ABOUT

Glass Cycle Systems, Inc. is the only company with a unique and practical system to remove and recycle your empty bottles. Our efficiently designed glass crusher granulates bottles INSTANTLY as they come off your bar. We supply the equipment and containers needed for you to recycle your glass bottles. We also maintain the glass crusher equipment. We COME TO YOU to pick up your glass. Glass recycling is the process of turning waste glass into usable products. Depending on the end use, this commonly includes separating it into different colors. Glass makes up a large component of household and industrial waste due to its weight and density. The glass component in municipal waste is usually made up of bottles, broken glassware, light bulbs and other items. Glass recycling uses less energy than manufacturing glass from sand, lime and soda. Every tonne of glass used for producing new glass items saves 315kg of carbon dioxide. Glass that is crushed and ready to be remelted is called Cullet. The term "cullet" derives from the practice of remelting flawed containers which have been "culled" from production lines.
