## Reverse image search google mobile android

Google Image Search has pushed out a nice update for iPhone and Android users, including image browsing with swipe and content type filter, including quick access to that terrible safe search shutdown. Try and enjoy easy-to-access images with quick mobile search. [Google Mobile Blog] Google Android 4.1 Jelly Bean release is choking full of sweet features. Perhaps the most noteworthy addition, though, is a scrumptious little what is called Voice Search. Voice Search allows you to control your Android phone or tablet by speaking out loud (kind of like Siri, yes – except this technology actually works). This is an extension of Google Voice Action feature, which android existed since 2010.15 best Android controllers What google new voice search? Many. Here are 15 categories of tasks worth trying out on your Jelly Bean device. Among them you will find examples of a whopping 70-plus queries that will help you achieve great results. So pull your phone or tablet, clean your throat and get ready: it's time to start talking. (You can access voice search on any Android 4.1 device by tapping the microphone icon on the home screen or android search tool. Alternatively, you can tell Google from the search tool or from Google Now to start your voice search right away and start listening.) Slide show: 7 Free Siri alternatives to Android Weather One of google's most basic but useful features of google's new Jelly Bean Voice Search is the weather. You can ask your device for forecast details in almost any way you want. For example, tell me will it rain this weekend? and a voice search will respond by showing the weekend forecast for your area by reading the most important things. Tell me what the weather is in San Francisco? and voice search will show the forecast of the city by speaking the information aloud. Some other weather-related queries to try: How hot will it be on Sunday? When will it continue to rain?. Do I need an umbrella today? The possibilities are almost endless. Restaurants and businesses in an unfamiliar area? Start a Google Voice search and let it help. Some types of queries that can be useful: What is a good Thai place next to me? Where's the museum?. Where's the nearest bowling alley? In most cases, voice search will display a map-based list of options; then you can tap anywhere to get local details and directions. If the answer to your question is not related to the choice - there will be only one bowling club, for example - the system will automatically start the direction. Sports Google Android 4.1 Voice Search can do many things related to sports. If you want scores or information about the latest or future games, you're lucky: Ask your device When next Game? and he shall show you the schedule with an answer, and tells aloud Details. Ask: What was the result of the Cardinals game last night? and you will see and hear the statistics. Ask Will the Marlins win their last game? and you will get a visual response along with the spoken one. Voice search will always give you the opportunity to learn more as well: sports graphics have directions to jump directly into the game recaps and events. With any voice search command, you can also scroll down after a organized response to see a list of standard web search results. Music Yes have been around android for some time, but it is still a winner: When you have a hankering to hear some specific tunes, just tap the device's microphone key and tell your phone or tablet what you want. You can use the band name -- Listen to the Beatles - or you can ask for a specific song: Listen I Am the Walrus. Whatever you say, Voice Search will pop up a list of places where music can be played, the default Play Music app with YouTube and third-party apps like Pandora, and let you choose the app you want to use. Messaging Other oldie-but-goodie is Google's voice-driven messaging feature. It can work in several different ways. You can send text to someone by saying Send text, followed by the person's name and the message you want to send. Voice search will collapse the card with the person's name and photo along with the content of the message you have made; you can edit the message or tap once to confirm that it is correct. You can send an e-mail message to a person using a similar setup: just tell Send an e-mail message, then send a person's name and message. If you want to get fancy, you can use phrases on the subject and body to fill out the entire letter (e.g. Send text to mom, theme hello, body Like you do today?). Want to mark yourself? No problem: Tell yourself and then what it is that you want to remember. Voice Search will compose you an email using your default Gmail account on your device, using both the overwritten message text and the voice audio attachment. Reminders If sending notes for yourself is not enough, Google Voice Search can also set alarms or reminders for everything you need. A few examples: Remind me to get mail within two hours Wake me up at 7am.m tomorrow Cutting tomorrow 2 Data and time Google Android 4.1 Voice Search can provide a whole lot of data and time related details. Try searches like: What time is it in London? What time zone is Milwaukee?. When will the sunset be tonight?. When is sunrise in Australia?. When is Father's Day? Flights If you or someone you know is traveling, jelly bean voice search tool applies to you. You can just tell the airline and the flight number - United 465, for example - and the voice search will show and tell flight status. You can ask a more detailed question, such as when does American Airlines flight 1 arrive? 1? Google will pop up graphics with all the flight information, speaking loudly in the most important bits. You can even just ask if a particular flight is on time, if that's all you want to know. Stocks Watching the stock market? Try asking your Android 4.1 device to update your investment. The easiest way to get stock updates is to press the device's microphone button and tell you the letters in your curious stock code. For example, say G-O-O-G, and voice search will show the current google stock status schedule when reading the trading level aloud. You can also tell Google stock or ask a question like What Google stock is trading today?, to get the same kind of information. Conversions and calculations Consomay your formulas and calculators: Google Jelly Bean Voice Search is ready and willing to do all the dirty work for you. The system can handle most of any math-related questions you throw your way - queries like: What is 5,812 times in 247? What is 19.4 percent of the 240.37? What is 14 inches in millimeters? What is 12 hexadecimal? What is USD 78 in EUROS? Just remember to say thank you. Phone calls It's easy to forget that these great little computers, which we all carry, are actually phones. But when you need to make a call, do not be afraid: the search for a voice has its back. You can tell you to make a call and specify the name of any person on your contact list so that the system calls you; if you have more than one person's stored number, you can tell the type of number you want - mobile, home, or work - after the person's name to indicate which record should be used. You can also search for voice search and dial any number you need. For example, you can tell Call McDonald's on Third Street or Call the Hilton in Downtown Chicago. Directions Android native navigation system is fully integrated with Jelly Bean Voice Search. Just tell your tablet or phone where you need to go, and get that specific one as you want: Go to 123 South Main Street Take me to Bank of America by foot Where is the nearest Burger King? Go to Wal-Mart by public transport [Not recommended] Celebrities Voice Search can snag all information about known people. Try queries like these to get quick and simple answers: What's PayPal? Who directed The Dark Knight Rises? What are the most scrubs? Where does Jerry Seinfeld go to college? Where was Jimmy Fallon?. How much is Mark Zuckerberg worth? When did John Lennon die?. How did John Lennon die?. What was Marilyn Monroe's real name? What films was Scarlett Johansson in? How tall is Scarlett Johansson? How old is Scarlett Johansson? Why is JR Raphael so obsessed with Scarlett Johansson? (Note: The last one may or may not work.) you want to see pictures of something fast. Voice Search is a great place to rotate. Just say what you want to see -- photos photos The Statue of Liberty, or, I don't know, Scarlett Johansson - and it will help you with a collection of images faster than you can say sad, sad Siri. Answers Still it's more voice search action? Try some of the following question options: What is the definition of taco? What are some synonyms smelly? Who is general electric CEO? Who is Marissa Mayer married? Who wrote the Bonfires of Heaven? What are the dimensions of the Starry Night? When was the first episode of Cheers? What theme song friends? How Long Does The Dark Knight Rises? What is city code 323? How long is the Golden Gate Bridge? What's the height requirement for the Incredible Hulk roller? What is HP's motto? How far is the moon? What's the temperature of the sun? What's the lone number? What is the answer to life, the universe and everything? If that last one doesn't cover all the basics, I don't know what he's doing. JR Raphael is an Android Power blog author and fan of talking to dead objects. Follow him on Google+, Twitter or Facebook to get more Android tips.
