

Plant Expansion at Wellborn Cabinet

Construction of 100,000+ square foot facility

Wellborn Cabinet has completed the construction of a 300' by 350' (105,000 square feet) rough mill lumber processing facility located on-site at the Ashland, Alabama plant. This addition allows for Wellborn Cabinet to effectively double the capacity of the current rough milling process.

Constructed and Filled with American-made Equipment

The concrete used to build the flooring and walls was made on-site. The machinery used to help erect and construct the building were all machinery partners who are committed to being "Made in USA". The steel structure and light bulbs were all from American-made manufacturers. Inside the 105,000 sq. ft. facility will be all American-made lumber processing equipment and conveyors. Planer mills, rip systems, and saws are all made by American equipment manufacturers.

The American Kitchen Cabinet Alliance has won the largest trade case in United States history against China. Learn more about the Interactional Trade Commission's unanimous decision [here](#).
