

COMPANY PROFILE

Valley Girl Recycling

valleygirlrecycling.com

A B O U T

Valley Recycling, Inc is the premier recycling company in South King County, located in Pacific, Washington just off of Highway 167. In addition to our community recycling drop center we also provide turnkey recycling solutions for the collection and purchase of recyclable materials for small to large companies in the greater Puget Sound region. We have enjoyed a sterling reputation in our community for our integrity, service and competitive prices. We specialize in, Ferrous and Non-Ferrous Scrap Metals, Electronic Waste, Batteries, Insulated Wire, and CDL. See our frequently asked questions page for more specifics on each item and how to get the most out of your recycled materials. We provide a whole host of services aimed at helping Washington businesses get the most out of their recycling needs. These services include; Scrap Sorting, Demolition, Site Clean Up, Roll-Off Containers for scrap metal collection, Roll-Off Containers for CDL and other construction debris, Trucking, and On Site Consulting Services. CDL Services CDL refers to construction debris and land clearing. See CDL FAQs for details. We offer roll off services for your demolition, construction and site development with bin sizes available. The most common metals to consider when discussing recycling are aluminum (Al) and steel. Some other metals—like Au, Ag, brass, and Cu—are so valuable that they are rarely thrown away. The most common metals to consider when discussing recycling are aluminum (Al) and steel. Some other metals—like Au, Ag, brass, and Cu—are so valuable that they are rarely thrown away. They do not create a waste disposal problem. Aluminum and steel do. Americans use 100 million steel cans and 200 million aluminum beverage cans every day (300,000,000 metal cans). What should we do with this metal waste? Should we burn it in waste-to-energy plant? Should we landfill it? Or should we recycle it? After source reduction (using less aluminum to make a can, for example), recycling is the most efficient way to reduce aluminum and steel waste. Unlike paper and plastics, burning metal trash in waste-to-energy plants creates no energy. Instead, aluminum melts and steel just gets very hot. Magnets can be used to collect steel scrap

at waste-to-energy plants, though, and then the scrap can be shipped to steel plants for recycling. Landfilling is usually not a good alternative either. Aluminum, in particular, is so valuable as a scrap material that it simply does not make sense to bury it. this saves 155% of energy and 95% of air pollution Scrap metal includes ferrous metals (iron and steel) and nonferrous materials (Al, Cu, Sn, brass). Many of our home appliances are made of metals. This includes our washers & dryers, refrigerators, ovens & stoves and water heaters. Waste from unwanted appliances can be categorized in two main types: refrigerants (Freon) and non-refrigerants. Valley Recycling believes not only in the importance of companies “going green”, but also in the importance of education for individuals and companies on how to make the most money from your recycling. If you are interested in learning more about recycling and educating your employees, Valley Recycling will send out an on-site metal consultant to do a walk through of your facility in order to determine what materials you have and teach you how to best sort and clean your metals. As a part of this service we will also determine what type of bins and equipment you will need from us in order to make this process simple and beneficial. Valley recycling will pick up all metals and pay you on terms that work best for your company. There are several benefits to using this service such as education, extra money and pride in the fact that your company is supporting a cleaner, greener environment. For more information in regards to this service or any other service that might benefit your company please feel out our request a quote page and someone from our company will contact you within 24 hours.
