazardous materials. DP will do a full evaluation of your current program and assess for any improvements that can be made and how we can improve upon your current program. Thus creating completely customizable programs for you and services that are needed by your organization to create a win-win for both parties. We strive to relieve your pain points in your current program and have documented processes for all of our processes to ensure that everything is handled the same way every time it is sent to DP. If you are a large bank, insurance company, automobile dealership, hospital, health care facility or large company handling sensitive data including credit card information, the laws surrounding the protection of sensitive data and the resulting fines for non-compliance are staggering. HIPAA fines alone can run into the millions of dollars. We have the "state of the art" data destruction equipment to assist your company with the appropriate data destruction solutions. If you haven't established clear rules and regulations for data destruction you may be at risk for catastrophic breaches and subsequent fines. **MOBILE UNIT SERVICE:** A DP Electronic Recycling uniformed professional will arrive on site at a prearranged time. The data will be destroyed and the media device will be rendered useless. The entire process will take place in a secure environment on board our truck. You are encouraged to observe the destruction process and we video tape the destruction upon request. Afterwards, we provide a **CERTIFICATE OF DESTRUCTION** (with serial numbers) for your records.
