

COMPANY PROFILE

JSA Environmental

jsaenvironmental.com**ABOUT**

JSA Civil Home JSA Environmental, Inc. (JSA) was founded by JW Spear, Sr. SC P.E. (JW), in June of 1997, as a sole proprietorship for the purpose of providing engineering and planning services addressing solid and hazardous waste management issues. Our first assignments were with Solid Waste Districts in Indiana, a Virginia landfill in which our founder had had a relationship since 1988, and the City of Muskegon, Wisconsin. We earned repeat assignments and new clients through unsolicited recommendations from JSA Environmental is a small company specializing in solid waste management and water resources management issues. To keep food on the table, we also do general environmental, including Phase I, Phase II environmental assessments and real estate remediation, recycling, and reuse. JSA services are available to all, but the majority of our clients are Municipalities, smaller Government bodies, private groups (home owner associations and the like), and individuals. We provide our clients with technical expertise in the realm of Solid Waste. We have reviewed landfill design, operations, ongoing site auditing, etc. In the realm of surface water, JSA focuses on zero discharge design. Water that falls upon a subject site is managed for on site use, both active and passive, along with aiding in aquifer recharge and reducing impact to the watershed. As you might imagine, we have a surprising environmental forensic practice, supporting environmental engineers in a host of projects in our field.
