Digital connectivity has never been more fundamental for businesses
Introducing WiredScore

WiredScore is the global digital connectivity certification that evaluates, improves, benchmarks and promotes best-in-class connectivity in the built world.

800+ million
sq ft of real estate is certified by WiredScore

8+ million
people work in WiredScore certified buildings

What is the certification process?

1
Audit
Understand the digital infrastructure and connectivity capability of the building or development from the WiredScore audit and review.

2
Pre-certify
Announce to the market you are undertaking the certification.

3
Improve
Receive expert guidance on how to improve the asset.

4
Certify
Align and benchmark the building with one of WiredScore's globally recognized ratings.

5
Promote
Communicate the building's connectivity and WiredScore certification level to the market.

6
Utlize
Receive independent and objective technical guidance and training throughout the certification period.

What do WiredScore measure in buildings?

Resilience
Are potential outages mitigated through resilient infrastructure? Is the critical telecommunications equipment secure?

Occupier experience
Does the building provide occupiers with a seamless digital connectivity experience?

Mobile
Is the occupier experience in the building enhanced by access to uninterrupted mobile coverage?

Choice of providers
Do multiple high-speed fibre providers service the building and provide competitive pricing?

Future-readiness
Is there flexibility and capacity to adapt to new and advancing technologies?

WiredScore certification levels

WiredScore's rating system is formed of the most cutting-edge criteria, developed from learnings from over 800 million square feet of WiredScore certified properties.
